

Before COVID, Gates Planned Social Media Censorship of Vaccine Safety Advocates With Pharma, CDC, Media, China and CIA

[Before COVID, Gates Planned Social Media Censorship of Vaccine Safety Advocates With Pharma, CDC, Media, China and CIA](#)

In October 2019, shortly before the COVID outbreak, Gates and other powerful individuals began planning how to censor vaccine safety advocates from social media during a table-top simulation of a worldwide pandemic, known as Event 201.

March 11, 2021

Over the last two weeks, [Facebook](#) and other social media sites have [deplatformed me](#) and many other critics of regulatory corruption and authoritarian public health policies. So, here is some fodder for those of you who have the eerie sense that the government/industry pandemic response feels like it was planned – even before there was a pandemic.

The [attached document](#) shows that a cabal of powerful individuals did indeed begin planning the mass eviction of [vaccine skeptics](#) from social media in October 2019, a week or two before [COVID](#) began circulating. That month, Microsoft founder [Bill Gates](#) organized an exercise of four “table-top” simulations of a worldwide coronavirus pandemic with other

high-ranking “Deep State” panjandrums. The exercise was referred to as [Event 201](#).

Gates’ co-conspirators included representatives from the World Bank, the World Economic Forum ([Great Reset](#)), Bloomberg/Johns Hopkins University Populations Center, the Centers for Disease Control and Prevention, various media powerhouses, the Chinese government, a former Central Intelligence Agency/National Security Agency director (there is no such thing as a former CIA officer), vaccine maker [Johnson & Johnson](#), the finance and biosecurity industries and Edelman, the world’s leading corporate PR firm.

At Gates’ direction, these eminences role-played members of a Pandemic Control Council, wargaming government strategies for controlling the pandemic, the narrative and the population. Needless to say, there was little talk of building immune systems, off-the-shelf remedies or off-patent therapeutic drugs and vitamins, but lots of chatter about promoting uptake of new patentable antiviral drugs and [vaccines](#).

But the participants primarily focused on planning industry-centric, fear-mongering, police-state strategies for managing an imaginary global coronavirus contagion culminating in mass censorship of social media.

Oddly, Gates now claims that the simulation didn’t occur. On April 12, 2020, Gates [told BBC](#), “Now here we are. We didn’t simulate this, we didn’t practice, so both the health policies and economic policies, we find ourselves in uncharted territory.”

Unfortunately for that whopper, the [videos of the event](#) are still available across the internet. They show that Gates and team did indeed simulate health and economic policies. It’s hard to swallow that Gates has forgotten.

Gates’s Event 201 simulated COVID epidemic caused 65 million deaths at the 18-month endpoint and global economic collapse

lasting up to a decade. Compared to the Gates simulation, therefore, the actual COVID-19 crisis is a bit of a dud, having imposed a mere [2.5 million deaths](#) “attributed to COVID” over the past 13 months.

The deaths “attributed to COVID” in the real-life situation are highly questionable, and must be seen in the context of a global population of 7.8 billion, with about 59 million deaths expected annually. The predictions of decade-long economic collapse will probably prove more accurate – but only because of the draconian lockdown promoted by Gates.

Gates’ Event 201 script imagines vast anti-vaccine riots triggered by internet posts. The universal and single-minded presumption among its participants was that such a crisis would prove an opportunity of convenience to promote new vaccines, and tighten controls by a [surveillance](#) and censorship state.

[Segment four](#) of the script – on manipulation and control of public opinion – is most revealing. It uncannily predicted democracy’s current crisis:

- The participants discussed mechanisms for controlling “disinformation” and “misinformation,” by “flooding” the media with propaganda (“good information”), imposing penalties for spreading falsehoods and discrediting the anti-vaccination movement.
- Jane Halton, of Australia’s ANZ Bank, one of the authors of Australia’s oppressive “no jab, no pay” policy, assured the participants that Gates Foundation is creating algorithms “to sift through information on these social media platforms” to protect the public from dangerous thoughts and information.
- George Gao, the prescient director of the Chinese Center for Disease Control, worries about how to suppress “rumors” that the virus is laboratory generated: “People believe, ‘This is a manmade’... [and that] some

pharmaceutical company made the virus.”

- Chen Huang, an Apple research scientist, Google scholar and the world’s leading expert on tracking and tracing and facial recognition technology, role-plays the newscaster reporting on government countermeasures. He blames riots on anti-vaccine activists and predicts that Twitter and Facebook will cooperate in “identify[ing] and delete[ing] a disturbing number of accounts dedicated to spreading misinformation about the outbreak” and to implement “internet shutdowns ... to quell panic.”
- Dr. Tara Kirk Sell, a senior scholar at Bloomberg School of Health’s Johns Hopkins Center for Health Security, worries that [pharmaceutical companies](#) are being accused of introducing the virus so they can make money on drugs and vaccines: “[We] have seen public faith in their products plummet.” She notes with alarm that “Unrest, due to false rumors and divisive messaging, is rising and is exacerbating spread of the disease as levels of trust fall and people stop cooperating with response efforts. This is a massive problem, one that threatens governments and trusted institutions.”

Sell reminds her fellow collaborators that “We know that social media is now the primary way that many people get their news, so interruptions to these platforms could curb the spread of misinformation.” There are many ways, Sell advises, for government and industry allies to accomplish this objective: “Some governments have taken control of national access to the Internet. Others are censoring websites and social media content and a small number have shut down Internet access completely to prevent the spread of misinformation. Penalties have been put in place for spreading harmful falsehoods, including arrests.”

- Matthew Harrington, CEO of Edelman Public Relations agrees that social media must fall in line to promote

government policy: “I also think we’re at a moment where the social media platforms have to step forward and recognize the moment to assert that they’re a technology platform and not a broadcaster is over. They in fact have to be a participant in broadcasting accurate information and partnering with the scientific and health communities to counterweight, if not flood the zone, of accurate information. Because to try to put the genie back in the bottle of misinformation and disinformation is not possible.”

- Stephen Redd, the Admiral of the Public Health Service, has the sinister notion that government should mine social media data to identify people with negative beliefs: “I think with the social media platforms, there’s an opportunity to understand who it is that’s susceptible ... to misinformation, so I think there’s an opportunity to collect data from that communication mechanism.”
- Adrian Thomas of Johnson & Johnson announces “some important news to share from some of “our member companies [Pharma]”: We are doing clinical trials in new antiretrovirals, and in fact, in vaccines!” He recommends a strategy to address the problems to these companies when “rumors were actually spreading” that their shoddily tested products “are causing deaths and so patients are not taking them anymore.” He suggests, “Maybe we’re making the mistake of reporting and counting all the fatalities and infections.”
- Former CIA deputy director, Avril Haines unveiled a strategy to “flood the zone” with propaganda from “trusted sources,” including “influential community leaders, as well as health workers.” He warns about “false information that is starting to actually hamper our ability to address the pandemic, then we need to be able to respond quickly to it.”
- Matthew Harrington (Edelman CEO) observes that the Internet – which once promised the decentralization and

democratization of information – now needs to be centralized: “I think just to build a little bit on what Avril said, I think as in previous conversations where we’ve talked about centralization around management of information or public health needs, there needs to be a centralized response around the communications approach that then is cascaded to informed advocates, represented in the NGO communities, the medical professionals, et cetera.”

- Tom Inglesby (John Hopkins biosecurity expert advisor to the National Institutes of Health, the Pentagon and Homeland Security) agrees that centralized control is needed: “You mean centralized international?”
- Matthew Harrington (Edelman) replies that information access should be: “Centralized on an international basis, because I think there needs to be a central repository of data facts and key messages.”
- Hasti Taghi (Media Advisor) sums up: “The anti-vaccine movement was very strong and this is something specifically through social media that has spread. So as we do the research to come up with the right vaccines to help prevent the continuation of this, how do we get the right information out there? How do we communicate the right information to ensure that the public has trust in these vaccines that we’re creating?”
- Kevin McAleese, communications officer for Gates-funded agricultural projects, observes that: “To me, it is clear countries need to make strong efforts to manage both mis- and disinformation. We know social media companies are working around the clock to combat these disinformation campaigns. The task of identifying every bad actor is immense. This is a huge problem that’s going to keep us from ending the pandemic and might even lead to the fall of governments, as we saw in the Arab Spring. If the solution means controlling and reducing access to information, I think it’s the right choice.”
- Tom Inglesby, director of Bloomberg’s Johns Hopkins

Center for Health Security concurs, asking if “In this case, do you think governments are at the point where they need to require social media companies to operate in a certain way?”

- Lavan Thiru, Singapore’s Finance Minister suggests that the government might make examples of dissidents with “government or enforcement actions against fake news. Some of us, this new regulations are come in place about how we deal with fake news. Maybe this is a time for us to showcase some cases where we are able to bring forward some bad actors and leave it before the courts to decide whether they have actually spread some fake news.”

Read the attached transcript to see how Gates and his government, pharma and intelligence apparatus telegraphed their plans to censor and control the media during the pandemic. In yet another uncanny coincidence, COVID-19 began circulating among global populations within days of Gates’ meeting.
