"Smart" devices and wearables collect data often without the user's knowledge or consent so manufacturers can sell it to 3rd parties (see [1](#), [2](#), [3](#), [4](#)).

All wireless "Smart" [devices](#) and wearables – activity trackers (see [1](#), [2](#)), [ear buds](#), [glasses](#), etc. – also emit harmful electromagnetic radiation which can make people and animals sick (see [1](#), [2](#), [3](#), [4](#), [5](#), [6](#), [7](#), [8](#), [9](#)) AND increase their cancer risk (see [1](#), [2](#), [3](#), [4](#), [5](#)).

Research has determined that wireless exposure can even disrupt the blood-brain barrier, cause it to leak, and kill brain cells (see [1](#), [2](#)). Nevertheless, Amazon is introducing a new activity tracker that focuses solely on fitness and health. Oh the irony.

Amazon unveils Halo to battle Apple Watch and Fitbit – tracks activity, body fat, emotions

Key Points

- Amazon has introduced a wristband for health and fitness tracking called Halo, alongside a subscription service and smartphone app.
- It brings some new offerings, including technology to track people's body fat percentages, sleep temperature and their emotional state.
- It's Amazon's first significant move into wearables, which Gartner estimates will be a \$52 billion market this year.
