by [Ricardo Delgado](#) and [Prof Michel Chossudovsky](#)

July 17, 2021

*We bring to the attention of Global Research readers this important interview with **Ricardo Delgado Martin**, Founder and Director of **Quinta Columna**. Ricardo is responsible for coordinating the Spanish research team's analysis of the impacts of graphene oxide nano-particles contained in the vial of the mRNA vaccine.*

The results of their analysis by electron microscopy and spectroscopy are far-reaching. Graphene oxide is a toxin which triggers thrombi and blood coagulation. It also has an impact on the immune system. Graphene oxide accumulated in the lungs can have devastating impacts.

The results of the Spanish study suggest, yet to be fully confirmed, that the recorded vaccine related deaths and "adverse events" (e.g. published in the US by the CDC and in the EU) are attributable to the presence of graphene oxide nano-particles contained in the Covid vaccine vial.

Of significance, (acknowledged by national health authorities) graphene oxide is also contained in [the face mask](#).

Graphene has electromagnetic properties which have been detected in people who have been vaccinated. These effects have been amply documented and confirmed. See the study conducted by the [European Forum for Vaccine Vigilance](#)

Ricardo Delgado Martin is specialized in biostatistics, clinical microbiology, clinical genetics and immunology.

For further details on this project see the report by **Prof. Dr. Pablo Campra Madrid**, specialized in Chemistry and Biology, Escuela Superior de Ingeniería, University of Almería.

[See summary of their report](#) entitled **Graphene Oxide Detection in Aqueous Suspension, Observational study in Optical and Electron Microscopy.**

[Full Study \(English\)](#)

There is evidence that the Covid-19 “vaccine” which contains graphene oxide has resulted in a pattern of deaths and injuries Worldwide.

Speaking on behalf of the Spanish research team, Ricardo Delgado Martin recommends that the covid-19 experimental mRNA vaccine should be cancelled and discontinued immediately.

Confirmed by Health Canada, **Graphene-Oxide particles are also contained in the Face Mask** which is intended to protect you.

[Face Masks Contain Graphene, A Poisonous Substance](#) by [Prof Michel Chossudovsky](#), July 14, 2021

“The wearing of the face mask started in the immediate wake of the covid-19 lockdown on March 11, 2020. Worldwide, people have been instructed to wear the mask for more than a year.

And then one year later, we are told that in some cases it may contain a poisonous substance.

According to Health Canada: “There is a potential that wearers could inhale graphene particles from some masks, which may pose health risks.””

[Safety Concerns](#) by [Andrew Maynard](#), July 12, 2021

“Given all that we know about the pulmonary toxicity of engineered nanoparticles, and the uncertainty over the inhalation risks of graphene, surely someone should have asked this question when developing graphene-containing masks.

When airborne nanoparticles are inhaled and penetrate to the lower regions of the lungs (the alveolar region), they can elicit a response that’s [more closely associated with the number or surface area of the particles](#) than their mass. And because of this, very small quantities of material have the potential to cause a lot of harm – much more than you might imagine from the mass of material alone.”

Graphene Oxide has electromagnetic properties which have been detected in people who have been vaccinated.
