

Dr. Tom Cowan on “the Snake Venom Stuff”: Covid Caused by a Specific Snake Venom Is Looking Like Pure Fantasy & Remdesivir Is Definitely Not Snake Venom

[Dr. Tom Cowan on “the Snake Venom Stuff”: Covid Caused by a Specific Snake Venom Is Looking Like Pure Fantasy & Remdesivir Is Definitely Not Snake Venom](#)

The clip above is sourced from Tom Cowan’s [Live Webinar From April 15th, 2022](#), found at approximately 2:40 timestamp.

Transcript of the clip:

Right I can imagine there still may be a lot of questions about the snake venom stuff. And we are still looking into that, so I don’t want to say too much.

For those of you who want something to look at right away, I would say I would check out Amanda Vollmer’s – she did a webinar or talk or something. And if somebody has that they could put that in the chat. So that would be a good place to start.

There’s been a lot of other people who’ve weighed in on that. And all I can say for sure that we found out right now is that remdesivir is definitely not snake venom. And that putting any kind of snake venom in the water and have it orally ingested would probably do nothing. In fact it would

do nothing.

And the idea that there's a covid specific disease caused by a specific poisoning with a specific snake venom is looking like pure fantasy.

But hopefully we'll have more information about that. In the meantime, there's some places to check out that really go through this in some detail.

Video by Amandha Vollmer, as mentioned above: [Watch the Snakes and Not the Water!](#)

[Truth Comes to Light editor's note:](#)

For those interested in the difference between being bitten (or injected) with snake venom and drinking venom (note that this is pure venom, not diluted in a vast water supply), we share this video:
