

The Right to Bodily Integrity: Nobody Wins and We All Lose in the COVID-19 Showdown

[The Right to Bodily Integrity: Nobody Wins and We All Lose in the COVID-19 Showdown](#)

by [John W. Whitehead & Nisha Whitehead, The Rutherford Institute](#)

August 18, 2021

“We’ve reached the point where state actors can penetrate rectums and vaginas, where judges can order forced catheterizations, and where police and medical personnel can perform scans, enemas and colonoscopies without the suspect’s consent. And these procedures aren’t to nab kingpins or cartels, but people who at worst are hiding an amount of drugs that can fit into a body cavity. In most of these cases, they were suspected only of possession or ingestion. Many of them were innocent... But these tactics aren’t about getting drugs off the street... [These tactics are instead about degrading and humiliating a class of people that politicians and law enforcement have deemed the enemy.](#)”—Radley Balko, *The Washington Post*

Freedom is never free.

There is always a price—always a sacrifice—that must be made in order to safeguard one’s freedoms.

Where that transaction becomes more complicated is when one has to balance the rights of the individual with the needs of

the community.

Philosophers such as Thomas Hobbes, John Locke and Jean-Jacques Rousseau envisioned the social contract between the individual and a nation's rulers as a means of finding that balance. Invariably, however, those in power grow greedy, and what was intended to be a symbiotic relationship with both sides benefitting inevitably turns into a parasitic one, with a clear winner and a clear loser.

We have seen this vicious cycle play out over and over again throughout the nation's history.

Just look at this COVID-19 pandemic: the whole sorry mess has been so overtly politicized, propagandized, and used to expand the government's powers (and Corporate America's bank balance) that it's difficult at times to distinguish between what may be legitimate health concerns and government power grabs.

After all, the government has a history of shamelessly exploiting national emergencies for its own nefarious purposes. Terrorist attacks, mass shootings, civil unrest, economic instability, pandemics, natural disasters: the government has been taking advantage of such crises for years now in order to gain greater power over an unsuspecting and largely gullible populace.

This COVID-19 pandemic is no different.

Yet be warned: we will all lose if this pandemic becomes a showdown between COVID-19 vaccine mandates and the right to bodily integrity.

It doesn't matter what your trigger issue is—whether it's vaccines, abortion, crime, religion, immigration, terrorism or some other overtly politicized touchstone used by politicians as a rallying cry for votes—we should all be concerned when governments and businesses (i.e., the Corporate State) join forces to compel individuals to sacrifice their *right* to

bodily integrity (which goes hand in hand with the right to conscience and religious freedom) on the altar of so-called safety and national security.

That's exactly what's unfolding right now, with public and private employers using the threat of termination to [force employees to be vaccinated](#) against COVID-19.

Unfortunately, legal protections in this area are limited.

While the Americans with Disabilities Act protects those who can prove they have medical conditions that make receiving a vaccination dangerous, employees must be able to prove they have a sensitivity to vaccines.

Beyond that, employees with a religious objection to the vaccine mandate can try to [request an exemption](#), but even those who succeed in gaining an exemption to a vaccine mandate may have to submit to routine COVID testing and mask requirements, especially if their job involves contact with other individuals.

Under the First Amendment and Title VII of the Civil Rights Act of 1964, individuals have a right of conscience and/or religious freedom to ask that their sincere religious beliefs against receiving vaccinations be accommodated. To this end, The Rutherford Institute has issued [guidance and an in-depth fact sheet and model letter](#) for those seeking a religious exemption to a COVID-19 vaccine mandate in the workplace. The Rutherford Institute's policy paper, "[Know Your Rights: How To Request a Religious Accommodation for COVID-19 Vaccine Mandates in the Workplace](#)," goes into the details of how and why and in which forums one can request such accommodation, but there is no win-win scenario.

As with all power plays of this kind, the ramifications of empowering the government and its corporate partners to force individuals to choose between individual liberty and economic survival during a so-called state of "emergency" can lead to

terrifying results.

At a minimum, it's a slippery slope that justifies all manner of violations in the name of national security, the interest of the state and the so-called greater good.

If the government—be it the President, Congress, the courts or any federal, state or local agent or agency—can willfully disregard the rights of any particular person or group of persons, then that person becomes less than a citizen, less than human, less than deserving of respect, dignity, civility and bodily integrity. He or she becomes an “it,” a faceless number that can be tallied and tracked, a quantifiable mass of cells that can be discarded without conscience, an expendable cost that can be written off without a second thought, or an animal that can be bought, sold, branded, chained, caged, bred, neutered and euthanized at will.

That's exactly where we find ourselves now: caught in the crosshairs of a showdown between the rights of the individual and the so-called “emergency” state.

All of those freedoms we cherish—the ones enshrined in the Constitution, the ones that affirm our right to free speech and assembly, due process, privacy, bodily integrity, the right to not have police seize our property without a warrant, or search and detain us without probable cause—amount to nothing when the government and its agents are allowed to disregard those prohibitions on government overreach at will.

This is the grim reality of life in the American police state.

Our so-called rights have been reduced to technicalities in the face of the government's ongoing power grabs.

Yet those who founded this country believed that what we conceive of as our rights were given to us by God—we are created equal, according to the [nation's founding document, the Declaration of Independence](#)—and that government cannot

create nor can it extinguish our God-given rights. To do so would be to anoint the government with god-like powers and elevate it above the citizenry.

And that, in a nutshell, is what happens when government officials are allowed to determine who is deserving of constitutional rights and who should be stripped of those rights for whatever reason may be justified by the courts and the legislatures.

In this way, concerns about COVID-19 mandates and bodily integrity are part of a much larger debate over the ongoing power struggle between the citizenry and the government over our property "interest" in our bodies. For instance, who should get to decide how "we the people" care for our bodies? Are we masters over our most private of domains, our bodies? Or are we merely serfs who must answer to an overlord that gets the final say over whether and how we live or die?

This debate over bodily integrity covers broad territory, ranging from abortion and euthanasia to forced blood draws, biometric surveillance and basic healthcare.

Forced vaccinations are just the tip of the iceberg.

Forced vaccinations, forced cavity searches, forced colonoscopies, forced blood draws, forced breath-alcohol tests, forced DNA extractions, forced eye scans, forced inclusion in biometric databases: these are just a few ways in which Americans continue to be reminded that we have no control over what happens to our bodies during an encounter with government officials.

Consider the case of *Mitchell vs. Wisconsin* in which the U.S. Supreme Court in a [5-4 decision](#) found nothing wrong when [police officers read an unconscious man his rights and then proceeded to forcibly and warrantlessly draw his blood while he was still unconscious](#) in order to determine if he could be charged with a DUI.

To sanction this forced blood draw, the cops and the courts hitched their wagon to state “implied consent” laws (all of the states have them), which suggest that merely *driving* on a state-owned road implies that a person has consented to police sobriety tests, breathalyzers and blood draws.

More than [half of the states \(29 states\) allow police to do warrantless, forced blood draws on unconscious individuals](#) whom they suspect of driving while intoxicated.

Seven state appeals courts have declared these warrantless blood draws when carried out on unconscious suspects are unconstitutional. Courts in seven other states have found that implied consent laws run afoul of the Fourth Amendment. And yet seven other states (including Wisconsin) have ruled that [implied consent laws provide police with a free pass when it comes to the Fourth Amendment and forced blood draws.](#)

Read the writing on the wall, and you’ll see how little remains of our right to bodily integrity in the face of the government’s steady assaults on the Fourth Amendment.

Our freedoms—especially the Fourth Amendment—continue to be strangulated by a prevailing view among government bureaucrats that they have the right to search, seize, strip, scan, spy on, probe, pat down, taser, and arrest *any* individual at *any* time and for the *slightest* provocation.

Worse, on a daily basis, Americans are being made to relinquish the most intimate details of who we are—our biological makeup, our genetic blueprints, and our biometrics (facial characteristics and structure, fingerprints, iris scans, etc.)—in order to clear the nearly insurmountable hurdle that increasingly defines life in the United States: **we are now guilty until proven innocent.**

Such is life in America today that individuals are being threatened with arrest and carted off to jail for the least hint of noncompliance, homes are being raided by militarized

SWAT teams under the slightest pretext, property is being seized on the slightest hint of suspicious activity, and roadside police stops have devolved into government-sanctioned exercises in humiliation and degradation with a complete disregard for privacy and human dignity.

While forced searches—of one's person and property—may span a broad spectrum of methods and scenarios, the common denominator remains the same: a complete disregard for the dignity and rights of the citizenry.

Unfortunately, the indignities being heaped upon us by the architects and agents of the American police state—whether or not we've done anything wrong—are just a foretaste of what is to come.

The government doesn't need to tie you to a gurney and forcibly take your blood or strip you naked by the side of the road in order to render you helpless. As this showdown over COVID-19 vaccine mandates makes clear, the government has other methods—less subtle perhaps but equally devastating—of stripping you of your independence, robbing you of your dignity, and undermining your rights.

With every court ruling that allows the government to operate above the rule of law, every piece of legislation that limits our freedoms, and every act of government wrongdoing that goes unpunished, we're slowly being conditioned to a society in which we have little real control over our bodies or our lives.

You may not realize it yet, but you are not free.

If you believe otherwise, it is only because you have made no real attempt to exercise your freedoms.

Had you attempted to exercise your freedoms before now by questioning a police officer's authority, challenging an unjust tax or fine, protesting the government's endless wars,

defending your right to privacy against the intrusion of surveillance cameras, or any other effort that challenges the government's power grabs and the generally lopsided status quo, you would have already learned the hard way that the American Police State has no appetite for freedom and it does not tolerate resistance.

This is called authoritarianism, a.k.a. totalitarianism, a.k.a. oppression.

As Glenn Greenwald [notes](#) for the *Guardian*:

Oppression is designed to compel obedience and submission to authority. Those who voluntarily put themselves in that state – by believing that their institutions of authority are just and good and should be followed rather than subverted – render oppression redundant, unnecessary. Of course people who think and behave this way encounter no oppression. That's their reward for good, submissive behavior. They are left alone by institutions of power because they comport with the desired behavior of complacency and obedience without further compulsion. But the fact that good, obedient citizens do not themselves perceive oppression does not mean that oppression does not exist.

Get ready to stand your ground or run for your life.

As I make clear in my book [Battlefield America: The War on the American People](#), our government “of the people, by the people and for the people” has been transformed into a greedy pack of wolves that is on the hunt.

“We the people” are the prey.

La Quinta Columna Scientists: Human, Animal & Plant Life Are All Susceptible to Graphene at the Molecular Level

[La Quinta Columna Scientists: Human, Animal & Plant Life Are All Susceptible to Graphene at the Molecular Level](#)

[La Quinta Columna on Hemoglobin, Chlorofyll, and Graphene](#)

by [Orwellito](#), [Orwell City](#)

August 12, 2021

It's no secret that graphene is a nanomaterial in vogue that's being used to transhumanize the population. However, once it's introduced into the environment, not only human beings are affected by it. But also all life around us: bacteria, animals, plants, etc.

The essence that defines the natural part of the expression of life has been under attack for a long time. There are [chemtrails](#), [transgenic food](#), [drugs](#), and [synthetic elements](#) that affect the natural processes of living beings. However, this moment in history is probably the most crucial of all.

Nanomaterials and nanotechnology seem to be present in

everything. [The controlling elite](#) wants –at all costs– to turn us into something completely different from what we’re by definition. And, at the same time, it aims to change our environment by subjecting it to the same processes. What is the point of living in an artificial world if our nature inherently diverges from what we really are?

It’s almost like the latest technological advances –instead of bringing benefits to all of us–, are only bringing benefits to the [controllers who want to keep us subdued](#).

In the following video that [Orwell City](#) has prepared, Dr. José Luis Sevillano and Ricardo Delgado from [La Quinta Columna](#) comment on an IBM video showing a negative priming connecting hemoglobin, chlorophyll, and graphene. Something worth keeping in mind given all the changes we are seeing in humans, animals, and food.

Transcript:

Ricardo Delgado:

We’ll watch a video where they talk about the world of computing from the basement of an IBM facility. It talks about graphene. In addition, there’s an image that we are going to stop at second 13. The video lasts 2 minutes. Let’s watch it because it is very curious.

OK. I’m going to stop it and go back a little bit so you can see something. Look at what appears here.

Graphene appears here. And hemoglobin. But there’s also chlorophyll. OK? That’s, there’s an interaction of graphene with chlorophyll and with human cells as well. We’ll see more of this later because it’s relevant. This is, as I said, the basement of an IBM facility.

IBM video:

Let me give you a little bit of context. This you're looking at here is an atomic force microscope. A type of...

Ricardo Delgado:

That's the same microscope that was in that video about magnetic graphene. Remember, José Luis? They managed to see it through that microscope. The atomic force microscope characterizes nanomaterials with the Raman technique to identify what's graphene, graphene oxide, fullerene, or whatever.

Dr. Sevillano:

Yes.

Ricardo Delgado:

But they don't need to be that big either. They sell much cheaper ones. A type of microscope developed in these same IBM laboratories thanks to the advances made by Binnig and Rohrer in 1981, which is why they were awarded the Nobel Prize in Physics in 1986.

And you may ask, why is this type of microscope so interesting? Well, because with it, we can obtain images with a resolution of less than a nanometer. That is, at the atomic scale. We're talking about being able to visualize molecules and the position of the atoms that make them up. This image you're looking at was presented in 2009 by IBM. And was the first to show at this level of resolution the atomic structure of a molecule.

Currently, the team has not only managed to visualize these structures, but they have also managed to create new molecules by manipulating them at the atom level.

Remember that carbon, depending on how it's molecularly

structured, can give us substances as different as graphite, diamond, or graphene? Well, in that sense, during the presentation, it was explained to us that their latest project on which they're working has consisted of isolating a carbon molecule whose structure is shaped like a ring of 18 atoms. The CycleCarbon 18.

All this is to study its properties. To achieve this, they have got, via postal mail, from the University of Oxford, with whom they collaborate, this type of triangular molecules here and then...

Ricardo Delgado:

Oxford University, huh? That one is also involved in all this.

IBM video:

And then, to proceed to cut it by eliminating atoms that aren't of interest, and then we get the desired carbon ring. And, seriously, stop and think about what they're doing. To me, this is science fiction.

Ricardo Delgado:

Well, this is for those at VerificaRTVE, who claim that there are no different two-dimensional sheet structures. They talk about carbon, for example.

[Our friend Josep](#), who brings out very good news, has shared with us this screenshot. He found, precisely, this one.

It says, 'The most beautiful thing I learned today is that chlorophyll' –related to graphene in the video– 'chlorophyll and blood' –the video also shows hemoglobin and graphene– 'are chemically identical.' The only difference is that

chlorophyll has the center of a magnesium atom and blood has the center of an iron atom. Plants and animals are very, very similar at that level. Fascinating. And here comes the comparison.

This means that, just as it has been done with animal life in some way, it has also been introduced to plant life. And it would explain what we're seeing. Perhaps, José Luis, this could be a hypothesis to take into account in order...

Dr. Sevillano:

Yes, yes, it could be. It could be. It should also be taken into account. Because of the damage that can be done to plants in the future by the fact that... **There's damage being done to plants through electromagnetic waves as well. At the end of the day, chlorophyll is what makes it possible to create energy.** And if it affects them... Well, my friend, the plants die. **In the same way that it happens with human beings, with animal cells, it also happens to plants with these fields.**

It's a very nice detail to have compared the two molecules and see that only the central atom changes.

The Variant Ruse

The Variant Ruse

by [Rosanne Lindsay, Naturopath, *The Nature of Healing*](#)

August 4, 2021

All life adapts to its environment. All life adapts to survive. Humans adapt to variations in space, time, temperature, pressure, fear, and intimidation. We are variants.

So, too, are our microbes. Humans are more microbe than human, 10:1.

Variant: Having or exhibiting variation;

Vaccine science has shown that viruses mutate to cause variants, and [vaccines create variants](#).

This fact was shown with [Bordetella pertussis](#), a bacterium blamed for whooping cough, which adapted itself to survive the vaccine. According to the February 7, [2013 New England Journal of Medicine study](#), the authors concluded that adaptation of B. pertussis was “in response to vaccine selection pressure.”

Variants are vaccine side effects, also called [breakthrough infections by the scientific community](#). The cure is the cause. When vaccines fail, infections break through.

The one thing the experts know is that [21 COVID variants are coming down the pipeline](#). Here is one list showing their Greek names and birthdates/release dates between June 2021 (Delta) and February 2023 (Omega).

Variant	Name	Birthdate
---------	------	-----------

A	Delta	Jun 2021
E	Epsilon	Jul 2021
Z	Zeta	Aug 2021
H	Eta	Sept 2021
θ	Theta	Oct 2021
I	Iota	Nov 2021
K	Kappa	Dec 2021
λ	Lambda	Jan 2022
M	Mu	Feb 2022
N	Nu	Mar 2022
Ξ	Ksi	April 2022
0	Omicron	May 2022
Π	Pi	June 2022
P	Rho	July 2022
Σ	Sigma	Aug 2022
T	Tao	Sept 2022
Y	Upsilon	Oct 2022
Φ	Phi	Nov 2022
X	Chi	Dec 2022
Ψ	Psi	Jan 2023
Ω	Omega	Feb 2023

Yet still, no one knows the true costs to health from injected spike proteins and nanotechnology inherent in COVID vaccines. No time for research. And [no clinical trial vaccine data is available](#) for people to analyze for themselves before making a choice whether to inject, or not to inject, because clinical trials continue, live, in the population. And experimental vaccines are being deployed by chosen vaccine makers who have never produced this type of medical product before.

No responsible party for negative consequences. [Vaccine makers are not liable for damages](#) from their experimental products. Doctors are not responsible for reporting any adverse reactions from the COVID vaccines to authorities, even though the CDC-authority has a reporting system called The Vaccine Adverse Events Reporting System (VAERS). VAERS collects less than 1% of adverse events reports from medical doctors who fail to report them. See the [latest results for COVID vaccine reactions here.](#)

The PCR Ruse

Meanwhile, the PCR test that drives the numbers of reported cases up, along with deaths, surges, and fear, has been [deemed invalid by the CDC](#). The CDC has quietly withdrawn its request to use the PCR test to identify COVID vs. Flu. This means that no valid tracking test exists for the [virus, that was never isolated](#), and that shut down the world, eliminated jobs, and caused suicide, hardship and regret for neglecting elderly family members who died alone.

If no valid test exists to track the coronavirus [one word], then what does that say about coronavirus itself? Is it real? Is it corona virus? Or is it just a word masquerading as a virus? Is it a bacterium? A figment of someone's imagination? What does it say about the power of "the experts" and their mandates who attempt to track a figment?

SARS-COV Patents, 2007

What does it say that the CDC has owned the [patent on the SARS-CoV virus since 2007?](#)

Even though [the coronavirus has never been isolated](#), the entire gene sequence for what became sars coronavirus [SARS-COV2] are found in patents [#7220852](#), [#46592703p](#), and [#776521](#). These patents are violation of [35 US code section 101](#)— because you cannot patent a naturally occurring substance.

What does it say that 120 patents for a number of bacterial

and viral pathogens were filed from NIH, NIAID, US armed services infectious disease program, and the international agencies that collaborated with them?

Coronavirus is seen as a potential vector of disease, [a synthetic pathogen to cause illness](#). The vaccine technology has also been considered as a potential biological weapon candidate. For more of the story, see [Coronavirus Is Not Novel](#). The same is true of the [5G Technology which is considered a weapon](#) in national defense. What is the purpose of implanting synthetic technology into human bodies other than to create synthetic human hybrids? For more details, see [The Transhumanist Agenda: Loss of Identity](#).

A pandemic of fear has morphed into a pandemic of illness. Yet still, there are over 500,000 adverse events reported for the COVID vaccines since injections began. See the [updated COVID adverse reactions reported to VAERS](#).

Transmuting The Transhumanist Agenda

There are no consequences for the those who take part in modifying the genetics of the whole population. Under conditioning through the media, social engineers are taking advantage of human ignorance, by modifying human behavior right along with the genome. As long as the population consents to the biologic invasion, humanity becomes a farm of genetic material, ripe for DNA harvesting.

Yet, each human has free will and the power to say NO.

You have **the power to not consent** to biologic invasion and takeover of your humanity. Simply do not consent to anything that comes from fear. Declare out loud. **“I Do Not Consent to manipulation of my biologic identity.”** I Do Not Consent to harvesting of my property. I Do Not Consent. **Say it out loud and know it** because no one has the right to violate your property, your body, your DNA, your mind, or your free will.

Under mind manipulation, whether through the media, through government dictates, through frequencies emitted from towers or devices, or through intimidation by others, it is important to maintain a strong mind and your willpower. Mind over matter has never been more critical. The Corona-agenda was never about a runaway virus or Greek covariants. The agenda is about creating a Transhuman variant out of humanity via conditioning to be controlled. Know your mind.

Do you consent?

These are history-making times and you are part of it, here to do your part to liberate yourself and humanity from synthetic slavery. No one else saves humanity, just as no one else can heal you. We each save ourselves. We each heal ourselves.

The Use of Nanobot Technology (NT) & Artificial Intelligence (AI) as a Vaccine Carrier and Adjuvant

[The Use of Nanobot Technology \(NT\) & Artificial Intelligence \(AI\) as a Vaccine Carrier and Adjuvant](#)

by [Robert O. Young, DSc, PhD, Naturopathic Practitioner](#)
[August 2, 2021](#)

Endogenous Crowning and Protein Spiking of the Red Blood Cells After Vaccination

[Programmable magnetic nanobots](#) injected into the vascular and interstitial fluids of a human or animal body are found to be deposited into the connective and fatty tissues and then into

the organs and glands potentially causing biological transformation of the cell membrane (crowning and protein spiking), genetic mutation, and the death of the cell.[1]

Programmable Magnetic Nanobots

[Nanobots](#) can be injected using an ordinary hypodermic syringe. The [nanobots](#) are microscopic functioning robots with the ability to walk and withstand harsh environments. Each robot is 70- μm in length as seen above and can also be as small as 1-nm in length, which is the width of one atom, up to a billion can be produced from a single 4-inch silicon composite wafer as seen above. The original nanofabrication techniques were developed by Marc Miskin and colleagues at Cornell University. The research was presented at the American Physical Society in March of 2017. According to a release from *EurekAlert*, the team spent years developing a nanofabrication process that can produce a million [nanobots](#) from a specialized 4-inch silicon wafer in the span of weeks.

Four-Legged Nanobots –
<https://rumble.com/vkm84h-is-nanobot-technology-or-artificial-intelligence-viable-inside-the-human-bo.html>

These micro-robots shown above feature four legs and are composed of hexagonal graphene oxide which are highly magnetic, flexible and super strong.[1]

The following is the link for a video showing their activation triggered by electromagnetic (EMF) pulsating microwave frequencies:

[<https://rumble.com/vkm84h-is-nanobot-technology-or-artificial-intelligence-viable-inside-the-human-bo.html>] [2]

Nanoparticulates of Graphene Oxide – <https://forbiddenknowledgetv.net/dr-david-martin-just-ended-covid-fauci-doj-politicians-in-one-interview/>

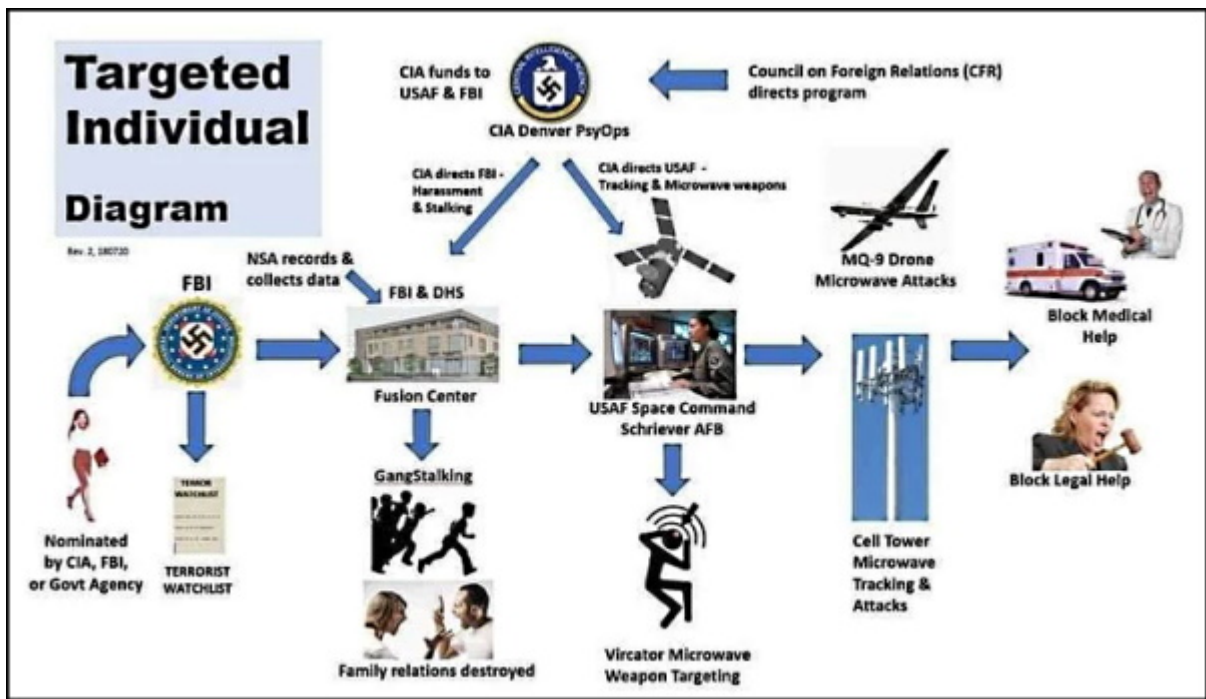

This enables the [nanobots](#) to carry a body weighing about 8,000 times more than each leg. As well, each leg measures only 100 atoms and even down to 1 atom thick, and they can carry bodies 1,000 to 100,000 times thicker.

Researchers have now developed 'smart' versions of these graphene nanobots. These versions feature controllers, sensors, transmitters and clocks.

The [graphene oxide nanobots](#) are powered by using magnetic fields (EMF) or ultrasound, making it possible for them to travel deeply into the human body tissues, organs and glands (such as the reproductive organs,[3] bone marrow, across the blood-brain barrier and the air-blood barrier of the lungs via the interstitial fluids – the largest organ of the human and animal body called the Interstitium[4]

The following flow-chart below is an example how **nanobots and EMF technology** can affect YOUR physical and mental health once you have been inoculated with the graphene oxide **nanobot** programmable technology or so-called 'vaccine' for protection from a phantom virus!

Please also read the following article on current vaccines and their contents/adjuvants, "Facts or VAXX" at the following link: <https://www.drrobertyoung.com/post/vaxx-the-real-facts>

Graphene Oxide [GO] resonants with all generations of EMG and especially magnetic fields of 41.3 GHz.

The following link is an interview of a former Pfizer employee and whistle blower concerning the contents/adjuvants of the CoV – 19 inoculation:
<https://rumble.com/vkgdq7-deadly-shots-former-pfizer-employee-confirms-poison-in-covid-vaccine.html?fbclid=IwAR30BXGBvoqSBNZ92AaiRjmXQc0Xa0ceBHtNifh6Tn05XsB2w8LweGIwkbA>

Who Is Ginkgo BioWorks and How Do They Fit in the Bio-Security, Transhumanist Agenda?

[Who Is Ginkgo BioWorks and How Do They Fit in the Bio-Security, Transhumanist Agenda?](#)

by [Derrick Broze](#), [The Last American Vagabond](#)

July 24, 2021

In May, biotech firm Ginkgo Bioworks announced it was going [public with a valuation of \\$15 billion](#). Ginkgo is a rising star in the biotechnology field, describing themselves as “The Organism Company”. While their name is less known than other biotech giants such as Monsanto and Bayer, the scope of their research and projects will likely affect billions of people around the world in coming years.

Ginkgo Bioworks was founded in 2009 by a group of MIT scientists focused on “engineering biology” for a variety of purposes. Officially, Ginkgo Bioworks “*designs, engineers, develops, tests and licenses organisms*”. The company [refers to their work](#) as “biology by design”, stating that they “*program cells to make everything from food to materials to therapeutics.*” Ginkgo’s researchers use genetic engineering to design and “print” new DNA for a range of organisms, including plants and bacteria. These organisms can then be licensed out for artificial flavors and sweeteners, cosmetic ingredients, crop treatments and pharmaceuticals.

What Ginkgo lacks in name recognition they make up for in financial investments. In March 2015, Ginkgo raised [\\$9 million](#) from investors during the company’s first significant fundraising round. A few months later they would receive another \$45 million from a group led by Viking Global Investors. Just 3 years ago, the company was [reportedly](#) valued at over \$1 billion after raising over \$429 million in funding from investors, including Cascade Investment.

In November 2020 the [U.S. government granted Ginkgo a \\$1.1 billion loan](#) for “*COVID-19 testing and the production of raw materials for therapies that may help address future pandemics*”.

Additionally, in October 2020, Allonnia, a company supported by investments in Ginkgo, launched [a \\$40 million effort](#) to study [wastewater](#). The announcement of a Ginkgo associated company studying wastewater came on the heels of

similar [announcements for “environmental surveillance” by the World Health Organization](#) as part of the fight against COVID-19.

[Allonnia](#) is the third company to launch out of Ginkgo Bioworks’ Ferment Consortium, a “\$350 million investment vehicle leveraging biology to solve global challenges and transform established industries”. Companies participating in the “Ferment Consortium” gain access to “*Ginkgo’s foundry for biological engineering, its iterative codebase model, and an extensive industry network of partners and investors*”.

Partners With Bill Gates and the World Economic Forum

In May, when Ginkgo Bioworks announced their public valuation and investments, the list of investors included Cascade Investment. Cascade is an investment company controlled by Bill Gates. The firm recently made headlines when it was [reported](#) that Bill Gates has used shell companies owned by Cascade to become the largest farmland owner in the United States.

Ginkgo Bioworks is listed as a [partner with the World Economic Forum](#), the organization behind [The Great Reset agenda](#).

Jason Kelly, CEO of Ginkgo, is also [listed as a partner](#) with the WEF. Ryan Morhard is Director of Policy and Partnerships at Ginkgo Bioworks and [listed as an author at the WEF](#). Before joining Ginkgo Bioworks, Ryan led the WEF’s work on global health security and biological risks. While it’s not fair to assume that every single company and person listed as a partner with the WEF is involved in The Great Reset efforts to transform humanity, it should encourage readers to remain skeptical of those associated with the WEF.

The relationship between the WEF and Ginkgo goes back to at least June 2016 when the “organism design company” was designated as one of the WEF’s Technology Pioneers, an award granted to the “world’s most innovative companies”. The [press](#)

[release](#) for the event states that Ginkgo was chosen by a professional jury and with their selection would “*have access to an influential and sought-after business and political network worldwide.*”

Further, Ginkgo is listed as a WEF partner as part of the “Shaping the Future of Advanced Manufacturing and Production” platform and the [“Shaping the Future of Health and Healthcare”](#) platform. Another investor in Ginkgo Bioworks – Viking Global Investors – is also [listed as a partner with the WEF](#), this time under the [Shaping the Future of Financial and Monetary Systems platform](#). These [platforms](#) were ostensibly launched by the WEF as a method for confronting societal issues while cooperating with organizations from a number of industries and governments. However, they appear to serve as roadmaps for the ways in which the Davos Class want to remake and reset the world in the coming years. The COVID Action Platform clearly outlines the post-pandemic world imagined by the WEF.

Given what we know about The Great Reset plan to remake all of society, it’s important to recognize that Ginkgo is one of dozens of companies chosen for such a partnership with the WEF. It’s also worth remembering that the WEF promotes themselves as the “international organization for public-private cooperation”, positioning their organization as a necessary conduit for partnerships between governments and private businesses.

Ginkgo Bioworks has expanded their operations via efforts like the aforementioned [Ferment Consortium](#), a “private investment vehicle for funding Ginkgo spinout companies with transformative potential in established industries”. Companies launched via the Consortium gain “*full access to Ginkgo’s platform for cell programming and the market expertise of leading strategic partners*”. According to the press release:

“In the past two years, Ginkgo launched [Joyn Bio](#) and [Motif](#)

[FoodWorks](#) on its platform for cell programming; Joyn launched in partnership with Bayer Crop Sciences with \$100 million in financing and Motif with \$90 million and strategic support from Fonterra and Louis Dreyfus Company. The \$350 million Ferment Consortium will enable Ginkgo to replicate more of these successes.”

Joyn Bio is focused on agriculture by developing microbes which lessen farmer dependence on synthetic nitrogen. Motif FoodWorks [says](#) they are “working towards a future where genetic engineering can help make foods that are sustainable, healthier, delicious, and accessible to everyone”. The work of Motif fits perfectly with the World Economic Forum’s push for [genetically engineered, lab grown foods](#).

In addition to the wastewater research and \$1.1 billion loan to Ginkgo Bioworks, the company has also played a role in testing for COVID-19 via [Coincentric](#), Ginkgo’s “public health and biosecurity” team. Coincentric has specifically been involved with developing tests for children in public schools.

An examination of Coincentric also yields connections worth exploring. For example, Dylan George recently joined Coincentric as Vice President of Business Development. A [press release regarding the announcement](#) notes that George has a “wealth of leadership and biosecurity experience”, including working with the U.S. government and as Vice President of the infamous In-Q-Tel, the CIA’s venture capital firm with ties to [Facebook’s founding](#). The release also notes that George worked as a “Senior Advisor for Biological Threat Defense” and within the Biomedical Advanced Research and Development Authority (BARDA), the health equivalent to the Military-Industrial Complex’s best friends, [DARPA](#).

In fact, Coincentric’s team is filled with an interesting cast of characters, including Lt. General Thomas P. Bostick, the 53rd Chief of Engineers of the United States Army and

Commanding General of the U.S. Army Corps of Engineers; Dr. Renee Wegrzyn, former DARPA Program Manager in the Biological Technologies Office and VP of Business Development with Ginkgo; and the previously mentioned Ryan Morhard, Ginkgo's Director of Policy and Partnership, who led the World Economic Forum's work on global health security and biological risks.

The presence of officials associated with the U.S. military, DARPA, the CIA, and the WEF is curious to say the least.

How Does Ginkgo Bioworks Fit in the Bio-Security, Transhumanist Agenda?

Ginkgo Bioworks says their goal is to build a "platform" which enables its customers to program cells as easily as we can program computers. The company's platform is playing a key role in expanding so-called biotechnology applications in the areas of food, agriculture, chemicals, and pharmaceuticals. It is indisputable that these types of technology which allow companies (and perhaps individuals) to "print" cells and DNA are all but inevitable at this point. It is also indisputable that these technologies do have the potential to do some good.

For example, [The Cronos Group, one of the benefactors of Ginkgo Bioworks' largesse](#), is attempting to use DNA sequences from cannabis plants to "build" high quality and pure strains of the medicinal plant. This could allow for medicines tailored to specific illnesses and needs. Still, with the wealth of connections uncovered in this cursory look into Ginkgo Bioworks we ought to remain skeptical.

What remains unclear is whether or not companies like Ginkgo Bioworks and their partners in the World Economic Forum imagine that society voluntarily and consensually transitions to the Brave New World they envision. Yes, the technologies can improve the state of the world and, perhaps, help the planet in the process, but who is making these decisions for the rest of humanity? Is the global population organically calling for the world the World Economic Forum hopes for? Or,

is this push for remaking and resetting society another scheme by the Predator Class at the top of [the pyramid?](#)

Without a doubt, [the Great Reset](#) is intended to transform our world, shifting it further into an AI-driven, Internet of Bodies, where human life can be altered (or ended) as simply as pressing the power button on a computer. Companies like Ginkgo hope to “hack” the genetic code so they can bend organic life to their will. Whatever positives may be gleaned from these efforts, the end result is the same: humanity aims to play God. *Now, should we be playing God in this fashion?*

The answer to that question will shape the future of humanity and the planet.

DNA Steganography and Cryptanalysis

[DNA Steganography and Cryptanalysis](#)

by [Joseph P. Farrell](#), [Giza Death Star](#)

July 14, 2021

Every now and then I get an article which is a real “whopper doozie,” and this is one of those times. In fact, this is not even an article at all, it’s a Ph.D. dissertation from 2015 that was spotted and shared by K.S., to whom a big thank you.

And before we get to the dissertation, a caveat: this is one of those things that’s so long I’ve not had time to read it in its entirety. In fact, I became stuck pondering just the implications of the opening paragraph, the abstract of the dissertation.

The dissertation title itself is a bit of a drag, as most dissertation titles are:

[A forensics software toolkit for DNA steganalysis.](#)

In case you don’t know what steganalysis is, it is related to steganography, which is the art of concealing a secret message or signal within something that has an entirely different public purpose, such as a picture or work of art, and so on. Steganalysis is simply unearthing that message and decoding it.

With that in mind, look at the opening paragraph:

Recent advances in genetic engineering have allowed the insertion of artificial DNA strands into the living cells of organisms. Several methods have been developed to insert information into a DNA sequence for the purpose of data storage, watermarking, or communication of secret messages. The ability to detect, extract, and decode messages from DNA is important for forensic data collection and for data security. We have developed a software toolkit

that is able to detect the presence of a hidden message within a DNA sequence, extract that message, and then decode it. The toolkit is able to detect, extract, and decode messages that have been encoded with a variety of different coding schemes. The goal of this project is to enable our software toolkit to determine with which coding scheme a message has been encoded in DNA and then to decode it. The software package is able to decode messages that have been encoded with every variation of most of the coding schemes described in this document. The software toolkit has two different options for decoding that can be selected by the user. The first is a frequency analysis approach that is very commonly used in cryptanalysis. This approach is very fast, but is unable to decode messages shorter than 200 words accurately. The second option is using a Genetic Algorithm (GA) in combination with a Wisdom of Artificial Crowds (WoAC) technique. This approach is very time consuming, but can decode shorter messages with much higher accuracy.

Now, one can only hope that the author of this dissertation, Marc B. Beck, obtained his PhD for his efforts.

What I found intriguing, however, were the philosophical underpinnings of this abstract, for they reminded me of other recent papers emphasizing the resemblance of the genetic code to artificial ciphers. Indeed, one of my friends was at one time a mathematician for Hewlett-Packard, and authored a few abstruse papers for a journal of cybernetics, one of which was precisely about the genetic code being a homophonic cipher. Some authors in the "new age" part of the alternative research community have also claimed that human DNA contains a "message."

It's with these ideas that today's high octane speculation is concerned. During the months of the planscamdemic, I and others watching the push to roll out mRNA injections have commented on an odd thing that has been reported in connection

with some adverse events, namely, the change in behaviour some recipients evidence after receiving them. One lady complained “they’ve killed God,” setting off a storm of speculation that connected dots to alleged Baal Gates lectures to the CIA, and so on.

But suppose, for a moment, that the genetic code *is* a message or at least contains a message. A number of questions immediately occur. Could a program of steganalysis – such as is being outlined in this dissertation – detect and decode it? Possibly. More importantly: has it already been done? If so, what was the message? And additionally, did the decoders *like* the message? The last question seems important to me because – going further out on the twig of speculation – it has been argued that the mRNA vaccines are really genetic “operating systems” capable of tinkering with DNA. I subscribe at least to the “operating system” view (see my *News and Views from the Nefarium*, July 8, 2021, or the following article:

<https://investors.modernatx.com/news-releases/news-release-details/darpa-awards-moderna-therapeutics-grant-25-million-develop>). So what if the mRNA injections are designed to be an operating system which in turn is designed to *scramble* the message or alter it altogether or at least, make it easier to alter? Or what if they’re a message in and of themselves? And if so, to whom...? Are these types of questions perhaps the real reason these highly experimental injections were *rushed* into production and “approval” without adequate intergenerational testing?

See you on the flip side...

The Evil Twins of Transhumanism and Technocracy

[The Evil Twins of Transhumanism and Technocracy](#)

by [Patrick Wood](#), [Technocracy News & Trends](#)

July 11, 2021

The dots between Technocracy and Transhumanism are easily connected once its understood that both sit atop the pseudo-science religion of Scientism, which posits that science is god and scientists and engineers are its priesthood. This article provides the current framework to understand this nexus.

Technocracy is to the transformation of society as Transhumanism is to the transformation of the human condition of people who would live in that society.

Both are underpinned by a religious belief known as Scientism that says that science is a god and that scientists, engineers and technologists are the priesthood that translates findings into practice.

It is a fatal error to equate Scientism with science. True science explores the natural world using the time-tested scientific method of repeated experimentation and validation. By comparison, Scientism is a speculative, metaphysical worldview about the nature and reality of the universe and man's relation to it.

Scientism refutes traditional religious views, morals and

philosophy and instead looks to science as the source for personal and societal moral value.

The relationship between Technocracy and Transhumanism can be seen as early as 1933 when Harold Loeb wrote *Life in a Technocracy: What It Might Be Like*:

“Technocracy envisages another form of domestication, a form in which man may become more than man... Technocracy is designed to develop the so-called higher faculties in every man and not to make each man resigned to the lot into which he may be born... Through breeding with specific individuals for specific purposes... A technocracy, then, should in time produce a race of men superior in quality to any now known on earth...”

Thus, Loeb saw Technocracy (the society) as producing a superior quality of man by applying advanced technology to the human condition.

The Nature Of Technocracy

Formalized in 1932 by scientists and engineers at Columbia University, the movement defined itself in a 1938 edition of its magazine, *The Technocrat*:

“Technocracy is the science of social engineering, the scientific operation of the entire social mechanism to produce and distribute goods and services to the entire population... For the first time in human history it will be done as a scientific, technical, engineering problem.”

Indeed, Technocracy was an economic system based on science and social engineering. Technocrats were so certain that their scientific approach was so righteous that there would be no need for any political structures whatsoever:

“There will be no place for Politics, Politicians, Finance or Financiers, Rackets or Racketeers... Technocracy will distribute by means of a certificate of distribution available to every citizen from birth to death.”

Today, Technocracy is embodied in the World Economic Forum's **Great Reset** and the various United Nations' manifestations of Sustainable Development: Agenda 21, 2030 Agenda, New Urban Agenda, etc.

The Nature Of Transhumanism

A philosophical mainstay of modern Transhumanism, Max More, defined it in 1990 as:

"...a class of philosophies of life that seek the continuation and acceleration of the evolution of intelligent life beyond its currently human form and human limitations by means of science and technology, guided by life-promoting principles and values."

The means to the end is ultimately genetic engineering that takes over and speeds up evolution theory to create humanity 2.0.

Since the advent of CRISPR gene-editing technology, Transhumans have saturated universities and private corporations to modify all categories of living things, including humans.

What is preached as the preservation of biodiversity by the United Nations is really the takeover of genetic material, which was noted as early as 1994, just two years after the debut of Sustainable Development and Agenda 21 at the UN Conference on Economic Development (UNCED) in Rio de Janeiro, Brazil.

The 1994 book, *The Earth Brokers*, was written by two principal participants in the Rio process who did not blindly swallow what had just happened. They noted two things about the biodiversity convention that 156 nations of the world adopted:

"The convention implicitly equates the diversity of life – animals and plants – to the diversity of genetic codes, for which read genetic resources. By doing so, diversity becomes

something modern science can manipulate... the convention promotes biotechnology as being 'essential for the conservation and sustainable use of biodiversity.'"

Secondly, they noted that "the main stake raised by the biodiversity convention is the issue of ownership and control over biological diversity... the major concern was protection of the pharmaceutical and emerging biological industries."

It is little wonder today that the pharmaceutical industry is producing gene therapy shots using genetically modified RNA to transform the body's immune system. They have been working hard since 1992 to advance the technology needed to hijack the human genome and begin the transformative pathway to Humanity 2.0.

However, it is Technocracy that has used its "science of social engineering" techniques to manipulate twenty-two percent of the world's population into willingly accepting the transhumans' gene altering injections.

The Great Reset Embraces Both Technocracy and Transhumanism

It has been noted in many professional journals that the World Economic Forum and its founder/spokesman Klaus Schwab, are promoting both Technocracy and Transhumanism at the same time. In light of this article, this should not be surprising.

The European Academy on Religion and Society (EARS), for instance, wrote that:

"...the highly influential members of the World Economic Forum have a plan for what should come next. It is called 'The Great Reset', and it envisions a truly 'transhumanist' future for us all... Since mid-2020, the WEF has been promoting its vision for our post-coronavirus future, which they call 'The Great Reset'. In their view, the pandemic has exposed the weaknesses of our old system, and therefore presents a perfect

opportunity to 'reset' our world and start anew. What is striking about this plan, which the WEF has condensed into a virus-shaped mindmap, is its implicit endorsement of a philosophy called 'transhumanism'. (emphasis added)

As initially stated, "Technocracy is to the transformation of society as Transhumanism is to the transformation of the human condition of people who would live in that society."

In conclusion, the evil twins of Technocracy and Transhumanism, along with their underlying religion of Scientism, need to be recognized for what they are but most importantly, they must be resisted and rejected with every fiber of our being.

A “Leap” Toward Humanity’s Destruction

[A “Leap” Toward Humanity’s Destruction](#)

The world’s richest medical research foundation, the Wellcome Trust, has teamed up with a pair of former DARPA directors who built Silicon Valley’s skunkworks to usher in an age of nightmarish surveillance, including for babies as young as three months old. Their agenda can only advance if we allow it.

by [Whitney Webb](#), [Unlimited Hangout](#)

June 25, 2021

A UK nonprofit with ties to global corruption throughout the COVID-19 crisis as well as [historical and current ties](#) to the UK eugenics movement launched a global health-focused DARPA equivalent last year. The move went largely unnoticed by both mainstream and independent media.

The Wellcome Trust, which has arguably been second only to Bill Gates in its ability to influence events during the COVID-19 crisis and vaccination campaign, launched its own global equivalent of the Pentagon's secretive research agency last year, officially to combat the "most pressing health challenges of our time." Though first conceived of in 2018, this particular Wellcome Trust initiative was [spun off from the Trust last May](#) with \$300 million in initial funding. It quickly attracted two former DARPA executives, who had previously served in the upper echelons of Silicon Valley, to manage and plan its portfolio of projects.

This global health DARPA, known as Wellcome Leap, seeks to achieve "breakthrough scientific and technological solutions" by or before 2030, with a focus on "complex global health challenges." The Wellcome Trust is [open about](#) how Wellcome Leap will apply the approaches of Silicon Valley and venture capital firms to the health and life science sector. Unsurprisingly, their three current programs are poised to develop incredibly invasive tech-focused, and in some cases overtly transhumanist, medical technologies, including a program exclusively focused on using artificial intelligence (AI), mobile sensors, and wearable brain-mapping tech for children three years old and younger.

This *Unlimited Hangout* investigation explores not only the four current programs of Wellcome Leap but also the people behind it. The resulting picture is of an incredibly sinister

project that poses not only a great threat to current society but to the future of humanity itself. An upcoming *Unlimited Hangout* investigation will examine the history of the Wellcome Trust along with its role in recent and current events.

Leap's Leadership: Merging Man and Machine for the Military and Silicon Valley

The ambitions of the Wellcome Leap are made clear by the woman chosen to lead it, former director of the Pentagon's DARPA, Regina Dugan. Dugan [began her career at DARPA](#) in 1996; she led a counterterrorism task force in 1999 before leaving DARPA about a year later. After departing DARPA, she cofounded her own venture capital firm, Dugan Ventures, and then became special adviser to the US Army's vice chief of staff from 2001 to 2003, which coincided with the invasions of Afghanistan and Iraq. In 2005, she created a defense-focused tech firm called RedXDefense, which contracts with the military and specifically for DARPA.

In 2009, under the Obama administration, Dugan was [appointed director of DARPA](#) by Defense Secretary Robert Gates. Much was made over her being the first female director of the agency, but she is best remembered at the agency for her so-called "Special Forces" approach to innovation. During her tenure, she created DARPA's now defunct [Transformational Convergence Technology Office](#), which focused on social networks, synthetic biology, and machine intelligence. Many of the themes previously managed by that office are now overseen by DARPA's Biological Technologies Office, which was created in 2014 and [focuses on](#) everything "from programmable microbes to human-machine symbiosis." The Biological Technologies Office, like Wellcome Leap, pursues a mix of "health-focused" biotechnology programs and transhumanist endeavors.

Right before leaving the top role at DARPA, Dugan [greenlighted the agency's initial investments in mRNA vaccine technology](#), which led to DARPA's investments in [Pfizer](#) and [Moderna](#) shortly

thereafter. The DARPA scientist who lobbied Dugan to back the program, [Dan Wattendorf](#), now works as the director of Innovative Technology Solutions at the Bill & Melinda Gates Foundation.

While Dugan's efforts at DARPA are remembered fondly by those in the national-security state, and also by those in Silicon Valley, Dugan was investigated for conflicts of interest during her time as DARPA's director, as her firm RedXDefense acquired millions in Department of Defense contracts during her tenure. Though she had recused herself from any formal role at the company while leading DARPA, she continued to hold a significant financial stake in the company, and a military investigation [later found](#) she had violated ethics rules to a significant degree.

Instead of being held accountable in any way, Dugan went on to become a top executive at Google, where she was brought on to manage Google's [Advanced Technology and Products Group](#) (ATAP), which it had spun out of Motorola Mobility after Google's acquisition of that company in 2012. Google's ATAP was modeled after DARPA and employed other ex-DARPA officials besides Dugan.

At Google, Dugan oversaw several projects, including what is now the basis of Google's "augmented reality" business, then known as [Project Tango](#), as well as ["smart" clothing](#) in which multitouch sensors were woven into textiles. Another project that Dugan led involved the use of a ["digital tattoo"](#) to unlock smartphones. Perhaps most controversially, Dugan was also behind the creation of a "digital authentication pill." [According to Dugan](#), when the pill is swallowed, "your entire body becomes your authentication token." Dugan framed the pill and many of her other efforts at Google as working to fix "the mechanical mismatch between humans and electronics" by producing technology that merges the human body with machines to varying degrees. While serving in this capacity at Google, Dugan [chaired a panel](#) at the 2013 Clinton Global

Initiative called “Game-Changers in Technology” and [attended the 2015 Bilderberg meeting](#) where AI was a main topic of discussion.

In 2016, Dugan left Google for Facebook where she was chosen to be the first head of Facebook’s own DARPA-equivalent research agency, then known as Building 8. DARPA’s ties to the origins of Facebook were discussed in a [recent Unlimited Hangout report](#). Under Dugan, Building 8 invested heavily in brain-machine interface technology, which has since produced the company’s “neural wearable” wristbands that claim to be able to anticipate movements of the hand and fingers from brain signals alone. Facebook [showcased prototypes](#) of the project earlier this year.

Dugan left Facebook just eighteen months after joining Building 8, [announcing her plans](#) “to focus on building and leading a new endeavor,” which was apparently a reference to Wellcome Leap. Dugan [later said](#) it was as if she had been training for her role at Wellcome Leap ever since entering the workforce, framing it as the pinnacle of her career. When asked in [an interview](#) earlier this year who the clients of Wellcome Leap are, Dugan gave a long-winded answer but essentially responded that the project serves the biotech and pharmaceutical industries, international organizations such as the UN, and public-private partnerships.

In addition to her role at Wellcome, Dugan is also [a member](#) of the Council on Foreign Relations-sponsored taskforce on US Technology and Innovation policy, which was formed in 2019. Other members include LinkedIn’s [Reid Hoffman](#), McKinsey Institute Global Chairman [James Manyika](#), former head of Google [Eric Schmidt](#) and President Biden’s controversial top science adviser [Eric Lander](#).

The other executive at Wellcome Leap, chief operating officer [Ken Gabriel](#), has a background closely tied to Dugan’s. Gabriel, like Dugan, is a former program manager at DARPA,

where he led the agency's microelectromechanical systems (MEMS) research from 1992 to 1996. He served as deputy director of DARPA from 1995 to 1996 and became director of the Electronics Technology Office from 1996 to 1997, where he was reportedly responsible for about half of all federal electronics-technology investments. At DARPA, Gabriel worked closely with the FBI and the CIA.

Gabriel left DARPA for Carnegie Mellon University, where he was in charge of the Office for Security Technologies in the aftermath of September 11, 2001. That office was [created after 9/11](#) specifically to help meet the national-security needs of the federal government, according to Carnegie Mellon's announcement of the program. Around that same time, Gabriel became regarded as "the architect of the MEMS industry" due to his past work at DARPA and his founding of the MEMS-focused semiconductor company Akustica in 2002. He served as Akustica's chairman and chief technology officer until 2009, at which time he returned to work at DARPA where he served as the agency's deputy director, working directly under Regina Dugan.

In 2012, Gabriel followed Dugan to Google's Advanced Technology and Products Group, which he was actually responsible for creating. [According to Gabriel](#), Google cofounders Larry Page and Sergey Brin tasked Gabriel with creating "a private sector ground-up model of DARPA" out of Motorola Mobility. Regina Dugan was placed in charge, and Gabriel again served as her deputy. In 2013, Dugan and Gabriel co-wrote a piece for [the Harvard Business Review](#) about how DARPA's "Special Forces" innovation approach could revolutionize both the public and private sectors if more widely applied. Gabriel left Google in 2014, well before Dugan, to serve as the president and CEO of Charles Stark Draper Laboratories, better known as Draper Labs, which develops "innovative technology solutions" for the national-security community, with a focus on biomedical systems,

energy, and space technology. Gabriel held that position until he [abruptly resigned](#) in 2020 to co-lead Wellcome Leap with Dugan.

In addition to his role at Wellcome, Gabriel is also a World Economic Forum “[technology pioneer](#)” and on [the board of directors](#) of Galvani Bioelectronics, a joint venture of GlaxoSmithKline, which is intimately linked to the Wellcome Trust, and the Google subsidiary Verily. [Galvani](#) focuses on the development of “bioelectronic medicines” that involve “implant-based modulation of neural signals” in an overt push by the pharmaceutical industry and Silicon Valley to normalize transhumanist “medicines.” The longtime chairman of the board of Galvani, on which Gabriel serves, was Moncef Slaoui, who led the US COVID-19 vaccine development and distribution program Operation Warp Speed. Slaoui was [relieved of his position](#) at Galvani this past March over well-substantiated claims of sexual harassment.

Jeremy Farrar, Pandemic Narrative Manager

While Dugan and Gabriel ostensibly lead the outfit, Wellcome Leap is the brainchild of Jeremy Farrar and Mike Ferguson, who serve as its directors. Farrar is the director of the Wellcome Trust itself, and Ferguson is deputy chair of the Trust’s board of governors. [Farrar](#) has been director of the Wellcome Trust since 2013 and has been actively involved in critical decision making at the highest level globally since the beginning of the COVID crisis. He is also an [agenda contributor](#) to the World Economic Forum and [cochaired](#) the WEF’s Africa meeting in 2019.

Farrar’s Wellcome Trust is also a WEF strategic partner and [cofounded](#) the COVID Action Platform with the WEF. Farrar was more recently behind the creation of Wellcome’s [COVID-Zero initiative](#), which is also tied to the WEF. Farrar has framed that initiative as “an opportunity for companies to advance the science which will eventually reduce business disruption.”

Thus far it has convinced titans of finance, including Mastercard and Citadel, to invest millions in research and development at organizations favored by the Wellcome Trust.

Some of Wellcome's controversial medical-research projects in Africa, as well as its ties to the UK eugenics movement, were explored in a December article published at [Unlimited Hangout](#). That report also explores the intimate connections of Wellcome to the Oxford-AstraZeneca COVID-19 vaccine, the use of which has now been restricted or banned in several countries. As mentioned in the introduction, the Wellcome Trust itself is the subject of an upcoming *Unlimited Hangout* investigation (Part 2).

Jeremy Farrar, who was born in Singapore in 1961, had previously been director of the [Oxford University Clinical Research Unit in Ho Chi Minh City](#), beginning in 1998. During that time, he authored numerous epidemiological research papers. He claimed in a [2014 Financial Times article](#) that his decision to move to Vietnam was due to his disdain for conference halls full of white men. Southeast Asia was obviously a much less regulated environment for someone in the medical-research industry wishing to indulge in groundbreaking research. Although based in Vietnam, Farrar was sent by Oxford to various locations around the globe to study epidemics happening in real time. In 2009, when swine flu was wreaking havoc in Mexico, Farrar [jumped on a plane](#) to dive right into the action, something he also did for subsequent global outbreaks of [Ebola](#), [MERS](#), and [avian flu](#).

Over the past year, many questions have arisen regarding exactly how much power Farrar wields over global public health policy. Recently, the US president's chief medical adviser, Anthony Fauci, was forced to release his [emails and correspondence](#) from March and April 2020 at the request of the *Washington Post*. The released emails reveal what appears to be a high-level conspiracy by some of the top medical authorities in the US to falsely claim that COVID-19 could

only have been of zoonotic origin, despite indications to the contrary. The emails were heavily redacted as such emails usually are, supposedly to protect the information of the people involved, but the “(b)(6)” redactions also protect much of Jeremy Farrar’s input into these discussions. Chris Martenson, economic researcher and post-doctorate student of neurotoxicology and founder of Peak Prosperity, has had some insightful comments on the matter, including asking [why](#) such protection has been offered to Farrar given that he is the director of a “charitable trust.” Martenson went on to question why the Wellcome Trust was involved at all in these high-level discussions.

One Fauci email, dated February 25, 2020, and sent by Amelie Rioux of the WHO, stated that Jeremy Farrar’s official role at that time was “to act as the board’s focal point on the COVID-19 outbreak, to represent and advise the board on the science of the outbreak and the financing of the response.” Farrar [had previously chaired](#) the WHO’s Scientific Advisory Council. The emails also show the preparation, within a ten-day period, of the SARS-CoV-2 “[‘origins’ paper](#),” which was entitled “The Proximal Origin of SARS-CoV-2” and was accepted for publication by *Nature Medicine* on March 17, 2020. The paper claimed that the SARS-CoV-2 virus could only have come from natural origins as opposed to gain-of-function research, a claim once held as gospel in the mainstream but which has come under considerable scrutiny in recent weeks.

Shaping the presentation of an origin story for a virus of global significance is something Farrar has been involved with before. In 2004–5, [it was reported](#) that Farrar and his Vietnamese colleague Tran Tinh Hien, the vice director at the Hospital for Tropical Diseases, were the first to identify the re-emergence of the avian flu (H5N1) in humans. Farrar has recounted the origin story on many occasions, stating: “It was a little girl. She caught it from a pet duck that had died and she’d dug up and reburied. She survived.” According to Farrar,

this experience prompted him to found a global network in conjunction with the World Health Organization to “improve local responses to disease outbreaks.”

An article published by Rockefeller University Press’s *Journal of Experimental Medicine* in 2009 is dramatically titled, “Jeremy Farrar: When Disaster Strikes.” Farrar, when referring to the [H5N1 origin story](#) stated: “The WHO people—and this is not a criticism—decided it was unlikely that the child had SARS or avian influenza. They left, but Professor Hien stayed behind to talk with the child and her mum. The girl admitted that she had been quite sad in the previous days with the death of her pet duck. The girl and her brother had fought over burying the duck and, because of this argument, she had gone back, dug up the duck, and reburied it—probably so her brother wouldn’t know where it was buried. With that history, Professor Hien phoned me at home and said he was worried about the child. He took some swabs from the child’s nose and throat and brought them back to the hospital. That night the laboratory ran tests on the samples, and they were positive for Influenza A.”

With Farrar now having been revealed as an instrumental part of the team that crafted the official story regarding the origins of SARS-CoV-2, his previous assertions about the origin of past epidemics should be scrutinized.

As the director of a “charitable trust,” Jeremy Farrar is almost completely unaccountable for his involvement in crafting controversial narratives related to the COVID crisis. He continues to be at the forefront of the global response to COVID, in part by launching the [Wellcome Leap Fund](#) for “unconventional projects, funded at scale” as an overt attempt to create a global and “charitable” version of DARPA. Indeed, Farrar, in conceiving Wellcome Leap, has positioned himself to be just as, if not more, instrumental in building the foundation for the post-COVID era as he was in building the foundation for the COVID crisis itself. This is significant as

Wellcome Leap CEO Regina Dugan [has labeled](#) COVID-19 this generation's "Sputnik moment" that will launch a new age of "health innovation," much like the launching of Sputnik started a global technological "space age." Wellcome Leap fully intends to lead the pack.

"Rulers" of the Gene-Sequencing Industry

In contrast to the overt DARPA, Silicon Valley, and Wellcome connections of the others, the chairman of the board of directors of Wellcome Leap, Jay Flatley, has a different background. Flatley is the long-time head of Illumina, a California-based gene-sequencing hardware and software giant that is believed to currently dominate the field of genomics. Though he stepped down from the board of Illumina in 2016, he has continued to serve as the executive chairman of its board of directors. Flatley was the first to be chosen for a leadership position at Wellcome Leap, and he was responsible for suggesting Regina Dugan for the organization's chief executive officer, according to [a recent interview](#) given by Dugan.

As [a profile](#) on Illumina in the business magazine *Fast Company* notes, Illumina "operates behind the scenes, selling hardware and services to companies and research institutions," among them 23andMe. 23andMe's CEO, Anne Wojcicki, the sister of YouTube CEO Susan Wojcicki and the wife of Google cofounder Sergey Brin, told *Fast Company*, "It's crazy. Illumina is like the ruler of this whole universe and no one knows that." The report notes that 23andMe, like most companies that offer DNA sequencing and analysis to consumers, uses machines produced by Illumina.

In 2016, Illumina launched [an "aggressive" five-year plan](#) to "bring genomics out of research labs and into doctors' offices." Given the current state of things, particularly the global push toward gene-focused vaccines and therapies, that plan, which concludes this year, could not have been any

better timed. Illumina's current CEO, Francis DeSouza, [previously held](#) key posts at Microsoft and Symantec. Also in 2016, Illumina's executive teams forecast a future in which humans are gene tested from birth to grave for both health and commercial purposes.

Whereas most companies have struggled financially during the coronavirus pandemic, some have seen a massive increase in profits. [Illumina](#) has witnessed its [share price double](#) since the start of the COVID crisis. The company's \$1 billion plus in profits during the last tax year was obviously helped by the quick approval of the [NovaSEQ 6000 machines](#), which can test a [large number of COVID samples](#) more quickly than other devices. An individual machine has a hefty price tag of almost \$1 million, and thus they are mostly found at [elite facilities](#), [private labs](#), and [top-tier universities](#).

In addition to his long-standing leadership role at Illumina, Jay Flatley is also a "[digital member](#)" of the World Economic Forum as well as the [lead independent director](#) of Zymergen, a WEF "tech pioneer" company that is "rethinking biology and reimagining the world." Flatley, who has also attended several Davos meetings, [has addressed](#) the WEF on the "promise of precision [i.e., gene-specific] medicine." At [another WEF panel meeting](#), Flatley, alongside UK Health Secretary Matt Hancock, promoted the idea of making genomic sequencing of babies at birth the norm, claiming it had "the potential to shift the healthcare system from reactive to preventative." Some at the panel called for the genomic sequencing of infants to eventually become mandatory.

Aside from Flatley as an individual, Illumina as a company is [a WEF partner](#) and plays a key role in its platform regarding the future of health care. A top Illumina executive [also serves](#) on the WEF's Global Future Council on Biotechnology.

A New HOPE

Wellcome Leap currently has four programs: Multi-Stage Psych, Delta Tissue, 1KD, and HOPE. [HOPE](#) was the first program to be announced by Wellcome Leap and stands for Human Organs, Physiology and Engineering. According to the full program description, HOPE aims “to leverage the power of bioengineering to advance stem cells, organoids, and whole organ systems and connections that recapitulate human physiology *in vitro* and restore vital functions *in vivo*.”

HOPE consists of [two main program goals](#). First, it seeks to “bioengineer a multiorgan platform that recreates human immunological responses with sufficient fidelity to double the predictive value of a preclinical trial with respect to efficacy, toxicity and immunogenicity for therapeutic interventions.” In other words, this bioengineered platform mimicking human organs would be used to test the effects of pharmaceutical products, including vaccines, which could create a situation in which animal trials are replaced with trials on gene-edited and farmed organs. Though such an advance would certainly be helpful in the sense of reducing often unethical animal experimentation, trusting such a novel system to allow medical treatments to go straight to the human-testing phase would also require trusting the institutions developing that system and its funders.

As it stands now, the Wellcome Trust has too many ties to corrupt actors in the pharmaceutical industry, having originally begun as the “philanthropic” arm of UK drug giant GlaxoSmithKline, for anyone to trust what they are producing without actual independent confirmation, given the histories of some of their partners in fudging both animal and human clinical trial data for vaccines and other products.

The second goal of HOPE is to open up the use of machine-human hybrid organs for transplantation into human beings. That goal focuses on restoring “organ functions using cultivated organs

or biological/synthetic hybrid systems” with the later goal of bioengineering a fully transplantable human organ after several years.

Later on in the program description, however, the interest in merging the synthetic and biological becomes clearer when it states: “The time is right to foster synergies between organoids, bioengineering and immunoengineering technologies, and advance the state-of-the-art of *in vitro* human biology . . . by building controllable, accessible and scalable systems.” The program description document also notes the interest of Wellcome in genetic-engineering approaches for the “enhancement of desired properties and insertion of traceable markers” and Wellcome’s ambition to reproduce the building blocks of the human immune system and human organ systems through technological means.

Transhumanist Toddlers?

The second program to be pursued by Wellcome Leap is called “[The First 1000 Days: Promoting Healthy Brain Networks](#),” which is abbreviated as 1KD by the organization. It is arguably the most unsettling program because it seeks to use young children, specifically infants from three months to three-year-old toddlers, as its test subjects. The program is being overseen by [Holly Baines](#), who previously served as strategy development lead for the Wellcome Trust before joining Wellcome Leap as the 1KD program leader.

[1KD is focused on](#) developing “objective, scalable ways to assess a child’s cognitive health” by monitoring the brain development and function of infants and toddlers, allowing practitioners to “risk-stratify children” and “predict responses to interventions” in developing brains.

The program description document notes that, up to this point in history, “our primary window into the developing brain has been neuroimaging techniques and animal models, which can help identify quantitative biomarkers of [neural] network health

and characterise network differences underlying behaviours.” It then states that advances in technology “are opening additional possibilities in young infants.”

The program description goes on to say that artificial neural networks, a form of AI, “have demonstrated the viability of modelling network pruning process and the acquisition of complex behaviours in much the same way as a developing brain,” while improvements in machine learning, another subset of AI, can now be used to extract “meaningful signals” from the brains of infants and young children. These algorithms can then be used to develop “interventions” for young children deemed by other algorithms to be in danger of having underdeveloped brain function.

The document goes on to note the promise of “low-cost mobile sensors, wearables and home-based systems” in “providing a new opportunity to assess the influence and dependency of brain development on natural physical and social interactions.” In other words, this program seeks to use “continuous visual and audio recordings in the home” as well as wearable devices on children to collect millions upon millions of data points. Wellcome Leap describes these wearables as “relatively unobtrusive, scalable electronic badges that collect visual, auditory and motion data as well as interactive features (such as turn-taking, pacing and reaction times).” Elsewhere in the document there is a call to develop “wearable sensors that assess physiological measures predictive of brain health (e.g., electrodermal activity, respiratory rate, and heart rate) and wireless wearable EEG or eye-tracking technology” for use in infants and children three and under.

Like other Wellcome Leap programs, this technology is being developed with the intention of making it mainstream in medical science within the next five to ten years, meaning that this system—although framed as a way to monitor children’s brain functioning to improve cognitive outcomes—is a recipe for total surveillance of babies and very young

children as well as a means for altering their brain functioning as algorithms and Leap's programmers see fit.

1DK has two main program goals. The first is to "develop a fully integrated model and quantitative measurement tools of network development in the first 1000 days [of life], sufficient to predict EF [executive function] formation before a child's first birthday." Such a model, the description reads, "should predict contributions of nutrition, the microbiome and the genome" on brain formation as well as the effects of "sensimotor and social interactions [or lack thereof] on network pruning processes" and EF outcomes. The second goal makes it clear that widespread adoption of such neurological-monitoring technologies in young children and infants is the endgame for 1DK. It states that the program plans to "create scalable methods for optimising promotion, prevention, screening and therapeutic interventions to improve EF by at least 20% in 80% of children before age 3."

True to the eugenicist ties of the Wellcome Trust (to be explored more in-depth in Part 2), Wellcome Leap's 1DK notes that "of interest are improvements from underdeveloped EF to normative or from normative to well-developed EF across the population to deliver the broadest impact." One of the goals of 1DK is thus not treating disease or addressing a "global health public challenge" but instead experimenting on the cognitive augmentation of children using means developed by AI algorithms and invasive surveillance-based technology.

Another unsettling aspect of the program is its plan to "develop an *in vitro* 3D brain assembloid that replicates the time formation" of a developing brain that is akin to the models developed by monitoring the brain development of infants and children. Later on, the program description calls this an "*in-silico*" model of a child's brain, something of obvious interest to transhumanists who see such a development as a harbinger of the so-called [singularity](#). Beyond that, it appears that this *in-silico* and thus synthetic model of the

brain is planned to be used as the “model” to which infant and children brains are shaped by the “therapeutic interventions” mentioned elsewhere in the program description.

It should be clear how sinister it is that an organization that brings together the worst “mad scientist” impulses of both the NGO and military-research worlds is openly planning to conduct such experiments on the brains of babies and toddlers, viewing them as datasets and their brains as something to be “pruned” by machine “intelligence.” Allowing such a program to advance unimpeded without pushback from the public would mean permitting a dangerous agenda targeting society’s youngest and most vulnerable members to potentially advance to a point where it is difficult to stop.

A “Tissue Time Machine”

The third and second-most recent program to join the Wellcome Leap lineup is called [Delta Tissue](#), abbreviated by the organization as ΔT . Delta Tissue aims to create a platform that monitors changes in human-tissue function and interactions in real time, ostensibly to “explain the status of a disease in each person and better predict how that disease would progress.” Referring to this platform as a “tissue time machine,” Wellcome Leap sees Delta Tissue as being able to predict the onset of disease before it occurs while also allowing for medical interventions that “are targeted to the individual.”

Well before the COVID era, precision medicine or medicine “targeted or tailored to the individual” has been a code phrase for treatments based on patients’ genetic data and/or for treatments that alter nucleic acid (e.g., DNA and RNA) function itself. For instance, the US government [defines “precision medicine” as](#) “an emerging approach for disease treatment and prevention that takes into account individual variability in genes, environment, and lifestyle for each person.” Similarly, [a 2018 paper](#) published in *Technology* notes

that, in oncology, “precision and personalized medicine . . . fosters the development of specialized treatments for each specific subtype of cancer, based on the measurement and manipulation of key patient genetic and omic data (transcriptomics, metabolomics, proteomics, etc.).”

Prior to COVID-19 and the vaccine roll outs, the mRNA vaccine technology used by the DARPA-funded companies Moderna and Pfizer were marketed as being [precision medicine treatments](#) and were largely referred to as “[gene therapies](#)” in media reports. They were also promoted heavily as a revolutionary method of treating cancer, making it unsurprising that the Delta Tissue program at Wellcome Leap would use a similar justification to develop a program that aims to offer tailored gene therapies to people *before* the onset of a disease.

[This Delta Tissue platform](#) works to combine “the latest cell and tissue profiling technologies with recent advances in machine learning,” that is, AI. Given Wellcome Leap’s connections to the US military, it is worth noting that the [Pentagon and Google](#), both former employers of Wellcome Leap CEO Regina Dugan and COO Ken Gabriel, have been working together since last September on using AI to predict disease in humans, first focusing on cancer before expanding to COVID-19 and every disease in between. The Delta Tissue program appears to have related ambitions, as its program description makes clear that the program ultimately aims to use its platform for a host of cancers and infectious diseases.

The ultimate goal of this Wellcome Leap program is “to eradicate the stubbornly challenging diseases that cause so much suffering around the world.” It plans to do this through AI algorithms, however, which are never 100 percent accurate in their predictive ability, and with gene-editing treatments, nearly all of which are novel and have not been well tested. That latter point is important given that one of the main

methods for gene-editing in humans, CRISPR, has been found in numerous studies to cause considerable damage to the DNA, damage that is largely irreparable (see [here](#), [here](#) and [here](#)). It seems plausible that a person placed on such a hi-tech medical treatment path will continue to need a never-ending series of gene-editing treatments and perhaps other invasive hi-tech treatments to mitigate and manage the effects of clumsy gene splicing.

Total Surveillance to Treat “Depression”

Wellcome Leap’s most recent program, launched just this week, is called “[Multi-Channel Psych: Revealing Mechanisms of Anhedonia](#)” and is officially focused on creating “complex, biological” treatments for depression.

Those behind Wellcome Leap [frame the problem](#) they aim to tackle with this program as follows:

*“We understand that synaptic connections serve as the currency of neural communication, and that **strengthening or weakening these connections can facilitate learning new behavioral strategies and ways of looking at the world.** Through studies in both animal models and humans, we have discovered that emotional states are encoded in complex neural network activity patterns, and that directly changing these patterns **via brain stimulation** can shift mood. We also know that disruption of these delicately balanced networks can lead to neuropsychiatric illness.” (emphasis added)*

They add that “biologically based treatments” for depression “are not being matched to the biology of the human beings they’re being used in,” and, thus, treatments for depression need to be tailored “to the specific biology” of individual patients. They clearly state that what needs to be addressed in order to make such personal modifications to treatment is to gain “easy access to the biological substrate of depression—i.e. the brain.”

Wellcome Leap's [program description](#) notes that this effort will focus specifically on anhedonia, which it defines as "an impairment in the effort-based reward system" and as a "key symptom of depression and other neuropsychiatric illnesses." Notably, in the fine print of the document, Wellcome Leap states:

"While there are many definitions of anhedonia, we are less interested in the investigation of reduced consummatory pleasure, the general experience of pleasure, or the inability to experience pleasure. Rather, as per the description above, we will prioritize investigations of anhedonia as it relates to impairments in the effort-based reward system—e.g. reduced motivation to complete tasks and decreased capacity to apply effort to achieve a goal."

In other words, Wellcome Leap is only interested in treating aspects of depression that interfere with an individual's ability to work, not in improving an individual's quality or enjoyment of life.

Leap notes, in discussing its goals, that it seeks to develop models for how patients respond to treatments that include "novel or existing behavior modification, psychotherapy, medication, and neurostimulation options" while also capturing an individual's "genome, phenome [the sum of an individual's phenotypic traits], [neural] network connectivity, metabolome [the sum of an individual's metabolic traits], microbiome, reward processing plasticity levels," among others. It ultimately aims to predict the relationship between an individual's genome to how "reward processing" functions in the brain. It implies that the data used to create this model should involve the use of wearables, stating that researchers "should seek to leverage high frequency patient-worn or in-home measurements in addition to those obtained in the clinic, hospital or laboratory."

One of the main research areas included in the program looks to “develop new scalable measurement tools for reliable and high-density quantification of mood (both subjectively reported and objectively quantified via biometrics such as voice, facial expression, etc.), sleep, movement, reward system functioning, effort/motivation/energy levels, social interaction, caloric intake, and HPA axis output in real-world situations.” [The HPA \(hypothalamic-pituitary-adrenal\) axis](#) is mentioned throughout the document, and this is significant as it is both a negative and positive feedback system regulating the mechanisms of stress reactions, immunity, and also fertility in the human body. The latter is especially important given the Wellcome Trust’s ties to the UK eugenics movement. It is also worth noting that some commercially available wearables, such as [Amazon’s Halo](#), already quantify mood, sleep, and movement.

The program’s authors go even further than the above in terms of what they wish to monitor in real time, stating, “We specifically encourage the development of non-invasive technology to directly interrogate human brain state.” Examples include “a non-invasive spinal tap equivalent,” “behavioral or biomarker probes of neural plasticity,” and “single-session neural monitoring capabilities that define a treatment-predictive brain state.”

In other words, this Wellcome Leap program and its authors seek to develop “non-invasive” and, likely, wearable technology capable of monitoring an individual’s mood, facial expressions, social interactions, effort and motivation, and potentially even thoughts in order to “directly interrogate human brain state.” To think that such a device would stay only in the realm of research is naive, especially given that WEF luminaries [have openly spoken at Davos meetings](#) about how governments plan to use such technology widely on their populations as a means of pre-emptively targeting would-be dissent and ushering in an era of “digital dictatorships.”

The focus on treating only the aspects of depression that interfere with a person's work further suggests that such technology, once developed, would be used to ensure "perfect worker" behavior in industries where human workers are rapidly being replaced with AI and machines, meaning the rulers can be more selective about which people continue to be employed and which do not. Like other Wellcome Leap programs, if completed, the fruits of the Multi-Channel Psych program will likely be used to ensure a population of docile automatons whose movements and thoughts are heavily surveilled and monitored.

The Last Leap for an Old Agenda

Wellcome Leap is no small endeavor, and its directors have the funding, influence, and connections to make their dreams reality. The organization's leadership includes the key force behind Silicon Valley's push to commercialize transhumanist tech (Regina Dugan), the "architect" of the MEMS industry (Ken Gabriel), and the "ruler" of the burgeoning genetic-sequencing industry (Jay Flatley). It also benefits from the funding of the world's largest medical-research foundation, the Wellcome Trust, which is also one of the leading forces in shaping genetics and biotechnology research as well as health policy globally.

A [1994 Sunday Times investigation](#) into the Trust noted that "through [Wellcome Trust] grants and sponsorships, government agencies, universities, hospitals and scientists are influenced all over the world. The trust distributes more money to institutions than even the British government's Medical Research Council."

It then notes:

"In offices on the building's first floor, decisions are reached that affect lives and health on scales comparable with minor wars. In the conference room, high above the street, and in the meeting hall, in the basement, rulings in biotechnology and genetics are handed down that will help

shape the human race.”

Little has changed regarding the Trust’s influence since that article was published. If anything, its influence on research paths and decisions that will “shape the human race” has only grown. Its ex-DARPA officials, who have spent their careers advancing transhumanist technology in both the public and private sectors, have overlapping goals with those of Wellcome Leap. Dugan’s and Gabriel’s commercial projects in Silicon Valley reveal that Leap is led by those who have long sought to advance the same technology for profit and for surveillance. This drastically weakens Wellcome Leap’s claim to now be pursuing such technologies to only improve “global health.”

Indeed, as this report has shown, most of these technologies would usher in a deeply disturbing era of mass surveillance over both the external and internal activities of human beings, including young children and infants, while also creating a new era of medicine based largely on gene-editing therapies, the risks of which are considerable and also consistently downplayed by its promoters.

When one understands the intimate bond that has long existed between eugenics and transhumanism, Wellcome Leap and its ambitions make perfect sense. In a recent article written by John Klyczek for [Unlimited Hangout](#), it was noted that the first director general of UNESCO and former president of the UK Eugenics Society was Julian Huxley, who coined the term “transhumanism” in his 1957 book [New Bottles for New Wine](#). As Klyczek wrote, Huxley argued that “the eugenic goals of biologically engineering human evolution should be refined through transhumanist technologies, which combine the eugenic methods of genetic engineering with neurotech that merges humans and machines into a new organism.”

Earlier, in 1946, Huxley [noted in his vision for UNESCO](#) that

it was essential that “the eugenic problem is examined with the greatest care and that the public mind is informed of the issues at stake so that much that is now unthinkable may at least become thinkable,” an astounding statement to make so soon after the end of World War II. Thanks in large part to the Wellcome Trust and its influence on both policy and medical research over the course of several decades, Huxley’s dream of rehabilitating eugenics-infused science in the post-World War II era could soon become reality. Unsurprisingly, the Wellcome Trust [hosts the archive](#) of the formerly Huxley-led Eugenics Society and [still boasts close ties](#) to its successor organization, the Galton Institute.

The over-riding question is: Will we allow ourselves to continue to be manipulated into allowing transhumanism and eugenics to be openly pursued and normalized, including through initiatives like those of Wellcome Leap that seek to use babies and toddlers as test subjects to advance their nightmarish vision for humanity? If well-crafted advertising slogans and media campaigns painting visions of utopia such as “a world without disease” are all that is needed to convince us to give up our future and our children’s future to military operatives, corporate executives, and eugenicists, then there is little left of our humanity to surrender.

Author’s note: Johnny Vedmore contributed to this report.

Covid Vaccines: Designed for Depopulation?

[Covid Vaccines: Designed for Depopulation?](#)

AP, Boston Globe, October 10, 1992, "Birth-control vaccine is reported in India": "Scientists said yesterday they have created the first birth-control shot for women, effective for an entire year...[after which] a booster shot is needed."

by [Jon Rappoport](#), [No More Fake News](#)

June 15, 2021

Dr. Byram Bridle, Associate Professor of Viral Immunology, University of Guelph: "We made a big mistake; we didn't realize it until right now, we thought the spike protein was a great target antigen, we never knew that the spike protein itself was a toxin...and was a pathogenic protein. So by vaccinating people, we are inadvertently inoculating them with a toxin, and [for] some people, this gets in the circulation and when that happens in some people, it can cause damage, especially to the cardiovascular system. I have many other legitimate questions about the long-term safety therefore of this vaccine. FOR EXAMPLE, WITH IT ACCUMULATING WITHIN THE OVARIES, ONE OF MY QUESTIONS IS, WILL WE BE RENDERING YOUNG PEOPLE INFERTILE?" (emphasis mine)

[In yesterday's article](#), I outlined possible parallels between population-reduction vaccines and the current COVID vaccines, which are causing bleeding, irregular menstrual cycles, miscarriages, and pre-term births.

Elite depopulation research, involving vaccines, has a long history, leading up to this day.

The Task Force on Vaccines for Fertility Regulation was created at the World Health Organization in 1973. Ute Sprenger, writing in *Biotechnology and Development Monitor* (December 1995) describes the Task Force:

“...a global coordinating body for anti-fertility vaccine R&D...such as anti-sperm and anti-ovum vaccines...”

Sprenger indicates that, as of 1995, there were a number of large groups researching these vaccines. Among them:

WHO/HRP. HRP, the Special Programme of Research, Development and Research Training in Human Reproduction, is located in Switzerland. It is funded by “the governments of Sweden, United Kingdom, Norway, Denmark, Germany and Canada, as well as the UNFPA and the World Bank.”

The Population Council, a US group funded by the Rockefeller Foundation, the National Institutes of Health [a US federal agency], and the US Agency for International Development [notorious for its collaborations with the CIA].

National Institute of Immunology. Located in India, “major funders are the Indian government, the Canadian International Development Research Center and the [ubiquitous] Rockefeller Foundation.”

The Center for Population Research operates under the umbrella of the US National Institute of Child Health and Development [!], which is part of the US National Institutes of Health.

Over time, the names of these groups change; their goal remains the same. Depopulation through vaccination. And of course, it doesn't take long to find the name, Bill Gates, as a funding source.

To provide background on this long-term operation, it's

necessary to understand the vision of arch Globalists and radical environmentalists. (I'm not talking about environmental groups who simply want to combat major corporate polluters.)

If you demonstrated that the most advanced waste incinerators could burn all the organic and inorganic garbage piling up in landfills around the world and in the oceans—including plastics—and the toxic compounds emitted by these incinerators would cause FAR LESS damage than the landfills and the ocean plastic dumps...

And even if you advocated the incinerators as stop-gap solutions, until better answers could be found...

A radical environmentalist would reject your proposal—and any technological fix—out of hand.

He wants to re-forest the entire planet, reduce the human population to a fraction of its current size, and cede police powers for achieving these objectives to a magical global governance body.

Elite Globalists approve of radical environmentalism—but with a twist. They want a technocratic Brave New World, where those humans allowed to survive would be genetically “improved” and controlled, to keep them from exercising a dangerous item called freedom.

The Globalists and the radical environmentalists agree that there are too many people on Earth; and no solution to human problems can be accomplished, given the current (excess) population. Instead of 7 billion people, they want a human race of a billion or five hundred million.

Both groups also agree that the fake science of climate change should be pushed to the limit, in order to impose energy-use quotas on every human. This program would actually lower energy use and production across the world and create massive

poverty and a massive die-off.

For decades, elite Globalists have been asking themselves the question: How do you kill billions of people and get away with it?

One of their prime answers has been: pandemics.

Of course, the true pandemic is the response to the fake pandemic: vaccines.

If, in the long-term, vaccines can induce the inability to produce children, the genocide would be invisible.

A combination of truth and lies—issued as ongoing studies and press reports—would “explain” falling birth rates. E.g., climate change, extreme weather, pesticides, women opting out of motherhood for careers, economic downturns, fear of raising children in a world of increasing dangers, etc.

But behind it all—vaccines.

Preliminary animal studies of COVID RNA technology are reporting that the spike protein travels through the body, far beyond expected destinations. Applied to humans, this would mean the immune system is on full-attack mode against the protein. And THAT opens the door to immune-system rejection on a grand scale—the body basically assaults itself and its organs. The targets of assault could very well include tissues of the womb and a developing embryo.

The current claim that ongoing COVID booster shots will be necessary reinforces this scenario.

In medical, psychological, and sociological literature, the nasty direct term, “eugenics,” has been replaced by a softer vaguer one, “family planning.” The new term is designed to hide the true agenda.

For Globalists and radical environmentalists, the unparalleled

success of the propaganda operation called COVID assures vaccinations on a scale never achieved before. It also assures the expansion of RNA technology—new vaccines and drugs which are genetic treatments designed to force the body to produce unnatural proteins.

There is no end to the genetic alterations to which humans can be subjected.

It stands to reason, given the history of research on depopulation vaccines, that some of those alterations are, and will be, aimed at cutting off the ability to procreate.

June 5, 2021

Haven't heard of The Great Convergence yet? Oh, it's just the plan to merge biology with digital technology and redefine what it means to be human, that's all. Today on the podcast James covers the biodigital convergence that is already being rolled out and what it means for the future of *homo sapiens*.

Generation Robot

[Generation Robot](#)

by [Rosanne Lindsay](#), Naturopath, [Nature of Healing](#)
May 21, 2021

If you recently accepted an experimental injection, you may be experiencing strange physical adverse effects at the injection site, throughout your body, and in relationship to your electronic devices.

You may be connecting to your surroundings in *new and improved* ways.

Are you a direct connection to Bluetooth?

Are you questioning who you are?

Since each person is unique, some adverse effects will manifest differently. But other effects may be eerily in synch. Best to be aware of any changes as you notice them, since there is no trial data with which to compare. You are the experiment.

This is not about retribution. This matter is going forward – we are in a live exercise here to get this right.

– [Mike Pompeo, US Secretary of State disclosed](#) from the White House when he stated that COVID-19 is a live military exercise.

[[Blue Tooth.mp4/Vimeo](#)]

If you recently accepted an experimental injection, you may have noticed that many “adverse side effects” are really “direct effects” and that these effects are being normalized. Do you experience problems with menstrual cycle? Mysterious rashes? Miscarriages? Infertility? Blood clots? Ringing in the ears? Fever, Headache, Fatigue? You will be told that [the vaccine is working properly](#). What you may not be told is that the covid vaccine [does not seem to protect people with immune](#)

[disorders](#).

What about unusual effects?

Do magnets stick to your body?

Can radiation detectors pick up levels of EMFs at the site of injection?

Can your veterinarian's chip scanner go off if you get too close when taking your pet for a check up?

Are you giving off high levels of electromagnetic frequencies (EMFs)?

Connectivity Effects

The only way to find out if COVID vaccinated people are emitting high levels of radiation is to measure the emissions and document the readings. Important information would include: 1) vaccine maker, 2) date of injection, 3) level of radiation identified at injection site, 4) levels of radiation identified at other sites in the body, 5) Bluetooth connectivity to electronic devices.

It would also be prudent to test the differences between a test group (vaccinated) and the control group (unvaccinated). How do the levels compare? Do some samples show that the vaccinated emit EMF readings ten times higher than the unvaccinated? Do they emit more than their [cell phone](#)?

Can the vaccinated synch up with unvaccinated people similar to iphones? Or do you need to have the software built in?

Can these emissions affect the unvaccinated through transference?

What might cause the release of EMFs or radiation?

Experimental trials are happening now, in vivo, on the human population. Very few answers are available, but the science

has already been done.

NanoMagnetic Human Studies

Generally, the nanomaterials pose many new questions on risk assessment that are not yet completely answered. Thus, a reliable risk assessment related to human health and environment and safety evaluation of these materials should be performed for all in vivo studies.

Prior to the live exercise *in vivo*, scientists studied the unknowns of using magnetic nanotechnology. One 2010 study, published in [Pharm Res](#) concluded with a warning:

What do we know?

Nanoparticles in the body act as receivers and transmitters so they are traceable by scanners. They are also responsive to an outside source of radiation, such as a 5G tower and its frequencies. Functioning as magnetic chips in the body, nanoparticles could also leave human behavior open to be modified (i.e., mind control). For more on nanobots, and how they self-replicate in the body, read [The Nanobot Evolution](#).

The technology of the COVID experimental injections are tied to MagnetoDNA from research on a molecular scale. MagnetoDNA can be injected into the genome of a virus and injected into animals to manipulate neuronal activity.

Several studies have shown that nerve cell proteins which are [activated by heat, designer drugs, and mechanical pressure](#) “can be genetically engineered so that they become sensitive to radio waves and magnetic fields, by attaching them to an iron-storing protein called ferritin, or to inorganic paramagnetic particles.”

Studies of drug delivery systems using magnetic fluids and nanobots have been ongoing since at least 2006. See study titled, [“Using these magnetic forces to enhance non-viral gene](#)

[transfer to airway epithelium in vivo](#)”... Ie., real people who have taken the vaccine.

In 2010, a US government website, Library of Medicine, [“Application of Magnetic Nanoparticles in Pharmaceutical Sciences... including Vaccines”](#) published the following on magnetic fluids injected into the body via vaccines:

They are also called ferrofluids or magnetic fluids, meaning colloidal suspensions of magnetic particles in a liquid carrier. Generally, these particles are part of nanotechnology, which can be defined as engineering of functional systems on a molecular scale.

[Ferrofluid was developed in the early 1960s by Steve Papell](#), an engineer at Lewis Research Center, now Glenn Research Center. He discovered a way to disperse magnetic nanoparticles in rocket fluid as a way to draw it from a storage tank into an engine in the absence of gravity. A few years later, a company called Avco Space Systems won a NASA contract to further characterize and develop ferrofluid and created a variety of liquids that ranged up to 10 times the magnetic strength of the initial Lewis invention.

If iron particles are clumping at the site of injection, could they be clumping elsewhere in the body to cause blood clots? Would ferrofluids flowing in the human body emit high levels of radiation, internally and externally, as it travelled? Would this radiation affect others in close proximity? Would it be transferred through bodily fluids? Breathing? Sex? Would it connect you to the internet?

In 2021, these studies are focusing on [Manipulative Magnetic Nanomedicine](#) that purport to be the answer to all the lab-created viral epidemics (such as H1N1, H5N1, human immunodeficiency virus (HIV), Ebola, Zika, and coronavirus) that “created deadly infections associated with severe acute respiratory syndrome.”

To control or to be controlled? That is the question.

An article from the Guardian suggests that [Genetically engineered 'Magneto' protein remotely controls brain and behaviour.](#)

Nanobot technology is run by Artificial Intelligence. With the added electromagnetic tech integrated into human DNA, it is possible that mRNA ferroproteins in injections are giving off high amounts of EMF frequencies, to both control other electronic devices, while also being controlled by outside EMF sources.

What does it mean?

The Internet of Things Changing Humanity

Did you think 5G was for faster downloads and higher definition? Think again. The Internet of Things seeks to make humans part of the worldwide web by connecting the human neural system to the grid. By your consent to be injected, you sign up for connectivity. But there is still more to come. Read about how [ultrafine threads can be woven into your brain](#), as part of the Neuralink, for more details.

Electromagnetic nanobots, once deployed in your body, can become [activated by external electromagnetic transmissions](#), such as 5G, through your skin.

Evidence for this can be found in [a patent](#) using pulsed frequencies that can cause deep subliminal skin temperature oscillations that can induce sleepiness, drowsiness, relaxation, a tonic smile, ptosis of the eyelids, a tense feeling, sudden loose stool, or sexual excitement, depending on the precise pulse frequency used. For certain higher frequencies, the induced subliminal skin temperature oscillations cause fractured thought and a slowing of certain cortical processes.

The 5G frequencies are microwaves that affect water, with

humans comprising 99.9% water on a molecular level. 5G microwaves have already been used to control human behavior as crowd control technology as [directed energy weaponry by the military](#). None of this tech is new.

Energy as weaponry has been used as infrasound and ultrasound going back to World War II. For more than fifty years, DARPA and the CIA have developed infrasound technology, such as [the infrasonic brainwave amplifier](#), to manipulate the human brain and nervous system, and to cause physical pain without detection. [American diplomats in Cuba were victims of infrasonic devices](#). [Project Soul Catcher](#) is a 'no touch torture' used to silence Americans by government. [A list of energy weapon](#) patents shows the breadth of uses against humans. [Pulsative manipulation of the Nervous system](#) is one such patent.

On the positive side, whales use infrasound waves to communicate with each other since the sound can travel hundreds of miles. Might be a good idea to learn telepathy.

Aside from external threats of frequency manipulation, there is the threat of an internal army of tiny robots deployed in the privacy of your body. Nanobots inside the body means there is no privacy and no self-control. A bio-invasion of nanobots also eliminates autonomy over your mind even though government agencies already have the ability to decipher human thoughts via [patent 4,877,027](#).

Nanobots in your DNA via viral mRNA (Covid injection) represent a genetic bioweapon attack on the human landscape; body, mind, and spirit, at the nanoscopic level. From November 2012, [The Atlantic reports](#):

genetic bio-weapons able to target a single human being based on their DNA. The authors paint a scenario of the development of a virus that causes only mild flu in the general population but when the virus crosses paths with cells containing a very

specific DNA sequence, the sequence would act as a molecular key to unlock secondary functions that would trigger a fast-acting neuro-destructive disease that produces memory loss and, eventually, death.

The Pentagon's research arm claims agricultural nanobots are intended to defend crops, but doesn't deny 'dual-use' potential as biological weaponry. On another level, it could represent the creation of a whole new species.

Got Bot Brain?

Can the 5G network activate the bots to turn your cells on, then turn them off? Does the network feed off of your energy? Are you a generator for the Internet of Things? Have you noticed the 5G towers on school grounds and 5G fins atop water towers? Are your thoughts not your own? Will you hear other people's ideas echo in your head? Have your memories been erased? Is your fertility being erased? Are you hackable? Will others be the first to notice your odd behavior? Does your Bot Brain hookup to your computer? Your refrigerator? To Google? All of the above?

With Bot Brain, there is no need to think for yourself. The Internet of Things (IoT) can do that for you, wherever you are.

With the mask charade ending, and people directed to remove the identify concealment device, is it time to be fitted for a tin foil hat?

[The Borg of the Star Trek The Next Generation series](#) are considered the greatest enemies of the crew of the Starship Enterprise and the Federation (i.e., humans). The Borg absorbs you and erases your identify. It's famous quote: *Resistance is futile, you will be assimilated*. Later in the series of six Borg episodes, the Borg became infected with a sense of individuality, showing that nothing is set in stone and anything is possible.

How will the current episode during this live exercise play out? Will you be assimilated into the Robot Generation? Or, as a report by Armstrong Economics states, [Resistance is Not Futile, only 37.5% of Americans are vaccinated.](#)

**Biodigital Convergence:
Bombshell Document Reveals
the True Agenda**

"They are working toward the elimination of homo sapiens. The mRNA injections are just the thinnest edge of the wedge that will eventually involve the wholesale transformation of humanity into something else entirely. And at precisely the point that we allow the precedent to be set that governments can mandate the forced injection of unknown biomedical technologies in the name of a declared health "crisis," Orwell's nightmare of a boot stamping on the human face forever is transformed from a dark warning about a possible future to a virtual certainty." ~ James Corbett

[Biodigital Convergence: Bombshell Document Reveals the True Agenda](#)

by [James Corbett](#), [The Corbett Report](#)

May 15, 2021

If you have not read "[Exploring Biodigital Convergence](#)" yet, I suggest you stop what you're doing and read it now. Seriously. I'll wait. . . .

. . . And now that you're back, I'm sure you'll agree with me that this is important stuff. Are you ready to talk about it?

OK, let's dig in.

The first thing to note about this revealing document is that it is an official Government of Canada publication. More specifically, it is from "[Policy Horizons Canada](#)," which [describes itself](#) as "a federal government organization that conducts foresight." Clear as mud? Well, apparently their mandate is "to help the Government of Canada develop future-

oriented policy and programs that are more robust and resilient in the face of disruptive change on the horizon," and they are a government "foresight center," complete with a "Chief Futurist" and a team of "Foresight Analysts" who work in the Government of Canada's first "innovation lab" producing regular "[MetaScans](#)" on topics of interest to the government, including "behavioural insights and experimentation."

If that sounds like a lot of federal bureaucratic gobbledygook designed to obfuscate the fact that this is just a government think tank that talks about future trends and developments, then don't worry. That's exactly what it is.

The second thing you'll notice about the document is the smirking face of Kristel Van der Elst, who, we are told, is Director General of Policy Horizons Canada and the erstwhile author of this document's foreword. Three seconds of searching will reveal that Ms. Van der Elst is the former Head of Strategic Foresight at (you guessed it) [the World Economic Forum](#), whose globalist bingo card is almost as impressive as Dr. Leana Wen's. In addition to being intimate with the Davos crowd, she's also a Fulbright Scholar who went to Yale, Special Advisor to European Commission Vice-President Maroš Šefčovič, and, in addition to heading up Policy Horizons Canada, is also a fellow at the Center for Strategic Foresight of the U.S. Government Accountability Office. Quelle surprise.

So what does Van der Elst say in her foreword?

In the coming years, biodigital technologies could be woven into our lives in the way that digital technologies are now. **Biological and digital systems are converging**, and could change the way we work, live, and even evolve as a species. More than a technological change, this biodigital convergence may transform the way we understand ourselves and **cause us to redefine what we consider human or natural** [all emphases in this article are mine].

Guess what, guys? I have just found my go-to synopsis for when I'm asked to explain the great reset and the fourth industrial revolution in a nutshell. Right there in a few short, crisp sentences, is exactly what I've been warning about regarding [the transhumanist agenda](#) for 13 years now. But in the true spirit of the open conspiracy, since this is a bland admission from a senior government think tank worker it will undoubtedly be viewed as a boring, self-evident truth by the normies who seek to find a way to downplay the *coming extinction of the human race*.

From there, things only get weirder.

The document goes on to outline "Three ways biodigital convergence is emerging," namely:

1. **Full physical integration** of biological and digital entities;
2. **Coevolution** of biological and digital technologies; and
3. **Conceptual convergence** of biological and digital systems,

Please re-read that list in case you didn't grasp its significance the first time. But in case you *didn't* catch the importance of those trends, the report then provides some concrete examples of each.

Regarding the "Full physical integration of biological and digital entities," the document notes:

Robots with biological brains and biological bodies with digital brains already exist, as do human-computer and brain-machine interfaces. The medical use of digital devices in humans, as well as **digitally manipulated insects such as drone dragonflies and surveillance locusts**, are examples of digital technology being combined with biological entities. By **tapping into the nervous system and manipulating neurons**, tech can be added to an organism to alter its function and purpose. **New human bodies and new senses of identity could arise** as the

convergence continues.

With regard to the “Coevolution of biological and digital technologies,” we are told that there is “a blurring between what is considered natural or organic and what is digital, engineered, or synthetic.”

For example, biosynthetic vanilla is created using ferulic acid, eugenol, and glucose as substrates, and bacteria, fungi, and yeasts as microbial production hosts. Although it does not come from a vanilla plant, under both U.S. and EU food legislation, its production from “microbial transformations of natural precursors” allows it to be labelled as a “natural flavoring”.

And in elaboration of the “Conceptual convergence of biological and digital systems,” the authors of this report opine that:

As we continue to better understand and control the mechanisms that underlie biology, we could see **a shift away from vitalism – the idea that living and nonliving organisms are fundamentally different** because they are thought to be governed by different principles. Instead, **the idea of biology as having predictable and digitally manageable characteristics may become increasingly common** as a result of living in a biodigital age. Any student of biology today will have grown up in a digital world and may consciously or subconsciously apply that frame of reference to bioinformatics and biology generally.

Are you getting a sense of where this is going yet? *Do not* gloss over this material and *do not* take it in stride. A government think tank is openly talking about the blurring of the lines between biological and digital systems, *between living and nonliving organisms*, and how this could lead to “new human bodies” and new senses of human identity. The transhumanist plan to effect the extinction of *homo sapiens* is

being calmly discussed and dissected as if it's just another technological breakthrough by the scientific boffins.

Do *not* allow your normalcy bias to take over here. This is *insanity*.

But wait! It gets even more insane!

Next we're treated to some cyberpunk fan fiction by the frustrated sci-fi writer wannabes at Policy Horizons Canada. In a bizarre narrative entitled "Good morning, biodigital" we are guided through a typical day in the life of an average post-human in this biodigital nightmare state. Here's a representative passage:

The summary of my bugbot surveillance footage shows that my apartment was safe from intruders (including other bugbots) last night, but it does notify me that my herd of little cyber-dragonflies are hungry. They've been working hard collecting data and monitoring the outside environment all night, but the number of mosquitoes and lyme-carrying ticks they normally hunt to replenish their energy was smaller than expected. With a thought, I order some nutrient support for them.

As an English major, my first thought is: Don't quit your day job, whichever "Foresight Analyst" wrote this turgid piece of expository inanity. But as a connoisseur of transhumanist propaganda, I feel I must note that this depiction of the future dystopia hits every item in the globalists' Agenda 2030 wish list:

People rounded up into dense urban environments and placated with digital facsimiles of the natural world? Check.

Smart technology monitoring everything we do and making all of our key decisions for us? Check.

Brief glimpses of the threat that such technology poses to us

(intruder bugbots and the like) being immediately dispelled by careful elaboration of all the amazing things that this whiz-bang technology can do (like growing a liver for a local puppy as a school project)? Check.

A helpful italicized note at the end to inform us that *“This story may sound far-fetched, however all the technologies mentioned exist in some form today”*? Of course that’s a check.

Next, in a display of textual whiplash typical of these report-by-committee documents, we are brought back to the question of “What new capabilities arise from biodigital convergence.” This time, the information is presented to us in the form of a table that lists:

“What new capabilities are opening up?” (e.g., “New ways to monitor, manage, and influence bodily functions, as well as predict, diagnose, and treat disease”),

“What combinations of biological and digital technologies allow this?” (e.g., “Gene sequencing entire samples helps us understand complex environments such as the human microbiome; Digital devices can be worn or embedded in the body to treat and monitor functionality; and Machine learning systems can predict mortality and treatment outcomes”), and

“What is possible today?” (e.g., “[Guardant’s liquid biopsy](#) proves more accurate and faster than tissue biopsy in patients with lung cancer; University of Waterloo researchers develop a [self-powering sensor for medical monitoring](#); Amazon patent will [allow Alexa to detect a cough or a cold](#); AI gives [reliable coma outcome prediction](#).”)

The third column is especially enlightening for those who might have missed some of the latest developments in biodigital technology, like [Microsoft’s demonstration of the first fully automated DNA data storage system](#) or the [use of CRISPR to build dual-core computers inside human cells](#).

Next, we are treated to a section analyzing the “possible characteristics of the biodigital system” that assures us that these technologies will be democratizing; after all, “mail-order bioengineering or CRISPR kits allow biohackers to purchase and practice genetic alteration at home.” (Surely these technologies will be evenly distributed to Joe Schmoe and definitely not hoarded and used by the intelligence agencies of the world against their nations’ own populations, right?)

The crack “Foresight Analysts” behind this document even try to make the case that these technologies will be decentralizing by citing—of all things—lab-grown meat, since this will create “the ability to create food and engineer meat without the need for arable land.” So wait, instead of anyone, anywhere being able to literally throw seeds in the ground and reap the rewards, they will now need access to complex and costly laboratory equipment to “grow” their food. And this is intended to decentralize food production? [There’s a meme for that.](#)

Finally, the document goes on to explore the policy implications of these technologies. I’m sure you can pick out the gems from this section yourself, but my favourites include the “neurotech nightmare” scenario that they paint in their sidebar on “The future ain’t what it used to be” (which, observant readers will note, is eerily similar to the “Carrot Rewards” Canadian social credit precursor I talked about in these pages [four years ago](#)).

Now there are many, many things that need to be said about this document, but let’s boil it down to a few takeaways.

Firstly, given the document’s repeated insistence on the usefulness of these biodigital technologies for preventing, tracking, diagnosing and treating pandemic diseases, it is interesting to note that the report was released in February of 2020, meaning it was penned long before the COVID scamdemic

had been foisted on the Canadian public.

Secondly, and more importantly, it provides yet more confirmation (if any were needed) that the would-be social engineers are not just working toward but actively planning for *the extinction of homo sapiens*. Read the document. This is not hyperbole. They are literally talking about the redefinition of what it means to be human. This is yet more of the Eloi and Morloch-style bifurcation of humanity that those crazy conspiracy theorists at the BBC were talking about [15 years ago](#) and that tinfoil nutter Klaus Schwab has been writing about for [5 years](#).

Don't fall into the trap of debating whether you think this or that particular technology that they are trying to sell as part of this transhumanist vision of the future will or will not come to fruition. They would love to get you hung up in endless and pointless arguments about [whether a toaster has a soul](#) while they're busy rolling out the [integrated brain-machine interface platforms](#) and releasing the [biodigital locust swarms](#) and creating [fully synthetic bioengineered life forms](#).

These things are *already happening*.

And while I've intimated before that I believe the "we'll all upload our consciousness to a computer and explore the universe through a robot avatar" hype about the transhuman future is indeed nonsense that is being sold to the mid-level stewards of the technocratic state in order to motivate them, we must not lose sight of the fact that the transhumanists are in fact actively working to alter humanity in such a way that it is not truly human anymore.

In fact, the "transhumanists" are revealed as post-humanists, with a very real anti-human lust. That lust is being openly revealed in documents like this one. We dismiss this open and admitted threat to the human species at our own peril.

They are working toward the elimination of *homo sapiens*. The mRNA injections are just the [thinnest edge of the wedge](#) that will eventually involve the wholesale transformation of humanity into something else entirely. And at precisely the point that we allow the precedent to be set that governments can mandate the forced injection of unknown biomedical technologies in the name of a declared health “crisis,” Orwell’s nightmare of a boot stamping on the human face forever is transformed from a dark warning about a possible future to a virtual certainty.

You have been warned. I suggest you warn others. But let me make a bold prediction of my own: Many will choose to dismiss this information using the very type of self-deception that I described at the end of [last week’s article](#).

The Spatial Web and the Birth of the Borg

[The Spatial Web and the Birth of the Borg](#)

by [Joseph P. Farrell](#), [Giza Death Star](#)

February 22, 2021

This strange article – shared by U. to whom a big thank you – at first did not capture my imagination. I read it, thinking, “oh this is just a typical paean of praise to the wonderful world of digitech we’re entering,” and as such, it didn’t really capture my imagination. It was the usual loosey-goosey stuff about how wonderful it will be to be interconnected, and how dangerous a time it is that we’re entering, but it also presents a golden opportunity for us to make it a better world. I think you get the idea, and most of us have probably read articles like this before...

...Insert group hug, kumbaya, and jonquils and daisies here.

But then, as I was half-reading and half-skimming, my mind caught something that said “Whoa! Go back! Read that again, and *pay attention* this time!” It was a bit of carefully disguised transhumanism. Here’s the article, and see if you catch it too:

[An Introduction to The Spatial Web](#)

Now perhaps if you’re like me, the mad and insane rush of some people to embrace the transhumanist goal of human-machine integration will have made you focus on various paragraphs in this paean of praise. But here’s the ones that woke me up:

*The Spatial Web weaves together all of the digital and physical strands of our future world into the fabric of a new universe where next-gen computing technologies generate a unified reality; **where our digital and physical lives become one**. This is a new kind of network, not merely one of interconnected computers like the original Internet or a network of interlinked pages, text, and media like the World Wide Web but rather a “living network” made up of the interconnections between people, places, and things, their virtual counterparts, and the interactions, transactions and transportation between them. Like the World Wide Web before it, this new Spatial Web requires new code to bring it to*

life. Not merely software code, but critically, ethical, and social codes as well.

Today, we can't share knowledge all that effectively because we cannot share our mental models and maps of the world directly between brains. We can't copy/paste ideas and concepts between ourselves, much less create, edit, or share them with AI, or IoT devices.

But what if we had the technology to collaborate with machines and artificial intelligence to share collective 3D models and maps of our experience and knowledge directly? Instead of being locked in our Private VR we could share in a kind of multi-dimensional Public AR – a digitally-mediated consensus reality – an idea as exciting as it is concerning. However, using Distributed Ledger technologies like Blockchain could enable us to reliably verify factual data about the world while enabling the freedom to collaboratively explore, edit, mashup, and remix reality. These technologies could help us confirm the difference between the real and the “projected,” between the empirically valid and the creatively expressed, providing us an Augmented Intelligent Reality.

The power of the Spatial Web initially comes from its ability to describe the world in the language that the world speaks to us in – geometry. The Spatial Web lets us use a digitally-mediated universal language in which all information can become spatial. It enables the current information on the web to be placed spatially and contextually on objects and at locations, where we can interact with information in the most natural and intuitive ways, by merely looking, speaking, gesturing, or even thinking. But it also enables the digital to be more physical as sensors and robotics become embedded into our environments and onto the objects around us. It makes our world smarter as it adds intelligence and context to any place, any object, and every person that we encounter, and it allows our relationships with each other and this new network to be more trustworthy, more secure, and faster by

*decentralizing and distributing the computing and storage of the data. It will enable us to accelerate and improve, augment and enhance every facet of our existence – our education, our creativity, our health, our businesses, our legal system, our politics, and our ecologies. **The Spatial Web has the potential to move us from predominantly egocentric and ethnocentric concerns to more worldcentric ones that are more holistic, equitable, and inclusive.** (Boldface emphasis added)*

Note the ending on all the required cliches: “holistic” and “equitable” and “inclusive” and “egocentric” and “ethnocentric” march across the page in a parade of progressive pabulum to make us feel better about all this. He might have thrown some flower petals – jonquils and daisies will do – to give it that touch of “nature” and “innocence.” Huzzah! a utopian world of “interconnectedness” dawns before us.

But I rather suspect that behind the word “egocentric” lie the words “personhood” and “individuality” and which includes all the things that come with them, like creativity, personality, and (here’s a big one), responsibility. Similarly, behind the word “ethnocentric” come other concepts, like tradition, heritage or culture. Thus, the move is really away from personhood and away from that peculiar type of interconnectedness called heritage, tradition, culture. Those are, you’ll note, very human things.

What we’re being asked to contemplate is rather a world where “our digital and physical lives become one,” where everyone shares “collective 3D models and maps of our experience and knowledge directly” so that “instead of being locked in our Private (Virtual reality) we could share in a kind of multi-dimensional... digitally-mediated consensus reality.” Even the author of this has to admit this is “an idea as exciting as it is concerning.” Ahhh... but wait! There’s good news. We might

be able to avoid "all that is 'concerning'" by (here comes more onanistic prose) "using Distributed Ledger technologies like Blockchain" which "could enable us to reliably verify factual data about the world while enabling the freedom to collaboratively explore, edit, mashup, and remix reality."

Uh huh... So imagine a world like this, where everyone's thoughts are open to everyone else in the waking world. I'm reminded of the *Star Trek* concept of the Borg, a collective hive where each individual hears – *constantly* – the interior conversations of every other member of the hive. It's a world where there is constant noise, endless chatter, and no *rest* for the individual from any of it. There is no conversation either, just chatter. It is an inhuman world, precisely *because* it has no place for the "egocentric", a term whose negative connotations are employed by such people precisely in order to do away with the underlying concept of the individual person itself. It is an inhuman world precisely *because* it has no place for the "ethnocentric," a term whose negative connotations, again, are employed precisely in order to do away with the underlying concept of tradition, culture, and heritage. Certainly, those terms can bear both a negative and a positive sense. When "egocentrism" goes to extremes, one ends up with a narcissist, a sociopath, a psychopath; but "egocentrism" might also convey simply the concept of "self-awareness," that one is, indeed, a "self." I say this because there are certain "new agey 'philosophies'" that think the self is the root of all problems, and I cannot help but get that impression from the the statements in this article. Notably, other terms like "equitable" and "inclusive" have been left conveniently undefined, and how much blood has been spilled in the last century by similarly utopian ideologies, espousing similar utopian (and onanistic) prose, in the name of "inclusiveness" and "equality"?

No, you can count me out of this latest Borg collective. I do not want to be "holistic" nor "worldcentric", nor "included".

I'd much rather remain egocentric, ethnocentric, and all the other isms that make me human, and just sit and enjoy a pipe of tobacco, and some good old fashioned analogue conversation with friends, than to be an integrated digital cog in a "digitally mediated consensus" of "holistic, equitable, and inclusive world-centrism."

And one final thing, did you notice the subtle thing that was done here, with the reference to "distributed ledger technologies"? Did you notice how subtly humanity itself was transformed into a crypto-currency, and into the collateral for it? Not for nothing does the diagram chosen to illustrate the "Spatial Web" take the shape of a Cube...

... just like *Star Trek's* Borg...

See you on the flip side...

Police Are Kidnapping Healthy Canadians & Forcing Them Into Isolation Camps

[Police Are Kidnapping Healthy Canadians & Forcing Them Into Isolation Camps!! Where's Your Freedom?!](#)

by [Dan Dicks](#), [Press for Truth](#)

February 3, 2021

“Radisson Hotel is owned by the Chinese. The Chinese government owns the facilities that Canadians are being held in isolation camps. Just let that sink in for a second, guys. Maybe you’ll start to understand where this is all heading.”

Video available at [Press for Truth BitChute](#) channel.

Canada is no longer a free country, when you’re innocent and healthy but are forced into isolation camps, that’s tyranny, not freedom. Under the guise of a “pandemic” the Canadian government has introduced insanelly Draconian laws that completely obliterates the rights of every single person living in Canada.

In this video Dan Dicks of Press For Truth covers the Canadian Gestapo and how they’re scooping up innocent and healthy Canadians at their discretion precisely as we’ve WARNED they would.

Social Engineering in the West; the Shutting Down of Human Consciousness

[Social Engineering in the West; the Shutting Down of Human Consciousness](#)

by [Willem Felderhof](#)

December 15, 2016

“The conscious and intelligent manipulation of human behaviors, thoughts and opinions is the primary element in society. Those who hold the knowledge and manipulate these unseen mechanisms in society constitute the invisible

government and are the true rulers of humanity. We are governed, our minds are molded, our tastes are formed, and our ideas are suggested, by men we never heard of".

The above quote was made by Edward Bernays in 1928. He was referring to then already highly effective forms of mind control programs that humanity was subjected to in the manipulated 3 dimensional control matrix as we still know it. Close to a century later and with the help of numerous think tanks and institutes that serve the ruling elites like the Tavistock institute, mind control techniques have been refined to unimaginable levels, where humanity is on the brink of becoming fully robotized and ready to serve in the new world order, without even knowing it. Anyone who claims not being under the influence of social engineering/Mind control or is not aware of it at all, is clearly lost and does not have a clue what is going on in their manipulated minds and therefore they do not understand what is going on around them as well.

Following quote by [überpsychopath Zbigniew Brzezinski](#):

"The technotronic era involves the gradual appearance of a more controlled society. Such a society would be dominated by an elite, unrestrained by traditional values. Soon it will be possible to assert almost continuous surveillance over every citizen and maintain up-to-date complete files containing even the most personal information about the citizen. These files will be subject to instantaneous retrieval by the authorities".

Now bear in mind that this statement was made almost 50 years ago and think about the endless technological possibilities the psychopathic social engineers have access to today. Fact is that most of humanity embraces his/her enslavement and illusionary state of freedom, not only due to ignorance but also because it helps avoiding any responsibility and/or precious time consuming Self-work. We just do not want to know the unpleasant Truth that our minds are owned and controlled

by Satanic dark occultists. The result of lifelong (trauma based) refined mindcontrol programming is a shut down of consciousness on a massive scale. As a result of that we see the rise of an engineered obedient slave with a total lack of any impulses of authenticity and free will, that operates from the vibration of fear.

Eugenics

One of the main game tools of the occult social engineers is Eugenics. Eugenics is an ancient satanic social ideology advocating higher rates of sexual reproduction for people with traits and characteristics desired by its proponents and, reduced rates of reproduction and sterilization for those with undesired traits and characteristics. This satanic practice is a primary religious tenet of the psychopathic rulers, who believe that it is simply "natural order" for the most ruthless of humans whose genes are the fittest to rule over the rest of the human herd. They truly see themselves as the chosen ones, as gods, because they are genetically superior over those they rule over. From that deceased psyche emanates the twisted belief that they can decide who is allowed to live and who must die. And this morbid form of human harvesting happens in plain sight for those who are willing to see the Truth.

Garbage in, garbage out

The occult ruling class discovered long, very long, ago how to influence the breeding process within entire populations for the purpose to make these populations easier to control. The controlling of human breeding is done by manipulation of the human consciousness. In other words; population control through mind control.

They are also creating humans with horrible traits and characteristics through the manipulation of human biology, biochemistry, and consciousness via chemicals in our food/water and air. Exposure to insane levels of unnatural

electro magnetic fields are interfering with, and changing human physiology for the worse. It is literally a form of "down" breeding since the tactics are clearly used to weaken and destroy the targeted population i.s.o. improving them. Of course this is part of the depopulation agenda as well.

A blatant indication of a deeply mind controlled human being, that is in a solid state of denial, is someone who claims that this is all just the result of normal evolution. Where eugenics is one of the pillars of Satanism, ego worship and self preservation is another one. Most people do not want to hear the ugly Truth that we are ruled by occultist with a Satanic mindset. Let alone consider the idea that the hijacked human consciousness is being morphed into a pseudo satanic, false self obsessed clone of its rulers through social engineering. But all you have to do is look around you to get a confirmation of this unpleasant Truth.

The end product of this programming is a self obsessed human being that is totally disconnected from reality, and full time occupied with (false) self serving activities. That product is lost in non relevant behavior and thoughts and is entirely establishment serving and non establishment threatening. The perfect obedient slave. Because this "product" is fully ego identified and self obsessed, it is unaware of its connection to the collective reality; it is operating by a consciousness that is in a shut down modus. On a deeper level this engineered contracted type of consciousness operates from the vibration of fear, self loathing and ignorance. And because of that it will feed (while being unaware of it) the ongoing manifestation of more chaos, control, and suffering in the "external" collectively manifested reality.

The current manifested reality that we as a collective experience, is the aggregate of the consciousness of the individuals. So in order to change the current external reality, large numbers of people have to change their inner reality by (re) gaining the sacred knowledge of human

consciousness and how it operates and manifests in accordance with Natural Law. Understanding the concept of non separation from the external reality, is an indication of knowledge of a True Self that operates from non duality.

War on the True Self

Through the relentless eugenics and trauma based mind control programs we see the clear emerging of a false self/ego identified, socially engineered woman and man that operate from the vibration of fear and that is stripped from "it's" genuine masculine and feminine modalities. The desired by products of this engineered madness are: further destruction of the sacred masculine and feminine dynamics; break down of traditional family bonds and the break down of the sacred emotional, spiritual and sexual bond between man and woman. (if you google sacred bond man and woman you will see mostly pop ups from Hillary Clinton)

The engineered woman is being culturally conditioned to no longer be attracted to any of the qualities of the genuine man. Such genuine qualities include high holistic intelligence, real/natural confidence emanating from healthy self-esteem, being very vocally opinionated, independence, a rebellious attitude towards authority and placing very high values on individual freedom. Such traits are, of course, seen as highly dangerous to the goals of the rulers, who wish to see society produce weak men, since weak emasculated men are very unlikely to resist the State, while the genuine man will rebel against it.

The socially engineered woman wants to be placated, revered and pampered through relentless princess programming at early age where they are programmed to: value only what can be gained for themselves through relationships with men, to seek only a man who can "provide for them". To place obsessive importance on their looks to "lure" a male, to devalue the importance of their own intelligence, to seek money as main

value system and to think that “no man is good enough” for them. This false self identified woman is motivated by the psychological desire for attachment and security. “Love” is seen primarily as a form of co-dependent permanence and attachment and a search for an illusionary form of security, rather than a deep autonomic healthy familial bond with another human being. Hence the irrelevant first and foremost question when a woman and a man meet for the first time: “What do you do for a living”?

This search for security in a man with money and/or good looks or the desire to be taken care of by someone else is an integral part of the ego-gratification. And self preservation is the primary pillar of a Satanic mindset. An inconvenient Truth that most will refuse to understand and/or admit. Most people prefer to attribute this to Darwinian logics when in fact this behavior is deeply ingrained social conditioning. The early princess programming, the trauma based outcome based education system, and the (neo) feminist agenda's have engineered the conditioned woman to love the State and her false self.

The State continually, through mass mind control, positions itself to be psychologically accepted as the provider, protector and husband. Especially the communist, marxist outcome based education slaughterhouse is a primary source of the engineered co dependence towards the State by both genders, partly through the insane prolonged compulsory separation from the parents.

Any parent who still continues to offer their children to these mind destruction factories without any significant resistance, is willfully facilitating the destruction of the authentic true Self of his/her child. The high sensitive, creative, and intelligent potential rebels against the increasing forms of tyranny are having severe problems to adapt to this profound sick system. This highly precious generation for humanity is being “neutralized” by labeling

their entirely normal response to the State run compulsory torture system with ADHD/ADD or other ridiculous "diagnoses". Engineered computer/gaming addiction and disgusting medication regimes will zombify them further. Ignorant parents and pseudo psychologists, acting as agents for the system, are enforcing the identification of the child with their so-called problem, thereby pushing the child further into an engineered structural state of psychological stress and self loathing.

Marriage with the State

Fake, codependent, and false-self "love" programming through Hollywood love story movies, television series, books, music etc, drive the conditioned engineered man and woman into an obsessive search for the perfect relation and/or marriage. Marriage brings an even deeper personal relationship into union with the state- which has been traditionally used and steered to the benefit of the female, in the case of divorce. Up to 45 % of marriage end in divorce and divorce courts rule drastically in favor of women, feeding the division between man and woman and feeding the female's craving towards the State. Money and the maintenance of lifestyle is valued above emotions, feelings and moral issues in relationships. This engineered system is structured in such a way that it breaks down both genders, the family tradition, and has a highly destructive impact on future generations as well.

Breeding out the rebel

The war on the genuine authentic men takes form of the emasculation of the human male, a process which breeds out the Sacred masculine dynamic (the willingness to stand up against any form of tyranny or bullies). The long-term agenda is to create a feminized man that will not ever challenge the state and to simultaneously condition women to view the state as a powerful husband/father figure. Rebellion against the state, a reverence for true freedom, and placing high value on personal responsibility and individual rights, are traits that are bred out of humanity through refined eugenics because such traits

are undesirable to the ruling class. Socially engineered traits are being bred into the new "man" and include: a fear and disinterest of going against the norm, docility, submissiveness and obedience to authority. Mind control based eugenics are designed to breed compliant slaves and to eliminate raw rebels, independent thinkers, and spiritually aware human beings.

One of the most fundamental aspects of these programs is to influence the vast majority of women to be attracted only to fake men who are the most fitting to perpetuate the system of human slavery in a one world government system. This engineered self obsessed man displays pseudo and feminized masculine characteristics. Although presented as a real man he will most likely be dead-on-day-one in a real survival scenario as he is completely unaware of world issues and of his own enslavement.

Idolized self obsessed sport heroes and "musicians" serve as effective programming tools for pseudo rebellion. If you google the word rebel today, you will see that nothing will pop up that comes near a real rebel. True rebellion against the state and healthy patriotism are being bred out human consciousness and the new socially engineered generations have no intention to search for it anymore, as it is an unknown concept for the disconnected and self centered obedient new world order slaves.

The rise of the engineered millennial human being.

Millennial human beings are the children of the post baby boomer generation and were largely "raised" by the state-run trauma based mind control education factories, television/computer, and pop culture. They have been conditioned by these systems to behave in ways that are complacent, compliant, unquestioning, unthinking, and narcissistic.

They absorb huge amounts of television programming and/or

computer gaming, consume poisonous genetically modified foods, are obsessed with escapist pursuits, conduct only vapid, inane conversations, and express an extreme lack of concern or interest in real world issues.

If they are confronted with someone who questions authority or addresses immoral behavior they will react either with apathy, aggressively, or will collectively ridicule the person that is expressing the normal moral behavior. This form of engineered policing of each other emanates from the fear of being expelled from the group. This fear based mind controlled form of self policing is the result of deep self loathing. The fear of being different is partly engineered through the compulsory education system that enforces traumatic abandonment issues by creating further separation from the parents, and through television programming and other media tools.

The millennial human beings are the absolute dream of the social engineers.

Androgenization

Another tactic in the gender war is the deliberate androgenization of society, which slowly homogenizes and gradually erodes the distinctiveness of both genders. When genders and gender roles become skewed and blended, strong men and women sharing cohesive familial bonds become an endangered species.

As a result of the breakdown of the sacred bond between man and woman, society becomes further weakened at a fundamental level and thus easier to control. Besides that it serves the depopulation agenda as well, just like the other tactics in the gender war. And again, anyone who attributes these engineered phenomena as natural and a result of normal evolution is clearly operating from an "owned" mind. People call me a homophobic when speaking out about androgenization being hyped in the media as a tool for social engineering. This is exactly the goal of the social engineers; we should

all accept these abnormal tendencies in society as normal; there is really no such thing as objective standards for right and wrong. Police each other with moral relativism; there is no Universal wrong or right.

Real external change comes ONLY from real change within

While the epitome of narcissistic paranoid psychopathy, embodied by Donald Trump, has been given the power over the controls of the most deadly and advanced nuclear war machinery the world has ever seen, the consensus in the majority of humanity is that we have to wait and see where it will go. Even under the so-called awake people are (or were) large numbers of people who consider the possibility that this time there might be a real chance for external "change". That apathetic and co-dependent reaction not only reflects a total lack of knowledge of the structures and dynamics of power in society, and the distractive role of the pathetic political arena's in general. It is also a disturbing indicator of the lack of rulership over, and knowledge of our individual consciousness.

Would it really be possible that the presidency of Trump was unexpected, totally unforeseen and unaccounted for by the genius occultist ruling class who OWN the whole stage for centuries, and are masters of deception for centuries? Most probably not, maybe for a tiny part, I would not bet on it anyway. But the most, if not the only, relevant question here is WHY all this is happening. As stated before we have to understand by experience that this system of chaos, control, fear, and human suffering is manifesting as a direct result of the dynamics of our own individual consciousness.

Real transformation requires TOTAL commitment

The current collectively shared reality, and the ever increasing levels of control that come with it, is the manifest of the aggregate of our individual consciousness. Individual consciousness today is mostly operated by a false

ego identified self, driven by fear and ignorance. Engineered fear and ignorance by the occult rulers who have kept the knowledge of human consciousness hidden (Occult) to humanity in order to be able to manipulate and control it. In this unique time of information we have a chance to regain that knowledge and create another external reality which is emanating from a consciousness that is operated by the True Self, driven by Love and true knowledge in accordance with Natural law.

Only with total commitment, deep Self work, time and energy, humanity can turn the tide. We need to radically change the way we think, the way we feel, and above all, the way we behave. True external change comes from within, not the other way around. Instead of focussing on, and trying to change the external, we should change our reality within.

That process requires the willingness for a deep psychological and physical surgery without anaesthesia that includes a slow but certain death.

Death of the engineered false self that operates from fear, and a breakdown of all attachments to the belief systems that caused the identification with it. Only then we can facilitate the rebirth of the genuine True Self that will be able to manifest a different external reality. An emerging external reality that represents anarchy because it is manifested from the vibration of Love and not from fear. Anarchy is the expression of True Freedom. The real fear for anarchy is the fear for True Freedom; the unknown. The social engineers worst nightmare.

Important note: this article is written in generalized terms for convenience, but I am referring to the majority of a gender group or certain engineered group tendencies in society in general. Of course we see also authentic human beings operating from their True Self, but they are very rare in their presence.

To understand more about the war on human consciousness, eugenics, mind control and Natural Law, watch these seminars by Mark Passio. In the first controversial presentation, Mark Passio blows wide open the Dark Occult agenda of Neo-Feminism, which is being used to sow the seeds of discord between men and women in order to weaken the human species and ensure that future generations of humanity lack the traits necessary to resist tyranny. The destruction of gender roles and the familial dynamic are explored as major themes throughout Mark's hard-hitting lecture.:

On October 19th, 2013 Mark Passio presented his seminar "Natural Law: The REAL Law of Attraction" at the Yale Omni, organized by Arthur Capozzi & Christopher Capozzi, and produced for distribution by Tragedy and Hope dot com. This is the morning session, which will be followed in this playlist by the remaining 2 segments. Take the time to watch, study, and enjoy it.

A New Ending for Orwell's 1984

Source: [No More Fake News](#)

by Jon Rappoport

October 14, 2016

I write a new ending for Orwell's 1984

O'Brien's dream

"Money can buy you immortality, according to the Russian internet multi-millionaire who is ploughing a fortune into a project to create a human that never dies. Web entrepreneur Dmitry Itskov is behind the '2045 Initiative', an ambitious experiment to bring about immortality within the next 30 years by creating a robot capable of storing human personalities. The group of neuroscientists, robot builders and consciousness researchers say they can create an android that is capable of uploading someone's personality. Mr Itskov, who has made a reported £1bn from his Moscow-based news publishing company, is the project's financial backer. 'Different scientists call it uploading or they call it mind transfer. I prefer to call it personality transfer' – Dmitry Itskov." (The Telegraph, 3/13/16)

Winston Smith, the hero of Orwell's 1984, has just been arrested for crimes against the State. Sitting in his cell, he watches as a familiar figure steps through the door. It's O'Brien, the man he thought was his friend. But O'Brien is an undercover agent of the Party, and the Party rules all.

O'Brien: Don't worry, Smith, I'm not here to wring a

confession out of you or torture you. We've updated our methods. We have new technology. We can preserve the life and essence of every human now. This is our mission: to save, to improve, to transform.

Smith: What are you going to do?

O'Brien: We're going to take your essence, your personality, which is your brain, and we're going to transplant it into a new body, an artificial construct. Some people would call that a robot, but it's really an advanced bio-machine. It's programmed to operate correctly in the new society.

Smith: Operate correctly?

O'Brien: In other words, those choices your brain might make which are counter to the purposes of the Party...those choices will be nullified by the bio-machine.

Smith: So I'll live on, but without freedom.

O'Brien: Exactly. You'll be you, but you'll be integrated with the collective. That's our sales pitch.

Smith: Suppose my brain isn't my essence or my personality?

O'Brien: Oh, we know you're more than your brain. We know every human has dimensions of consciousness and power the brain can't touch. We don't publicize that fact. It's a State secret. But we SAY your brain is you. We promote the idea.

Smith: But you can control my brain.

O'Brien: Correct. Your brain is a processing center, so to speak, and we can monitor what it does and stop it from acting in ways we consider harmful.

Smith: What makes you think I'll be there at all after you take out my brain and put it in a bio-machine?

O'Brien: You won't be there. We know you won't be. But we say

you will. It's another aspect of our State propaganda. It eases people's fears. We assure them they'll live on. We tell them they and their brains are the same thing, if you follow my meaning.

Smith: And they buy that idea?

O'Brien: Of course. They're not very thoughtful. If we said the individual and his consciousness were more than the brain, people would be confused. So we stick to the basics.

Smith: There are people who actually believe they will live on because you take their brains out of their bodies and install them in a bio-machine?

O'Brien: They do believe it, trust me. Getting them to believe it took many years and a great deal of scientific gibberish. Anyway, you'll lie down on a table, we'll anesthetize you, remove your brain, transfer it to a bio-machine that looks like you, and then activate the brain. A new version of Winston Smith will stand up and go about his life. Except now, instead of being a rebel, he'll be a member of the Party, loyal and trustworthy. And you? You'll be gone. Who knows where?

Smith: Suppose you transferred my brain but didn't put a monitor and limiter on it? What would happen then?

O'Brien: The bio-machine would more or less act like you—the rebel. It wouldn't be you, of course, but it would be a reasonable facsimile. An imitation, you might say. With far less imagination.

Smith: I'm me.

O'Brien: We know that. We know you're beyond your brain, which is to say, you're beyond any form of matter. But we don't care. We only care about creating an imitation of you.

Smith: And that imitation would walk around and interact with

other imitations you've created.

O'Brien: This is a long-range project. Eventually, we'll transfer the brains of everyone—excluding high Party officials—into bio-machines.

Smith: And you'll call this immortality.

O'Brien: That's right. We'll call it immortality, freedom, health, well-being, happiness. We'll call it whatever we want to.

Smith: And the scientists who are working on this project?

O'Brien: They're high-IQ idiots. They believe the individual is nothing more than a series of patterns. Patterns of thought and action. They believe freedom is a fiction. They believe consciousness independent of the brain is a fiction. Again, those of us in the Party who are in positions of influence—we know the truth. But we keep it to ourselves.

Smith: Why are you admitting this to me?

O'Brien: Because I like you. I consider you a friend. I could have ended up like you. But I saw which way the wind was blowing, and I joined the Party.

Smith: You're a murderer.

O'Brien: Would you expect anything less?

Smith: I guess not.

O'Brien: Those of us in the core of the Party are the greatest secret society the world has ever known. Why? Because we understand that The Individual is not made out of matter at all—and yet we operate as though he is nothing more than a small amount of matter inside his skull. Do you see?

Smith: You make robots.

O'Brien: All right, if you want to put it that way.

Smith: I'll never learn to love Big Brother and the State.

O'Brien: That's what our algorithms tell us.

Smith: Whatever you do to me on the operating table, whatever you do to my brain, I'll still exist afterwards, but I won't be anywhere near my brain. I'll be gone.

O'Brien: That is our assumption as well. But wherever you go, whatever you do, it won't affect us. We'll carry on. Our empire is the physical world.

Smith: I see a massive crack-up coming in your world. Robots going crazy. Machines fighting other machines. They'll be unconscious, but they'll leap outside your control.

O'Brien: What makes you say that?

Smith: Intuition. The robots will come after you. You won't be able to stop them. You'll be running Earth like a giant mental ward. Those operations always go haywire. They'll destroy you...Then we'll come back. We'll pick up the pieces.

O'Brien: Maybe so. I won't be here to see it.

Smith: You may not be here, but wherever you are, I have a feeling you'll see it. And we'll recognize you.

O'Brien: It's all academic.

Smith: No. When we recognize you, you'll experience the most real thing that's ever happened to you.

O'Brien: So the war is never over?

Smith: It's over when we win.

O'Brien woke up in a sweat. He was lying in the dark. He got up from his cot and searched for a light switch. He couldn't

find one. He felt the walls of the room. They were blocks of stone. High above his head, he saw a skylight. The glow beyond it was faint.

Where was he? What was the date?

“This is ridiculous,” he said. “What is this place? I’m just a neuroscientist working for the National Institutes of Health. I’m not O’Brien. This isn’t 1984. I want to achieve immortality for human beings. I just want to transfer their brains into artificial bodies, for their own good. What’s wrong with that? I’m a humanitarian. The government sponsors my research. I’m a doctor. I help people.”

Chemtrails, Terraforming, Transhumanism and You

[Chemtrails, Terraforming, Transhumanism and You](#)

by [Zen Gardner](#)

April 22, 2016

What most people are not allowing to coalesce in their consciousness is the grand scheme behind the so-called chemtrail program, also known on a more macro level as geoengineering.

Geoengineering is an ongoing operation to steer and fabricate not only the world’s weather, but its food growing cycles, disasters, and the deliberate manipulation of economic and geopolitical trends, such as the weakening of governments and

the placement of humanity to more controllable centers. Like any and all of these massive manipulative programs under way against humanity, these attack vectors have multi-fold purposes.

We know the slow and steady depopulation of especially the northern hemisphere is under way via a variety of programs, from chemical and genetic sterilization to growing food scarcity and outright sickness inducement. Instead of government or international agencies working to actually help and heal humanity, their agenda is clearly documented as being one of human impairment and reduction in numbers, easily accessible information on this being available in UN documents, tank papers and the stated goals of eugenicists for decades.

Even more nefarious is the introduction of nanotechnology into a wide range of these assaults. While transhumanism has been successfully popularized and embedded into mainstream culture and the robotization of our workforce made fashionable, little do people realize that amongst the chemtrail particulates have been found intelligent nanoparticles designed to make the human body and any living organism a micro transceiver of information. (See CarnicomInstitute.com)

Ray Kurzweil, a major proponent of artificial intelligence and the mis-named singularity and human so-called transcendence to machine status and supposed infinite longevity, is even more Orwellianly a top exec at the massive intelligence OP called GoogleInc. I say mis-named singularity as this term originally indicated a transition in consciousness and society when information met an apex in acceleration. They've since bastardized this notion to say it would indicate the takeover by artificial intelligence.

How convenient for those seeking maniacal control of absolutely everything. All of this speaks to the psychopathic depth of these control programs.

In addition, the earth, our beloved Gaia, is being inundated with toxic influences meant to break any and every natural cycle there is. From changing the Schumann resonance of our planet to our genetic make up, weather, radiation levels and even magnetosphere, they will stop at nothing in their efforts to literally terraform our planet. As insane as that sounds, since it appears we all need to live here including these psychopathic engineers, this speaks to something much deeper and spiritually nefarious.

For whom is this environment being changed? Is a grand experiment under way to create a survivable race of humanoids who can adapt to a toxic environment for the purpose of easy dominion by a very few? And from whence are these creatures who tolerate such an altered state, or think they can survive unscathed by their wicked, unnatural machinations?

These are questions we should be asking when investigating these programs. If we cannot connect the dots, as creepy a picture as this information may paint, we won't be able to confront, never mind expose, the depths of manipulation and control to which we're being subjected.

Identifying the obvious, such as the chemical invasion of our skies, is just the beginning. They are trying to keep us at bay by drawing the line on our collective awareness as they do at every level of projected information regarding their ongoing programs.

Let's take this investigation and exposure to its full extent on every front. There is an overall agenda humanity needs to wake up to before we can begin to counter it.

But always remember, our awakening of eternal consciousness is the ultimate weapon, and solution. Get there first, and the rest will be evident.

Much love,

Zen Gardner

[Zen Gardner](#) is an impactful and controversial author and speaker with a piercing philosophical viewpoint. His writings have been circulated to millions and his personal story has caused no small stir amongst the entrenched alternative pundits. His book *You Are the Awakening* has met rave reviews and is available on amazon.com. *You Are the Awakening* examines the dynamics of the awakening to a more conscious awareness of who we are and why we are here – dynamics which are much different from the programmed approach of this world we were born into.
