The extremely anomalous surface cool-down in Texas and other parts of the world are not just random acts of Nature. Global climate engineering operations are not just a proposal, they have been [an ongoing reality](#) for over 70 years. Erratic and unprecedented weather is radically increasing everywhere. Though there are countless forms of human activity affecting the equation, the global climate engineering programs are by far the single greatest and most destructive factor. The geoengineers are [manufacturing winter](#) weather scenarios on a scale that can scarcely be comprehended, such operations are nothing short of winter weather warfare. Ecosystems are being decimated by the climate engineering onslaught. No habitat, no humans. What will it take to bring the geoengineering issue to light, once and for all?

The photos below were just captured near Kerrville, Texas. The images clearly reveal the results and consequences of chemical ice nucleation operations. [Patented processes](#) of [chemical ice nucleation](#) for weather modification are a primary component of the climate engineering programs.
