I mean, it's terrible. A person won't take a vaccine or drug after a doctor tells him to? Arrest the non-compliant resisting son of a bitch. Lock him up. The doctor knows best. People make things so complicated. I just don't get it.

We have experts. They're called experts for a reason.

Your car breaks down. Who are you going to take it to? A florist?

A professor at a medical school says the COVID vaccines are safe and effective. Are you going to ask a podcaster whether he agrees?

You want to know medical truth? Do you read a fishing magazine? You read a medical journal. What's happened to education in this country?

Oh...

Hold on.

Wait.

I just came across something.

July 26, 2000, Journal of the American Medical Association; author, Dr. Barbara Starfield, public health expert at the Johns Hopkins School of Public Health; *"Is US health really the best in the world?"*

Starfield reported that the US medical system kills 225,000 Americans per year. 106,000 as a result of FDA-approved medical drugs, and 119,000 as a result of mistreatment and errors in hospitals. Extrapolate the numbers to a decade: that's 2.25 million deaths.

Here's something else:

Journal of the American Medical Association, April 15, 1998: *"Incidence of Adverse Drug Reactions in Hospitalized Patients."*

The authors, led by Jason Lazarou, culled 39 previous studies on patients in hospitals. These patients, who received drugs in hospitals, or were admitted to hospitals because they were suffering from the drugs doctors had given them, met the following fate:

Every year, in the US, between 76,000 and 137,000 hospitalized patients die as a direct result of the drugs.

Beyond that, every year 2.2 million hospitalized patients experience serious adverse reactions to the drugs.

The authors write: "...Our study on ADRs [Adverse Drug Reactions], which excludes medication errors, had a different objective: to show that there are a large number of ADRs even when the drugs are properly prescribed and administered."

This study had nothing to do with doctor errors, nurse errors, or improper combining of drugs. And it only counted people

killed or maimed who were admitted to hospitals. It didn't begin to tally the people taking pharmaceuticals who died as consequence of the drugs, at home.

Here's something else:

BMJ June 7, 2012 (BMJ 2012:344:e3989). Author, Jeanne Lenzer. Lenzer refers to a report by the Institute for Safe Medication Practices: "It [the Institute] calculated that in 2011 prescription drugs were associated with two to four million people in the US experiencing 'serious, disabling, or fatal injuries, including 128,000 deaths.'"

The report called this "one of the most significant perils to humans resulting from human activity."

The report was compiled by outside researchers who went into the FDA's own database of "serious adverse [medical-drug] events."

Therefore, to say the FDA isn't aware of this finding would be incorrect. And the FDA certifies, as safe and effective, all medical drugs (and vaccines) before they can be released for public use.

Here's something else:

"The Epidemic of Sickness and Death from Prescription Drugs." The author is Donald Light, who teaches at Rowan University, and was the 2013 recipient of ASA's [American Sociological Association's] Distinguished Career Award for the Practice of Sociology. Light is a founding fellow of the Center for Bioethics at the University of Pennsylvania. In 2013, he was a fellow at the Edmond J. Safra Center for Ethics at Harvard. He is a Lokey Visiting Professor at Stanford University.

Donald Light: "Epidemiologically, appropriately prescribed, prescription drugs are the fourth leading cause of death, tied

with stroke at about 2,460 deaths each week in the United States. About 330,000 patients die each year from prescription drugs in the United States and Europe. They [the drugs] cause an epidemic of about 20 times more hospitalizations [6.6 million annually], as well as falls, road accidents, and [annually] about 80 million medically minor problems such as pains, discomforts, and dysfunctions that hobble productivity or the ability to care for others. Deaths and adverse effects from overmedication, errors, and self-medication would increase these figures.” (ASA publication, “Footnotes,” November 2014)

None of the above reports factor in death or injury by vaccine.

Given the reports on medically caused death and maiming I’ve just cited and described, it’s obvious that...

Leading medical journals around the world, which routinely publish glowing accounts of clinical trials of medical drugs...

Are spilling over with rank fraud, on page after page.

Indeed, here is a stunning quote from an editor who has quite probably read and analyzed more medical-drug studies than any other doctor in the world:

“It is simply no longer possible to believe much of the clinical research that is published, or to rely on the judgment of trusted physicians or authoritative medical guidelines. I take no pleasure in this conclusion, which I reached slowly and reluctantly over my two decades as an editor of *The New England Journal of Medicine*.” (Dr. Marcia Angell, *NY Review of Books*, January 15, 2009, “*Drug Companies & Doctors: A Story of Corruption*”)

Compare that quote with one from Anthony Fauci. In an interview with the *National Geographic*, Fauci stated: “Anybody can claim to be an expert even when they have no idea what

they're talking about...If something is published in places like New England Journal of Medicine, Science, Nature, Cell, or JAMA—you know, generally that is quite well peer-reviewed because the editors and the editorial staff of those journals really take things very seriously.”

Uh-huh. Of course. Right.

Given these mainstream reports of what amounts to a holocaust I've cited and described in this piece...

...You would think the federal government must have launched a major operation, many years ago...

...To reconstruct, from the ground up, the US medical system, so that it's no longer killing and maiming SO MANY people, on and on and on.

But you would be wrong.

Of course, you MUST believe what the impeccable doctors are telling you about COVID; and you must follow the politicians' orders, because the politicians are taking their cues from the doctors.

Right?

Right?
