

Don't Be on Team Pfizer

[Don't Be on Team Pfizer](#)

by [Jeremy Nell](#), [Jerm Warfare](#)

October 5, 2021

Over the weekend [I chatted to](#) a South African lawyer who is gathering local data surrounding adverse events related to this ridiculous injection.

Yes, lawsuits are coming.

I also chatted to a South African doctor who analysed the blood of “vaccinated” people. (I put quotation marks around “vaccinated” because it’s pretty well established that these shots do not vaccinate as per the definition.)

The lawyer is Riekie Erasmus and the doctor is Zandrè Botha.

The doctor’s findings are almost identical to the findings of doctors in other countries, such as [those of Dr Robert Young](#) and [Dr Philippe Van Welbergen](#) and [Dr Carrie Madej](#).

Something very strange happens to “vaccinated” blood. Take a look.

If you’re on Team Pfizer, then you will undoubtedly dismiss her findings and make up excuses to defend the world’s most lucrative product right now.

Pfizer Made \$11.3 Billion in Revenue From Covid-19 Vaccine in First Half of 2021

I get it.

Indoctrination has that effect, as Professor Of Clinical Psychology, Mattias Desmet, [said a few weeks ago](#).

In a TV interview during the 1980s, former KGB operative Yuri Bezmenov [said](#),

“A person who [is] demoralised is unable to assess true information. The facts tell nothing to him.”

If you've injected yourself with a drug that has [zero long-term safety trials](#), for a mild illness that is a rebranding of a previous mild illness, then you must find information that supports your poor decision.

The image shows a screenshot of a Facebook post from BBC News. The post text reads: "Cold symptoms are very similar to those of Covid - so when should you get tested for Coronavirus?". Below the text is a photo of a woman sneezing into a tissue. The post has 27 comments and 11 shares. To the right of the post is a snippet of a health article titled "Is It Flu or Covid-19? It's Harder to Tell the Symptoms Apart This Year" by Alina Dizik, dated Oct. 4, 2021. The article snippet includes the text: "Runny nose? Fever? Fatigue? Here's what doctors want you to know about how to tell the difference between illnesses as we head into flu season." and a photo of a man sneezing into a tissue with red virus-like particles in the background.

Here's what [every medical guest](#) on my podcast has said in a nutshell:

"Do not get the jab. And if you have, then don't get more."

Because it's [not about health](#).

It's about the [vaccine passport](#) (digital ID) which is a proxy to a centrally controlled tool of increased mass surveillance and denial of freedoms. The World Economic Forum (WEF) is very open about this, [as seen in this video](#).

In fact, the vaccine passport (digital ID) will eventually be required to access the internet. The WEF has already launched this project which is called [The Internet Computer](#).

Here's the thing.

When [powerful people tell you their plans](#), it's probably a good idea to listen.

And to adjust your life accordingly.

For example, if the president says that he wants to stop citizens from legally obtaining a gun for the purpose of self-defence, then it means that you should probably legally obtain a gun for the purpose of self-defence.

A team of investigative journalists known as [Project Veritas](#) is currently releasing a series of undercover interviews regarding the "vaccines". Here's the latest one in which a number of scientists, who work at Pfizer, casually express no confidence in the efficacy of the jabs.

There is no hope for those who blindly defend Pfizer, media lies, and the "vaccines".

But there is hope for those [who are on the fence](#).
