Climate engineering researcher Dane Wigington contends the coming food shortage that President Biden recently mentioned is not because of the Ukraine/Russia conflict. Wigington explains, “The bottom line is we have crops collapsing all over the globe. Although the causes are many . . . climate engineering must be considered a core causal factor at this point. The assault against food producing regions has been relentless. . . . We can only consider it an assault against food production at this time.”

Wigington says time is short and predicts, “Based on the current rate of UV (ultraviolet) increase, it appears we may have a functional Ozone layer collapse in as little as 18 months. Nothing grows then. The heat in California is relentless, as well, because climate engineers are keeping a high pressure heat dome over the western U.S. For photosynthesis, as we approach 104 degrees, photosynthesis

tapers off, and at 104 degrees, it stops completely. To blame the food shortages coming on the Russia/Ukraine scenario is to simply scapegoat it. . . . Climate engineering is the single biggest factor in the equation for the destruction of food production.”

It's not just food production that is going to take a hit, but coastal communities and cities could be facing massively rising sea levels in a relatively short amount of time. Wigington says, “As we lose the Cryosphere, there is enough ice in Antarctica to raise sea levels 197 feet. In Greenland, there is enough ice to raise it another 21 to 24 feet. As the ice slides off these land masses, the land begins to rise up out of the ocean. That is called ‘glacial rebound,’ and that can raise the seal levels even further. . . . When the power structure cannot hide the severity of what is unfolding, you just can't shut off this kind of thermal inertia. When they just can't hide it and people panic, that's when the law of the jungle will truly prevail. We are perilously close to that point.”

The planet is in total meltdown right now. It is melting down at a rate of seven Hiroshima bombs per second. It's not just crops collapsing, but oceans are collapsing. We have ocean ecosystems all over the globe collapsing. . . . If you watch the mainstream media, it is a total distraction, and people are totally missing the point. Who cares about the price of gas if you have nothing to eat, and we are almost there. . . . We simply have to stop geoengineering very soon or we are not going to have anything to salvage. . . . If everyone can work together to reach a critical mass awareness, we can wake up our military brothers and sisters and those participating with private defense contractors. We have a chance of stopping these programs from the inside out. Then, we can allow the planet to respond on its own. We need to convey that blaming Russia on the coming food collapse is not reality. . . . If we can pull back the curtain . . . we may have a chance to

salvage at least part of what remains of the planet's life support system."

Join Greg Hunter of USAWatchdog.com as he goes One-on-One with climate researcher Dane Wigington, founder of GeoEngineeringWatch.org for 3.29.22. (There is much more in the 41 min. interview.)

After the Interview:

There is vast and totally free information on GeoEngineeringWatch.org.
