All official sources are blaming the increasingly extreme and deadly wildfire behavior on global warming alone, but is that the full truth? What are “official sources” not telling us about the increasingly destructive wildfires? Illegal [global climate engineering / solar radiation management operations](#) are a primary causal factor that is fueling catastrophic wildfires all over the globe. Climate engineering is completely disrupting the hydrological cycle, triggering increasing dry lightning, [destroying the ozone layer](#), contaminating soils, and covering everything at ground level with an incendiary dust (due to the fallout from atmosphere spraying programs). The new 10 minute video below elaborates on the direct effect geoengineering operations are having on forest fires, their behavior and their frequency.

The satellite animation below was recorded on October 11th, it is important to examine carefully. Anomalous, counter-directional and extreme wind patterns over the core wildfire region have been a major contributing factor in the unfolding firestorm cataclysm in California. All official sources continue to ignore and omit any discussion of the ongoing illegal climate engineering operations.

The climate engineering atrocities are a primary factor in the equation of [exponentially increasing forest fires](#) and fire intensity.

All of us must work together in the effort to fully expose and halt the ongoing climate engineering / weather warfare assault. How? By circulating [credible data](#) from a credible source. [Make your voice heard](#) in this all important battle.
