August 31, 2022

“What kind of world would it look like if we all knew there was no such thing as pathogenic viruses, and that we got sick because of some combination of poisoning our inner water and the field – the electromagnetic field, the ether, so to speak – that we’re all bathed in is giving us information that isn’t good for us?”

~ Dr. Tom Cowan

Discussed:

- Asking foundational questions to find the truth.
- What is the optimal diet for humans. He talks about the foundation question: “What happens when different people eat different diets?”. He referenced research done by [Weston A. Price](#) and that revealed the relationship between groups of people who had perfect teeth and their consumption of animal fats.
- What is the appropriate way to engage in a logical,

rational, scientific discussion?

- Dr. Richard Flemming who claims to have proof that SARS-CoV-2 exists because of an electron microscopy image. Dr. Cowan references the video [The Emperor's New Virus?](#) and the work of Luc Montagnier who said that you cannot prove the existence of a virus based on electron microscopy pictures.

He has gone over this issue in previous videos:
