

“Incubus Project” – Second Evaluation (96 Hours of Exposure)

[“Incubus Project” – Second Evaluation \(96 Hours of Exposure\)](#)

by [La Quinta Columna](#)

March 11, 2024

Growth formation of material from the Comirnaty Pfizer injectable under certain conditions (using a reptile incubator).

After 96 hours of exposure at 37 degrees Celsius (simulating human body temperature) and constant ultraviolet light stimulation, we proceed to analyze the result again by optical microscopy.

Haxon Achilles II Microscope, bright field

Magnification: 120 X – 1800 X.
