

# Geopolitics and the Biolabs Theory

## [Geopolitics and the Biolabs Theory](#)

by [Joseph P. Farrell](#), [Giza Death Star](#)

February 28, 2022

The biggest story this last week has naturally been The Ukraine, and you may be wondering why I've filed this story under the GMO scrapbook. It's because the subject has turned to "why" did Mr. Putin pick the present moment to invade? There has already been, for example, some nasty geopolitical fallout, the first for the USSA, and the second for Russia (possibly). As for the USSA side of the equation, former Japanese Prime Minister Shinzo Abe has called on the USSA to "quit being ambiguous" and commit openly and unabashedly to the commitment to defend Taiwan. It's an interesting plea, because Japan has already done so some time ago, but Japan is not (yet) strong enough to undertake that commitment all by itself. But again, I suspect the few competent people left in Swampington can read Abe's implied message very clearly: "either *you* do it or we're going to have to rearm and take matters into our own hands."

On the USSA side of the equation, that country along with Germany has pledged arms shipments to The Ukraine, and the message is once again clear: "*you* do the fighting for us, and hopefully we can escalate the situation and embroil Russia in a stalemate and ongoing conflict." That, anyway, is my best guess of the moment. India, China, Iran and a number of other nations have quietly voiced their support for Russia, but make no mistake, the longer Russia takes, the weaker its position becomes, and the more Mr. Xi likes it. Oh, and by the way, Mr.

Globaloney also appears to be prepping the next narrative via his poodle Mr. Brandonenko, namely, that internet outages, hacked bank accounts and stolen money, and power outages, are going to be due to Russian cyber warfare (see [Biden regime claims Russia is about to unleash cyberattack against power plants, banks and water treatment facilities](#)).

Then of course there's the little-known and remembered ecclesiastical situation, when the Ecumenical Patriarchate of Constantinople – or as I like to call it, the Ecumaniacal Patriarchate, due to its OINO [Orthodox In Name Only] and neo-papal attitudes in the past few decades, not to mention its financial ties to the Vatican and some Clowns In America – granted autocephaly (self-governing status) to an element of the Ukrainian Church, a move roundly denounced by most of the rest of the Orthodox world, making the conflict really an Orthodox versus Orthodox contest of the two largest bodies within Eastern Orthodoxy, a goal that is also condign to the thinking and objectives of Mr. Globaloney.

Amidst all of this there is now a story making the rounds on the internet that Russia is quietly targeting various “hidden” and (not-so) secret biological warfare laboratories that the USSA located to the Ukraine. The rumors include the claim that one of the “projects” being worked on included aerosolized *rabies* that would virtually devastate the entire human population. Whether *that* aspect of the story is true or not I do not know. But the biolabs theory, while wild, does make a certain amount of sense, since a similar story attended the Russian invasion of south Ossetia a few years ago.

Here's a few versions of the biolabs theory (shared by S.D. and D.M.F. with our thanks):

<https://newspunch.com/putin-orders-military-to-destroy-bio-labs-in-ukraine-as-us-scrubs-evidence-of-their-existence/>

<https://ua.usembassy.gov/embassy/kyiv/sections-offices/defense-threat-reduction-office/biological-threat-reduction-program/>

This story now appears to be confirmed, and one of the many reasons for the Russian invasion according to the first article:

*According to US government documents, the US has multiple biolabs in Ukraine. In typical Pentagon fashion, these biolabs are marketed as “defense.”*

*Russia has been warning the US for months to stop operating dangerous biolabs on their doorstep. Mainstream media won't touch the topic now, but they did cover the news in the past.*

*Four months ago, Russia and China [asked the UN](#) for the US to be “checked and limited” in biological capabilities.*

*Russia and China blamed the US for the Covid-19 outbreak and were fearful that the US had more bioweapons to be unleashed on the world.*

*How does this relate to Ukraine?*

*Putin has admitted he is engaged in a “special military operation” to demilitarize Ukraine. Mainstream analysts fail to understand the possible scope of this statement.*

There is another rumor – again as of now unsubstantiated as far as I can tell – that these laboratories were operated in part by EcoHealth Alliance, which is allegedly connected to Anthony Fauci (for more on *this* aspect of the story, see

<https://headlineusa.com/ecohealth-alliance-alleged-cia-front-organization-tied-to-wuhan-lab-leak/>

So the biolabs story is a minefield of rumor, speculation, and like all such stories, there much room for misinformation. But the main story, that the USSA and The Ukraine were operating

biological warfare laboratories, and that the Russian invasion appears to have deliberately conducted operations in the areas containing them, and that the USSA has attempted to scrub the evidence, appears to be true. Let's also remember The Ukraine also was a deliberate target, and was eventually accepting of, GMOs. There are stories out there on the internet right now of scientists trying to combine "vaccines" with GMO foods, and perhaps this type of research was being conducted in these laboratories.

Color me "oh so surprised"... NOT, because I truly believe the political leadership class of the West is by and large insane, corrupt, and evil, and that they're basically capable of anything...

See you on the flip side...
