The global pandemic, the arrested Harvard scientist, nanotechnology and climate engineering, how are they related? Along with proliferating virus outbreaks, climate catastrophes continue to worsen rapidly around the world. Will populations finally begin to wonder whether such events are just acts of nature? Or something else all together? The unprecedented wildfires in Australia continue unabated, will there be anything left to burn in the land down under by the end of their Australia's summer season? Devastating and deadly floods are wreaking havoc in other parts of the world. How should the term "biosphere collapse" be defined? The latest installment of Global Alert News is below.
