Helpful [list from FDA](#), found while doing research and organizing my files on:

1. Public Health Emergency (PHE), Emergency Use Authorization (EUA) and PREP Act notices, declarations, determinations and authorizations issued by HHS Secretaries and their delegees from Jan. 2020 to the present;
2. Legal advisory opinions about PREP Act liability immunity, issued by the HHS Office of General Counsel from Jan. 2020 to the present; and
3. Guidance to pharmacists about PREP Act liability immunity, issued by the Office of the Assistant Secretary of Health, from Jan. 2020 to the present; and

May biochemical weapon uptake rates approach zero in coming months and years, as rational popular response to the truth rendered much more visible since January 2020, and in firm opposition to all “recommendations” of the CDC Advisory Committee on Immunization Practices (ACIP).

Biochemical weapons deployed by injection have been

intrinsically injurious from the start of government campaigns promoting their use more than a century ago.

The “Covid-19” weapons have been the most deadly to date, with some lots deadlier than others, and contents of many lots still unidentified.

The US military is now incorporating more toxic compounds into each new batch churned out by the biomunitions production lines, added to the [list of FDA-endorsed bioweapons](#), and [recommended by the members of the CDC-ACIP](#) for use on military targets.
