

Australia's Telco Watchdog Holds a Behind Closed Doors Auction to Sell the Untested 5G Millimetre (26GHZ) Wave Spectrum, Up for Grabs to the Highest Bidder

[Australia's Telco Watchdog Holds a Behind Closed Doors Auction to Sell the Untested 5G Millimetre \(26GHZ\) Wave Spectrum, Up for Grabs to the Highest Bidder](#)

by [We Are Not SAM](#)

April 12, 2021

Today (12 April 2021) is an extremely concerning day in Australia for the advancement of the Fifth Generation (5G) roll-out.

The Australian Government's agency [Australian Media and Communications Authority \(ACMA\)](#) is set to profit enormously from the sale of 5G millimetre wave spectrum licences (on top of the billions of dollars already made from previous spectrum license sales).

As we speak, there is a private [auction](#) being held behind closed doors.

5G mmWave spectrum auctions in Australia begin April 2021

The ACMA announced on 22 Dec 20 that 15 applicant companies were offered a licence in the 26 GHz and 28 GHz bands including: MarchNet, Dreamtilt, Field Solutions Group, Opticomm, Nokia, NBN Co, Optus, Telstra, Vocus, Starlink (SpaceX), WorldVu (One Web), Inmarsat, Viasat, O3B/SES, and New Skies Satellites/SES.

Why did you not hear about this? Well, simply because ACMA and Big Telco want this to “slip under the radar” and subsequently our mainstream media have little interest in reporting on it.

What the mainstream media ought to be reporting on is the fact that Big Telco are moving ahead with experimental millimetre wave technology *against* the will of the people!

What we know is that over 100,000 people in Australia have come forward in social media communities objecting to the 5G upgrade due to lack of scientific research and safety!

What we know is that the Telco “watchdog” ACMA are now set to give even more power to the [self-regulated Telco industry.](#)

bandwidth needed for the performance of the equipment the bidder desires to operate. The spectrum lots are not pre-designed to accommodate any particular equipment standard. However, they may accommodate the operation of a particular standard (or even non-standard equipment) at a particular location and frequency, depending on the total bandwidth and area of the spectrum licence that a bidder has acquired."

(6.7.1 Flexibility of a spectrum licence pg.79)

What we know currently is that the 5G upgrades all over Australia are not yet operating in the millimetre wave spectrum.

But it's only a matter of time.

There is no better time than NOW to oppose the further deployment of this experimental 5G infrastructure.

We are calling on you to take off your rose-coloured glasses and truly see the marketing propaganda that has been dished up by Big Telco.

WHAT CAN YOU DO?

Step 1. Boycott 5G phone. Simply don't buy them. This one powerful action will disable the networks ability to

communicate with the 5G technology!

Step 2. Know your stuff – stay informed! Sign up for the We Are Not SAM News and keep an eye out on our [Instagram](#) for truth bombs and the latest information. Learn more from [We Are Not SAM](#) and [ORSAA](#).

Step 3. Find out where 5G is being rolled out in [Australia](#).

Step 4. Talk with friends, family, neighbours, schools – spread the word!

Step 5. Sign the [We Are Not SAM petition](#).

We literally hold the remote control in our hands and it's time to put a stop to this madness.

If we want to have a world with Safe Technology we must have proper safety testing and put a halt to any further deployment of Fifth Generation infrastructure.
