STORY AT-A-GLANCE

- In January 2020, Dr. Julie Gerberding, former director of the U.S. Centers for Disease Control and Prevention, who after leaving the CDC became president of Merck's vaccine division, sold half her Merck stock options for \$9.11 million
- Gerberding also cashed out in 2016, when she sold \$5.1 million in Merck stocks, and 2015, when she made \$2.3 million. In total, Gerberding has made \$16,592,144 from her company stock options
- Gerberding's former high-level ties to the CDC likely has had enormous influence over Merck's financial growth, considering Merck makes a majority of the pediatric and adults vaccines recommended by the CDC
- Red flags have recently been raised about Merck's HPV vaccine Gardasil, a vaccine Gerberding promoted in a 2004 report to Congress before it was fast tracked to licensure in 2006. The U.K. recently reported a 54% rise in cervical cancer among 24- to 29-year-olds, the first generation to receive the HPV vaccine
- A January 2020 report in the Journal of the Royal

Society of Medicine warns HPV vaccine trials have not been designed to detect whether the vaccine actually prevents cervical cancer. Trials have shown, however, that Gardasil raises the risk of cervical cancer by 44.6% among women with a current or previous HPV infection

As detailed in The Highwire video above, in January 2020, Dr. Julie Gerberding – director of the U.S. Centers for Disease Control and Prevention from 2002 until 2009, who after leaving the CDC became president of Merck’s vaccine division in January 2010¹ – sold half her Merck stock options for \$9.11 million.

Gerberding also cashed in on her company stock options in 2016, when she sold \$5.1 million-worth of Merck stocks, and 2015, when she made \$2.3 million. In total, Gerberding has made \$16,592,144 from selling off her Merck stocks – all of which, by the way, is over and beyond her regular paycheck – and she still owns Merck stocks worth \$9 million.

And we’re supposed to believe she has been impartial about vaccine safety and has been all along? As noted by Del Bigtree in his Highwire report:

“Do you trust the information that come from your government agencies, when a year after working [at] that agency, they move into the very company that they exonerated from any wrongdoing and end up making \$20-something-million dollars in stock options, plus a gigantic salary? Sounds like a payoff to me.”

Quid Pro Quo

The payoff Bigtree is talking about refers back to Gerberding's exoneration of the MMR vaccine, which came under fire when Dr. William Thompson, a CDC research scientist, blew the whistle claiming the agency [covered up a vaccine-autism connection in relation to the MMR vaccine.](#)

According to Thompson, scientific fraud was committed for the express purpose of covering up potential safety problems so the agency would be able to maintain that the MMR vaccine had been proven safe to give to all children.

Thompson explained they simply eliminated the incriminating data, thereby vanishing the link, and this cover-up occurred while Gerberding headed up the CDC. The CDC subsequently also [blocked a request for Thompson to testify](#) in an autism lawsuit.

Indeed, you'd have to be really naïve not to see the enormous influence her former high-level ties to the CDC can have, considering Merck makes a majority of the pediatric and adults vaccines recommended by the CDC.

The vaccine industry is booming, and it's become quite clear that profit potential is the driving factor behind it. One of the reasons for this is because vaccine patents do not expire like drugs do, so each vaccine adopted for widespread use has the potential to make enormous, continuous profits for decades to come.

Vaccine makers also enjoy a high degree of immunity against lawsuits – and in the case of pandemic vaccines, absolute immunity – so the financial liability when something goes wrong is exceptionally low, compared to drugs.

HPV Vaccine Responsible for Massive Rise in Cervical Cancer?

An article² by Robert F. Kennedy, chairman of the Children's

Health Defense, wonders whether Gerberding's stock dump might have anything to do with recent red flags being raised about Merck's HPV vaccine Gardasil. He writes:³

"Last month, Cancer Research UK announced^{4,5,6} an alarming 54% rise in cervical cancer among 24-29-year-olds, the first generation to receive the HPV jabs.

The following day, the Journal of the Royal Society of Medicine published⁷ a withering critique of Gardasil's crooked clinical trials, 'It is still uncertain whether human papillomavirus (HPV) vaccination prevents cervical cancer as trials were not designed to detect this outcome.'

As Gerberding knows, those trials⁸ revealed that Gardasil dramatically RAISES (by +44.6%) the risk of cervical cancer among women with a current infection or those previously exposed to HPV.

That may explain the cancer explosions in England and other nations with high inoculation rates in young girls up to age 18; Australia, Spain, Sweden and Norway. A 2019 study⁹ of Alabama girls found the highest cervical cancer rates in the state's most heavily vaccinated counties.

With Merck's efficacy pretensions circling the drain, a coalition of leading plaintiff's lawyers are already in discovery in a suit¹⁰ alleging that Merck fraudulently concealed serious illnesses affecting half, and autoimmune diseases affecting 1 of every 37 girls in Gardasil's clinical trials within 6 months of injection.

As Centers for Disease Control (CDC) Director from 2002-2009,

Gerberding helped Merck paper over these efficacy and safety problems.”

Chances are, Gerberding’s 2004 report to Congress, “Prevention of Genital Human Papillomavirus Infection,”¹¹ played a significant role in getting the controversial HPV vaccine fast tracked to licensure by the FDA in the first place. Needless to say, the approval of this questionable vaccine guaranteed her future employer billions of dollars-worth of profits.

Gerberding has also been a staunch defender of thimerosal, the mercury-based vaccine preservative suspected of being one of vaccine ingredients involved in the development of autism in some children. Thimerosal was removed from childhood vaccines or reduced to trace amounts between 1999 and 2001, with the exception of multidose influenza vaccines.¹²

Since then, there have been a number of additional biological mechanisms proposed by independent researchers investigating why vaccines cause harm.¹³

The use of [aluminum in vaccines](#), for example, may cause neurological damage. In The Highwire video, Gerberding herself was in 2008 forced to admit that children with an underlying [mitochondrial disorder are at increased risk for vaccine damage](#).

Gerberding’s admission came after [Hannah Poling](#), who developed autism after her 18-month well-baby visit when she received nine vaccines, was granted compensation by the U.S. Division of Vaccine Injury Compensation for her injuries.

All in all, Gerberding has repeatedly demonstrated that safety is nowhere on her list of priorities or concerns when it comes to vaccines, so it’s easy to see why Merck would want her to head up their vaccine unit.

HPV Maker's Role in Vaccination Policymaking

A 2012 article¹⁴ in the American Journal of Public Health, in which the authors investigated the role Merck played in state HPV immunization policymaking, states that:

“Merck promoted school-entry mandate legislation by serving as an information resource, lobbying legislators, drafting legislation, mobilizing female legislators and physician organizations, conducting consumer marketing campaigns, and filling gaps in access to the vaccine.

Legislators relied heavily on Merck for scientific information. Most stakeholders found lobbying by vaccine manufacturers acceptable in principle, but perceived that Merck had acted too aggressively and nontransparently in this case.

Although policymakers acknowledge the utility of manufacturers' involvement in vaccination policymaking, industry lobbying that is overly aggressive, not fully transparent, or not divorced from financial contributions to lawmakers risks undermining the prospects for legislation to foster uptake of new vaccines.”

Merck Plays Loose With HPV Vaccine Data

In June 2019, I published [Kennedy's presentation of Merck's clinical trial data for Gardasil](#), in which he reveals how the company hid the truth about its side effects. One way in which Merck committed fraud in its Gardasil vaccine safety trials was by using a neurotoxic ingredient in Gardasil as a bioactive placebo. This trick effectively renders its safety testing null and void, as the true extent of harm cannot be ascertained.

Merck's own trial data also reveals Gardasil increases the

overall risk of death by 370%, the risk of autoimmune disease by 2.3% and the risk of a serious medical condition by 50%.

Kennedy also points out that National Cancer Institute data show the mortality rate for [cervical cancer](#) is 1 in 43,478 (2.3 per 100,000), and the median age of cervical cancer death is 58. To eliminate that one death, all 43,478 must pay \$420 – the average cost of the three Gardasil injections.

According to Kennedy, 76 million American children have been mandated by the U.S. Centers for Disease Control and Prevention to receive the vaccine, providing Merck with an annual revenue of \$2.3 billion. When you crunch the numbers, you realize that the cost of using Gardasil to save one life is \$18.3 million.

Meanwhile, compensation paid by the Vaccine Court for the death of a child maxes out at \$250,000. Put another way, \$18.3 million is being spent in an effort to save one life from a disease, while the U.S. Health and Human Services values human life at just a quarter of a million dollars per person when a person dies from using a government recommended vaccine in that effort.

If you're still on the fence when it comes to HPV vaccination, you owe it to yourself to watch Kennedy's presentation and conduct additional research on the vaccine and HPV so that you can appropriately weigh the risks and benefits.

One of the Most Powerful Videos I've Ever Seen

The following video from Barbara Loe Fisher is one of the most powerful videos that I have ever seen. I am hopeful that watching this video will inspire you to take up the cause and join the fight for vaccine freedom and independence.

There is a cultural war and collusion between many industries

and federal regulatory agencies that results in a suppression of the truth about vital important health issues. If this suppression continues we will gradually and progressively erode our private individual rights that our ancestors fought so hard to achieve. Please take a few minutes to watch this video.

Protect Your Right to Informed Consent and Defend Vaccine Exemptions

With all the uncertainty surrounding the safety and efficacy of vaccines, it's critical to protect your right to make independent health choices and exercise voluntary informed consent to vaccination. It is urgent that everyone in America stand up and fight to protect and expand vaccine informed consent protections in state public health and employment laws. The best way to do this is to get personally involved with your state legislators and educate the leaders in your community.

Think Globally, Act Locally

National vaccine policy recommendations are made at the federal level but vaccine laws are made at the state level. It is at the state level where your action to protect your vaccine choice rights can have the greatest impact.

It is critical for EVERYONE to get involved now in standing up for the legal right to make voluntary vaccine choices in America because those choices are being threatened by lobbyists representing drug companies, medical trade associations and public health officials, who are trying to persuade legislators to strip all vaccine exemptions from public health laws.

Signing up for NVIC's free Advocacy Portal at www.NVICAdvocacy.org gives you immediate, easy access to

your own state legislators on your smartphone or computer so you can make your voice heard. You will be kept up to date on the latest state bills threatening your vaccine choice rights and will get practical, useful information to help you become an effective vaccine choice advocate in your own community.

Also, when national vaccine issues come up, you will have the up-to-date information and call-to-action items you need at your fingertips. So, please, as your first step, sign up for the NVIC Advocacy Portal.

Share Your Story With the Media and People You Know

If you or a family member has suffered a serious vaccine reaction, injury or death, please talk about it. If we don't share information and experiences with one another, everybody feels alone and afraid to speak up. Write a letter to the editor if you have a different perspective on a vaccine story that appears in your local newspaper. Make a call in to a radio talk show that is presenting only one side of the vaccine story.

I must be frank with you: You have to be brave because you might be strongly criticized for daring to talk about the

“other side” of the vaccine story. Be prepared for it and have the courage to not back down. Only by sharing our perspective and what we know to be true about vaccination will the public conversation about vaccination open up so people are not afraid to talk about it.

We cannot allow the drug companies and medical trade associations funded by drug companies or public health officials promoting forced use of a growing list of vaccines to dominate the conversation about vaccination.

The vaccine injured cannot be swept under the carpet and treated like nothing more than “statistically acceptable collateral damage” of national one-size-fits-all mandatory vaccination policies that put way too many people at risk for injury and death. We shouldn’t be treating people like guinea pigs instead of human beings.

Internet Resources Where You Can Learn More

I encourage you to visit the website of the nonprofit charity, the National Vaccine Information Center (NVIC), at www.NVIC.org:

- [Vaccine Requirements and Exemptions by State](#) – Vaccine laws vary from one U.S. state to another. By knowing the specific policies where you live, you’ll learn how you can get exemptions and better protect your right to make informed vaccine choices.
- [NVIC Memorial for Vaccine Victims](#) – View descriptions and photos of children and adults who have suffered vaccine reactions, injuries and deaths. If you or your child experiences an adverse vaccine event, please consider posting and sharing your story here.
- [If You Vaccinate, Ask 8 Questions](#) – Learn how to recognize vaccine reaction symptoms and prevent vaccine injuries.
- [Vaccine Freedom Wall](#) – View or post descriptions of

harassment and sanctions by doctors, employers and school and health officials for making independent vaccine choices.

- [Vaccine Failure Wall](#) – View or post descriptions about vaccines that have failed to work and protect the vaccinated from disease.

Connect With Your Doctor or Find a New One Who Will Listen and Care

If your pediatrician or doctor refuses to provide medical care to you or your child unless you agree to get vaccines you don't want, I strongly encourage you to have the courage to find another doctor.

Harassment, intimidation and refusal of medical care are becoming the modus operandi of the medical establishment in an effort to stop the change in attitude of many parents about vaccinations after they become truly educated about health and vaccination. However, there is hope.

At least 15% of young doctors recently polled admit that they're starting to adopt a more individualized approach to vaccinations in direct response to the vaccine safety concerns of parents.

It is good news that there is a growing number of smart young doctors who prefer to work as partners with parents in making personalized vaccine decisions for children, including delaying vaccinations or giving children fewer vaccines on the same day, or continuing to provide medical care for those families who decline use of one or more vaccines.

So, take the time to locate a doctor who treats you with compassion and respect, and who is willing to work with you to do what is right for your child.
