

All-Cause Mortality Data Strongly Suggests No Viral Outbreak in 2020 | Absolutely No Evidence of a Covid Pandemic

[All-Cause Mortality Data Strongly Suggests No Viral Outbreak in 2020](#)

All-cause mortality is the most accurate data, and it shows absolutely no evidence of a Covid pandemic.

August 27, 2022

All-cause mortality is the most accurate and most reliable scientific data for analysing the “[Covid pandemic](#)” because it doesn’t discriminate and it has no bias. After all, a death is a death.

When time, age, and region, are used as additional variables, the [correlations](#) become (nearly) bulletproof.

Another Mic-Drop Study

Denis Rancourt previously co-authored a huge paper and [spoke about it on my podcast](#), in which they concluded that all-cause mortality data shows no viral outbreak in 2020. He has co-authored yet another paper, [COVID-Period Mass Vaccination Campaign and Public Health Disaster in the USA](#), which can be downloaded below.

COVID-Period Mass Vaccination Campaign and Public Health Disaster in the USA

From age/state-resolved all-cause mortality by time,
age-resolved vaccine delivery by time, and socio-geo-economic data

Denis G. Rancourt^{1,2,*}, PhD, Marine Baudin³, PhD, Jérémie Mercier³, PhD

[Download PDF](#)

For a detailed breakdown of the study, I recommend watching [the presentation](#) conducted by Denis and his co-authors (Marine Baudin and Jérémie Mercier). Their research includes “vaccination” data.

Our Conversation

For a simpler breakdown of the study, I recommend watching my conversation with Denis, in which he explains everything in layman’s language, and throws in some [eye-opening geopolitics](#) for good measure.

Basically, [COVID-19 isn’t real](#).
