November 17, 2021

Video available at [Planet Lockdown Odysee](#) channel.

Dr Sevillano is one of the key people in a Spanish speaking ad hoc group of researchers called the Fifth Column or La Quinta Columna.

They were the ones that arrange for the examination of vials of various brands of the Covid vaccines at a Spanish University laboratory and released a report on it at the beginning of July 2021 revealing the presence of graphic oxide in all the vials examined.

This material is heavily referenced in endless scientific studies, with a preponderance of applications in the field of bio-sensing, e-medicine and nano-medicine. It is a very hot high tech material now and fits the bill as a possible purpose for this obsessive global vaccination push.
