FDA experts have unexpectedly voted against approving Covid-19 vaccination boosters for anyone over the age of 16 in the USA, citing a lack of long term data and stating that the risks do not outweigh any benefits because the Covid-19 vaccines are killing at least 2 people for every 1 life saved.

In a live broadcast conducted on the 17th September the Food and Drug Administration vaccine advisory committee met to debate and vote on Pfizer and BioNTech’s application to offer booster shots to the general public. The meeting lasted over 8 hours and contained some shocking revelations.

Dr Joseph Fraiman, an emergency medicine physician in New Orleans, spoke for several minutes during the meeting and revealed that no clinical evidence exists to disprove claims that the Covid-19 vaccines are harming more people than they save.

“We need your help on the front lines, to stop vaccine

hesitancy. Demand the booster trials are large enough to find a reduction in hospitalisations.

“Without this data we the medical establishment cannot confidently call out anti-Covid-vaccine activists who publicly claim the vaccines harm more than they save especially in the young and healthy.

“The fact we do not have the clinical evidence to say these activists are wrong should terrify us all”.

Dr Joseph Fraiman was then followed by Steve Kirsch, Executive Director of the Covid-19 Early Treatment Fund, who revealed that the Covid-19 vaccines are killing more people than they are saving.

“I’m going to focus my remarks today on the elephant in the room that nobody likes to talk about, that the vaccines kill more than they save.

“We were led to believe that the vaccines were perfectly safe but this is simply not true, for example there are four times as many heart attacks in the treatment group in the Pfizer 6 month file report, that wasn’t just bad luck. VAERS shows heart attacks happen 71 times more often following these vaccines compared to any other vaccine,”

Steve Kirsch then continued his presentation by showing a slide titled 'Excess Death: Life ratio is UNACCEPTABLE'. The slide shows how many excess deaths were required following vaccination to save one life due to Covid-19.

The screenshot shows a presentation slide with a dark background. On the left, there is a smaller inset window showing the FDA logo and text: "FOOD AND DRUG ADMINISTRATION (FDA) Center for Biologics Evaluation and Research (CBER) 167th Meeting of the Vaccines and Related Biological Products Advisory Committee". The main slide has the title "Excess Death: Life ratio is UNACCEPTABLE" in white and red text. Below the title is a table with three columns: "Study source", "Excess deaths required to save COVID life", and "Lives saved". The table contains three rows of data. At the bottom of the slide, there is a note: "*Not statistically significant" and a bold statement: "People killed > People saved".

Study source	Excess deaths required to save COVID life	Lives saved
Pfizer 6 month*	5	1
VAERS	2	1
Nursing home (booster)*	6	1

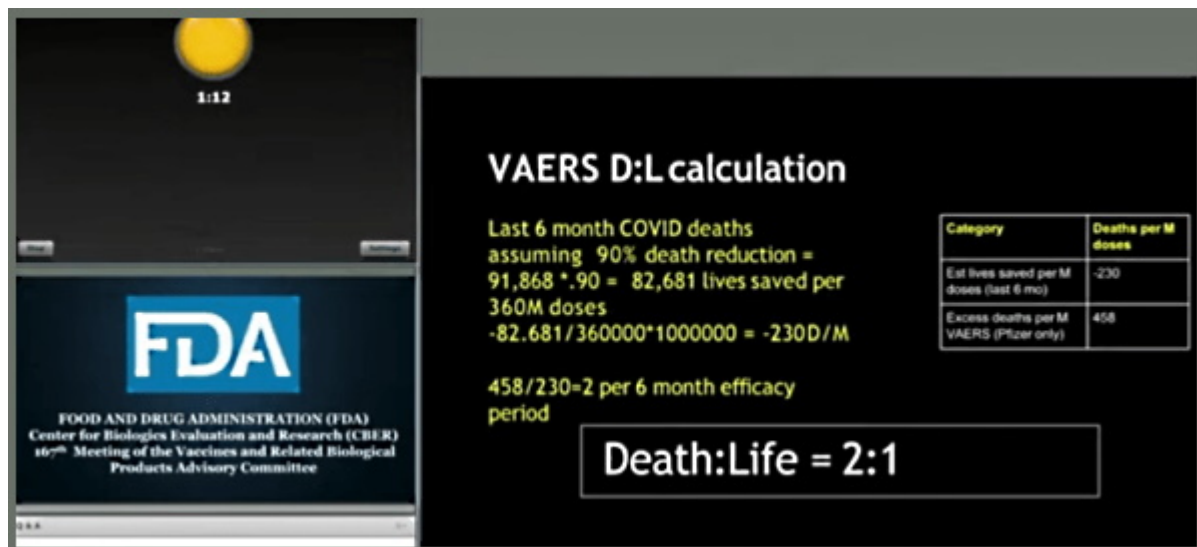

*Not statistically significant

People killed > People saved

"Only the VAERS (*Vaccine Adverse Event Reporting System*) are statistically significant, but the other numbers are troubling." said Steve Kirsch.

"Even if the vaccines have 100% protection, it still means **we kill 2 people to save 1 life.**

"Four experts did analysis using completely different non US data sources and all of them came up with approximately the same number of excess vaccine related deaths, about **411 deaths per million doses.** That translates into **115,000 people have died (due to the Covid-19 vaccines).**"

The Executive Director of the Covid-19 Early Treatment Fund then pointed out some serious concerns over data coming out of Israel.

“The real numbers confirm that we kill more than we save. And I would love to look at the Israel ministry of health data on the 90+ year olds where we went from a 94.4% vaccinated group to 82.9% vaccinated in the last 4 months. I

“in the most optimistic it means that 50% of the vaccinated people died and 0% of unvaccinated people died. Unless you can explain that to the public you cannot approve the boosters.”

Peter Marks, FDA’s top vaccine regulator, then asked committee members to examine “the totality of the evidence in order to make your recommendation for us,”.

Following the evidence they responded with a resounding no voting 16 – 2 against advising the agency to roll-out booster shots to anyone over the age of 16.

The full 8 hour footage is available to view [here](#), but you can watch all of the above comments in the following video –
