

Doctors, What Are They Good For?

Doctors, What Are They Good For?

by Dr. Sam Bailey

January 25, 2022

People keep asking me where they can find a good doctor.

The real question they need to ask is whether they even need a doctor, because the medical system has become detached from health. But has this happened recently or did medicine go off the rails long ago?

Vaccine Q&A

Q. What are the chances that this particular disease leads to death in the modern era?

A. The mortality rate for pertussis was less than 2 per 100,000, and measles was less than 1 per 100,000 by the time vaccines were in widespread use in the US.

(Humphries, S & Bystriany, R, Dissolving Illusions, 2015)

Vaccine Q&A

Q. Have there been randomised control trials to demonstrate that these products are effective?

A. Most vaccines have not been tested with properly designed RCTs - the few in existence typically have worse overall outcomes for the vaccine group.

(Engelbrecht, Torsten, et al, Virus Mania - 3rd ed, Books on Demand, 2021)

Vaccine Q&A

Q. How long are people followed up in the trials to check for adverse events?

A. Vaccine trial adverse event monitoring - example: Recombivax HB [Hep B] vaccine was monitored for adverse effects for just 5 days.

(Deposition of Stanley A. Plotkin, M.D., Jan 11, 2018, Court for the County of Oakland, MI)

Vaccine Q&A

Q. How much aluminium ends up in the body of a child who is given all the recommended vaccines? And in which organ does this aluminium accumulate?

A. Total aluminium injected into children if they follow the US vaccine schedule: 4,925 µg. Much of it probably accumulates in the brain.

(Handley, JB, How to end the Autism Epidemic, Chelsea Green, 2018)
