

As I Warned: RNA Gold Rush; New Genetic Products in the Pipeline

[As I Warned: RNA Gold Rush; New Genetic Products in the Pipeline](#)

May 24, 2021

Before I get to the financial bonanza, I have to make a few comments about the COVID RNA vaccine itself.

This shot-in-the-arm gene treatment should be seen AS AN EXTENSION of genetic research into altering humans.

Because that's what it is.

The field of gene research includes "creating better humans" and eugenics.

Eugenics involves what American Rockefeller and Nazi researchers were setting up: depopulation; population control; selecting out "superior genetic strains" for survival.

William Engdahl and Dr. Peter Breggin have done excellent historical analysis of the eugenics movement. [1] [1a] [1b] [2] [2a]

Another point: In recent articles, I've pointed out that ALL genetic research—beyond its motives—is also fraught with unintended ripple-effect consequences. Never believe that the targets and the consequences can be contained. [3] [4]

For example, the notion that the COVID shot will do nothing

more than force cells of the body to produce one protein is absurd. It's on the level of saying, "During rush hour, on the most crowded high-speed highway in the world, we can engineer a two-car crash that will only result in two minor fender-benders..." [4]

Both short and long-term effects of the COVID shot are unknown and unpredictable.

The perpetrators of the COVID RNA shot are criminally insane.

And with that...on to the MONEY.

Bring on the angels and trumpets. Bring on the cash.

A year ago I told you COVID vaccine-testing was rocketing ahead, because Bill Gates, the Rockefeller institute, NIH, the manufacturers, and Fauci saw the light at the end of the tunnel— [5]

The fake pandemic was their golden opportunity to win approval for the first RNA pharma product in history, and once that victory was achieved—

They would beat the drum for new RNA vaccines, WHICH ARE CHEAPER, EASIER, AND FASTER TO MANUFACTURE, AND FAR MORE PROFITABLE. [6]

They would hype new genetic treatments across the board—on the back of the fact that there is not a single genetic cure for any disease. But who cares about facts?

Now, as massive numbers of injuries and deaths from the COVID RNA vaccine pile up, Stephen Uhl, president and CEO of the Pharmaceutical Research and Manufacturers of America (PhRMA), gushes: *"...We're really entering the golden era of medicine."* He goes on to sell blue-sky "RNA platforms" for reversing child blindness and MS. [7] [7a]

Albert Bourla, the CEO of Pfizer, bloviates about coming

genetic cures for flu and cancer. [7b]

Biospace.com: "mRNA tech used in COVID vaccines could be used to cure HIV, cancer, and other diseases." [8]

Nature/Biotechnology ("Messengers of hope," 29 December 2020; 39, page 1 (2021)): "Emergency Use Authorizations for two mRNA COVID-19 vaccines represent a turning point in the pandemic. They also herald a new era for vaccinology." [9]

Think of these hustlers as cartoon characters dancing on a sea of real blood and death created by the RNA COVID vaccines.

In case you've forgotten, Moderna, whose COVID shot is now firmly entrenched, had never brought a single product to market in its brief history, but with Fauci's guidance, managed to snatch \$500 million in US government funding to develop the vaccine. Moderna was committed to RNA technology; that was its ticket to fame and fortune. [10]

The landscape of fake promotion about genetic cures is basically a cover for extreme damage created by corporations and governments.

"Confidentially, the truth is, what we're calling autism isn't a disorder or a disease. It's neurological INJURY caused by vaccines and other environmental toxins. But we SAY autism is genetic. We can keep raising money for research—if you want to call it that—and hide what's really going on."

Some of these researchers are true believers in the Gene Cult. They actually think the day will come when a person can strip naked and bathe in a pool of poisonous effluent pouring out of a factory pipe—and because that person has received a genetic treatment (like the RNA COVID vaxx), no harm will come to him.

Look for this to happen soon: it'll be a child, a child with "a rare disorder." Perhaps blindness. And now: the child can see. Breakthrough. Genetic treatment. Of course, the details

of the published study will be somewhat murky. You know, “proprietary technology.”

And quite possibly, only four children in the world have this rare disorder. That means the genetic treatment is 25% effective—an unbelievable marvel.

“Was it RNA, Doctor? Is that what you injected?”

“Well, Lesley, I can’t take you and the *60 Minutes* crew into the lab. It’s a high security facility. But yes, for your audience, I can reveal that we deployed the most up to date CRISPR gene-editing technology, and it worked exactly as we hoped it would...”

“Is the cure permanent?”

“Lesley, I remember something my mentor at NIH, Doctor Goldbrick Hogcrusher, told me a long time ago. In this world, we live one day at a time. Who can say what tomorrow brings? We count our blessings, and we move on...”

Behind the propaganda: money and population control.

And unpredictable genetic ripple effects.

Seven billion “experimental subjects.”
