

If Truth Be Told About Cowpox & Smallpox Diseases: Scientific Differences That Caused a Pharmaceutical Fairytale

“I hope that someday the practice of producing cowpox in human beings will spread over the world – when that day comes, there will be no more smallpox. – Edward Jenner

Holy cow!

Edward Jenner did not know **cowpox** and **smallpox** were/are two different organisms or diseases!

And the pharmaceutical industry followed charlatan Edward Jenner into a perpetuity of high profits and criminal scientific misdemeanors for which Big Pharma and vaccine manufacturers are not being held accountable within product liability law, *at least in the USA*, due to the actions of the

U.S. Congress in 1986 when it passed the ***National Childhood Vaccine Injury Act*** (NCVIA).

By 1985, vaccine manufacturers had difficulty obtaining liability insurance. ... Because of this, Congress passed the National Childhood Vaccine Injury Act (NCVIA) in 1986, establishing a federal no-fault system to compensate victims of injury caused by mandated vaccines.

[https://en.wikipedia.org/wiki/National_Childhood_Vaccine_Injury_Act]

[Who says vaccines are safe, if Congress in 1986 recognized injuries caused by vaccines? Don't people have the inherent right to protect themselves and their children from known vaccine adverse health effects, especially neurotoxins and toxic chemicals?]

Cowpox Definition

noun

a viral disease of cows' udders which, when contracted by humans through contact, resembles mild smallpox, and was the basis of the first smallpox vaccines.

[Dictionary online]

Cowpox is a viral skin infection caused by the cowpox or catpox virus. This is a member of the Orthopoxvirus family, which includes the variola virus that causes smallpox. Cowpox is similar to but much milder than the highly contagious and sometimes deadly smallpox disease.

What is the treatment for cowpox?

However, studies in mice suggest a role for the viral DNA polymerase inhibitor cidofovir, given parenterally, **topically**, or in an **aerosolized** form, for **disseminated cases of cowpox**. Patients should be made aware that their lesions are potentially infectious, **but no person-to-person transmission has been reported.** Jun 19, 2018

[<https://emedicine.medscape.com/article/1131886-treatment>]

Medical Care

Because **cowpox is generally a self-limited disease**, **treatment is largely supportive.** Patients often do not feel well and require bed rest or, occasionally, hospitalization.

[<https://emedicine.medscape.com/article/1131886-treatment>]

What is the treatment of cowpox?

There is **no cure for cowpox**, but the disease is self-limiting. **The human immune response is sufficient to control the infections on its own.** The lesions heal by themselves within 6–12 weeks. Often patients are left with scars at the site of the healed pox lesions.

Patients may feel unwell and require bed rest and supportive therapy. Wound dressings or bandages may be applied to lesions to prevent spread to other sites and potentially to other people.

Patients with underlying skin conditions, such as atopic dermatitis, may be at greater risk of generalised cowpox.

[<https://www.dermnetnz.org/topics/cowpox/>]

How many people have died from cowpox?

The scourge of the world. An estimated 300 million people died from smallpox in the 20th century alone. This virulent disease, which kills a third of those it infects, is known to have co-existed with human beings for thousands of years.

The question above refers to cowpox, but the data “*spinmiesters*” cite smallpox deaths!

What kind of transparency, plus scientific accuracy, is that in reporting medical and health information over the Internet? Doesn't that represent an example of *real fake news*?

Vaccine MIS-information probably is the primary example of fake news on the Internet!

I believe I can make that statement unequivocally, as the above discussion of **cowpox not being smallpox** clearly demonstrates, plus my researching vaccine science data since the 1980s!

In England, the **Royal Society For Public Health, Vision and Practice** published online its 36-page report [“Moving The Needle, Promoting vaccination uptake across the life course,”](#) which clearly sets out the projected long-range plans for all the vaccines coming from Big Pharma.

In the above Report's section titled “*Responsibility of the press,*” we find this:

The press, therefore, has a responsibility to share accurate, evidence-based information about vaccinations, given the vital role vaccinations play in improving and

maintaining the health of the population. [Pg. 32] [CJF emphasis everywhere]

No truer words spoken, but definitely not practiced by mainstream media!

There are thousands of peer-reviewed articles regarding the dangers and downfalls of vaccines, [their ingredients](#) and harms [vaccine package inserts [Contraindications, Adverse Events](#)] etc. published online, and

- the CDC's VAERS system <https://vaers.hhs.gov/>;
- the HHS HRSA Vaccine Injury Compensation Payout Data & Statistics reports <https://www.hrsa.gov/sites/default/files/hrsa/vaccine-compensation/data/monthly-stats-march-2019.pdf>;
- PubMed <https://www.ncbi.nlm.nih.gov/pmc/>;
- National Vaccine Information Center <https://www.nvic.org/>;
- Children's Health Defense <https://childrenshealthdefense.org/>, just to mention a few.

Is there an obvious Conclusion?

If Jenner's ignorance, misinformation and 'scientific' lie(s) have been promoted since the 1700s, isn't it time to confess the mistake; correct the science; and re-establish scientific integrity within medicine and pharmacology?

Remember, "***Repeat a lie often enough and it becomes the truth***", is a law of propaganda often [attributed to the Nazi Joseph Goebbels](#).
