Video available at The HighWire [Bitchute](#) and [Brighteon](#) channels.

Put aside the obvious concerns mask wearers face: reduced oxygen levels, anxiety disorders, and scientific lack of efficacy.

Since 2012, research has shown that inhaling nanofibers can pose a serious risk to inflammation in the lungs, even mesothelioma (cancer) due to its similar shape to asbestos.

Jefferey Jaxen highlights a recent study showing the potential threat to inhaling nano plastics shed from masks.
