COVID Not Isolated

There are a set of “COVID symptoms” that people can experience. The list may include the following, but may also not be related to COVID at all:

- Fever or chills
- Phlem-less Cough
- Shortness of breath or difficulty breathing
- Fatigue
- Muscle or body aches
- Headache
- New loss of taste or smell
- Sore throat
- Congestion or runny nose
- Nausea or vomiting
- Diarrhea

Scientifically, the proposed virus called Coronavirus, or COVID19, has not been isolated. See page 39 of the CDC document where the CDC reports the virus is not available. So, what is causing the symptoms?

Raising HAVOC In The Skin

If the Coronavirus is incognito, could the cause of COVID symptoms be related to something in the environment? Could the recent activation of the Fifth Generation, or 5G frequencies,

on human skin create symptoms of COVID based on the intensity of perspiration?

In 5G research since 2008, scientists have shown evidence that the coiled portion of the sweat duct in upper skin layer is regarded as a helical antenna in the sub-THz band. In their December 2019 article in Bio Heat Transfer, they warn:

*One must consider the implications of human immersion in the electromagnetic noise, caused by devices working at the very same frequencies as those, to which the sweat duct (as a helical antenna) is most attuned. **We are raising a warning flag against the unrestricted use of sub-THz technologies for communication, before the possible consequences for public health are explored.***

Because research has shown that skin can act as a mechanism for exchanging waves between 5G towers and dermatologic cells. The authors questioned “whether millimeter waves in 5G technology could contribute in constructing some viruses like COVID-19 within a cell.”

An Editorial published in the July 2020 [J Biol Regul Homeost Agents](#), set out to answer that question, but was subsequently retracted. However you can read it here, in full: [5G Technology and induction of coronavirus in skin cells](#):

In this research, we show that 5G millimeter waves could be absorbed by dermatologic cells acting like antennas, transferred to other cells and play the main role in producing Coronaviruses in biological cells. DNA is built from charged electrons and atoms and has an inductor-like structure. This structure could be divided into linear, toroid and round inductors. Inductors interact with external electromagnetic waves, move and produce some extra waves within the cells.

The shapes of these waves are similar to shapes of hexagonal and pentagonal bases of their DNA source. These

waves produce some holes in liquids within the nucleus. To fill these holes, some extra hexagonal and pentagonal bases are produced. These bases could join to each other and form virus-like structures such as Coronavirus. To produce these viruses within a cell, it is necessary that the wavelength of external waves be shorter than the size of the cell. Thus 5G millimeter waves could be good candidates for applying in constructing virus-like structures such as Coronaviruses (COVID-19) within cells.

The authors further [prove their case](#):

When an electromagnetic wave passes the cell membrane and the nuclear membrane, it induces an extra magnetic field within the DNA inductor and interacts with its fields.

A DNA is built from charged particles and according to laws of physics, by any motion of these particles, some electromagnetic waves emerge

(15). Also, the structure of a DNA is similar to the structure of an inductor (16) in a receiver and can produce some waves. Thus, a DNA could emit some waves and interact with external waves. However, most waves have a length more than the size of cells and pass them without any effect. Only limited waves with lengths smaller than millimeter could penetrate into cell membrane and interact with DNA inductors. These wavelengths could be observed in 5 G technology.

For more information on the deployment and symptoms of 5G technology, see my articles, [Planned Obsolescence of Health Under the 5G Grid](#), and [Strategizing Microwave Warfare of 5G](#).

The Frequency Factor

If we connect the dots, there are direct relationships between the first pandemic outbreak locations, mandatory vaccine programs, and 5G activation.

China began compulsory vaccinations on December 1, 2019, under the The Vaccines Administration Law, which the People's Republic of China adopted on June 29, 2019.

Soon after China and South Korea became main locations for mandatory vaccines, the 5G towers were launched on November 1, 2019. Italy was the so-called Epicenter of Coronavirus in January 2020, with cases being tied to SARS-CoV-2. Instead of stopping flights and locking down the country, should an investigation into recent vaccines and 5G activation have begun?

5G towers utilize frequencies, that affect the body at the level of DNA. They are microwave/radio wave frequencies "range anywhere from 3 kilohertz (kHz) up to 300 gigahertz (GHz)." Within this range is the range is the absorption spectrum of oxygen molecules (60 GHz).

[Countrywide use of the 60 GHz RF \(Radio Frequency\) band](#) along with EIRP (Effective Isotropic Radiated Power) include the following areas:

- US and Canada
- Europe
- South Korea
- Japan
- Australia
- China

The symptoms of coronavirus, in individuals tested, are similar to lack of oxygen, seizures and a phlegm-less cough.

Are the frequencies of 5G a critical factor to the sudden deaths attributed to a virus that is not influenza?

Does the 5G activation activate more than 5G waves?

Millimeter waves are currently used by the U.S. Army as a crowd control dispersal weapon called Active Denial Systems.

Does the ionization of metals and chemicals inside the body by 5G come from vaccines, toxic air, and other environmental exposures? Read more in the article [When The Flu is not The Flu](#).

The Path Forward

Is the pandemic a PsyOp? A distraction? For what? A global super brain? A Transhumanist Agenda?

Can we transcend the illusion being manufactured to create a heart-based reality?
