

Corona, 5G, and EM Disease Templates

J.K. spotted this one, and it definitely qualifies as a whopper-doozie if even a shred of it is true:

<https://humansarefree.com/wp-content/uploads/2020/02/coronavirus-5G-400x220.jpg>

Before we get to today's high octane speculation, let's look at a couple of paragraphs from this article:

The coronavirus 5G connection doesn't mean the bioweapons connection is false (it's not a case of either-or), but rather broadens the scope of the entire event. [Wuhan was one of the test cities chosen for China 5G rollout](#); 5G went live there on October 31st, 2019, almost exactly 2 months before the coronavirus outbreak began.

...

It is phased array weaponry being sold and disguised as primarily a communications system when the frequency bands it uses (24GHz – 100+GHz including MMW [millimeter waves]) are the very same ones used in Active Denial Systems, i.e. crowd control.

Even mainstream Wikipedia describes Active Denial Systems as directed energy weaponry; it disperses crowds by firing energy at them, causing immediate and intense pain, including a sensation of the skin burning.

And there's also this:

Meanwhile, many scientific documents on the health effects of 5G have verified that it causes flu-like symptoms. This article reveals the various connections behind the coronavirus phenomenon, including how 5G can exacerbate or cause the kind of illness you are attributing to the new virus.

When reading this article, I could not help but think of those strange cases from the past few years of the sudden deaths of whole flights of birds, from geese falling dead from the skies in Idaho, to birds dying in the Netherlands, or, like Idaho, falling dead from the skies in Tennessee. We were told in most of those cases at the time, that these sudden deaths were “explained” by the onset of some sort of “sudden death flu”.

(See

<https://gizadeathstar.com/2015/07/you-tell-us-birds-fall-from-the-sky-in-idaho-stone-cold-dead/> and see <https://gizadeathstar.com/2018/11/5g-experiment-in-the-netherlands-is-a-resounding-failure/>)

At the time, I was not buying the “sudden onset flu death” explanation. I preferred, then, to see these phenomena as perhaps the test of some sort of very dangerous and exotic energy technology, using interferometry (and hence, phased antennae arrays), to cause a kind of biological EMP, shutting down the bio-electrical systems of organisms... like birds in flight. Such “tests”, I reasoned, could be conducted in a region of the sky, and at altitudes, not visited by human flight, but by birds. Any flight of birds flying into, or caught within such a region when it was “turned on,” would fall, instantly dead. Such a field might – I reasoned – cause cellular stress that would resemble flu or flu-like symptoms.

But the suggestion here that 5G both uses phased antennae arrays (and hence, interferometry), and that it was rolled out

near Wuhan before the outbreak, suggests to me that there is something here that is perhaps more than coincidental. The use of such a technology, in conjunction with the release of an engineered virus, might accelerate the effects(or similarly, in other configurations, damp them).

However, I'm reminded of Lt. Col. Tom Bearden's book [*Gravitobiology*](#), wherein he reviews some of the electro-magnetic-biological research conducted in the Soviet Union during the Cold War. Russian biophysicists allegedly discovered that particular diseases will have their own electromagnetic "templates", and that such diseases could be induced in healthy tissue by literally "bathing" it in a field of electromagnetic standing waves that would reproduce that "template of disease", and that template in its turn would induce the specific disease in the healthy tissue. Bearden – like the biologist Dr. Rupert Sheldrake – went on to speculate that every specific species has its own electro-magnetic template that guides its development as an organism. Think of it as a kind of "electro-magnetic epigenetics" or "electro-magnetic morphogenetic field", to borrow Dr. Sheldrake's terminology.

That brings us back to the article, and to today's high octane speculation: could it be that we're looking not only at viral outbreak, but one aided and abetted by such an electro-magnetic technology? If we wanted to walk all the way to the end of the twig of speculation and off of it altogether, might we even be looking at a virus that was itself genetically engineered in part by the application of some sort of advanced electro-epigenetics and that can only flourish inside it? Arguing against this notion, there are cases of people contracting the virus in environments where there is little to no 5G rollout. But it is interesting to note that in those cases, the numbers are far lower than they are in China. The standard explanation for the high count in China is that Chinese people tend to have more of the receptors in cells for

the virus to bond to, than other populations.

All that's true enough – always considering that we're being told the truth, which we do here for the sake of argument. But after reading this article, I get the queasy intuition that the story might be more complicated than it first appears, and in that respect, let's recall the recent arrest of Dr. Charles Lieber of Harvard, and his strange connections both to Wuhan, and to bio-mechanical and bio-physics areas of research...

...See you on the flip side...
