Transcript:

Was Hurricane Helene's path and behavior just the result of natural processes and climate patterns, or was it manipulated?

The circular blue flashes seen in this video are frequency transmissions from the NEXRAD network of transmitter installations.

All available science evidence makes clear that atmospheric frequency transmissions can and do have a repelling effect on air masses, especially if and when the air masses have been seeded with electrically-conductive nanoparticles.

The brighter the blue flash from a frequency transmission installation, the more pronounced and powerful the repelling effect on any air mass or storm in the vicinity will be.

Where there are no blue flashes, there is no transmission, thus no repelling effect, thus no resistance for a migrating

storm.

Translation: a migrating storm will be hindered from moving toward frequency transmissions and will easily migrate in a direction with no transmissions.

So again I ask, was Hurricane Helene's path and behavior just an act of nature or was it engineered?

You decide.
