Transcript:

*Was Hurricane Helene's path and behavior just the result of natural processes and climate patterns, or was it manipulated?*

*The circular blue flashes seen in this video are frequency transmissions from the NEXRAD network of transmitter installations.*

*All available science evidence makes clear that atmospheric frequency transmissions can and do have a repelling effect on air masses, especially if and when the air masses have been seeded with electrically-conductive nanoparticles.*

*The brighter the blue flash from a frequency transmission installation, the more pronounced and powerful the repelling effect on any air mass or storm in the vicinity will be.*

*Where there are no blue flashes, there is no transmission, thus no repelling effect, thus no resistance for a migrating*

*storm.*

*Translation: a migrating storm will be hindered from moving toward frequency transmissions and will easily migrate in a direction with no transmissions.*

*So again I ask, was Hurricane Helene's path and behavior just an act of nature or was it engineered?*

*You decide.*
