

# Jerm Warfare's Jeremy Nell & Dr. David Rasnick on the Great Cancer Swindle

Jerm Warfare's Jeremy Nell & Dr. David Rasnick on the Great Cancer Swindle

*TCTL editor's note:*

**Brief excerpt from the interview:**

**Dr. David Rasnick:**

*The prevalence of cancer, the increase of cancer worldwide is due to the increase in carcinogens in our environment...*

**Jerm (Jeremy Nell):**

*Hold on, Dave. So, are you saying that, for example, during the time of the Roman Empire, cancer would have been... cancer prevalence would have been very low?*

**David:**

*Yeah. Pretty close to zero.*

**Jerm:**

*Wow. Okay. That's interesting.*

**David:**

*Even before the industrial revolution it was pretty close to zero,*

*The industrial revolution increased carcinogens, pollutions in the environment. Almost all cancer, almost all cancer, is due to environmental carcinogens – poisons that we put in the environment.*

**Jerm:**

*And could those poisons also be perhaps **childhood vaccinations**?*

**David:**

*Oh, Lord, yes... My goodness yes. Our environment includes what we breathe, what we eat, what we're exposed to, what we inject in ourselves...*

---

## **David Rasnick on the Great Cancer Swindle**

***The causes of cancer are not what we're told they are***

by [Jeremy Nell](#), [Jerm Warfare](#)

July 11, 2022

[David Rasnick](#) is a biochemist with decades of research in [AIDS](#) and cancer, and returned to my podcast to discuss cancer and why most of what we're told is wrong.

Cancer is an extremely complex subject, so I'd recommend reading [his summary article](#) in which he outlines, in fairly

layman language, the foundation of his argument.

Basically, it's known as Aneuploidy Theory, and it is in stark contrast to the current [Big Pharma](#) model of cancer. Obviously, Aneuploidy Theory is "discredited" and dismissed, as a result. But, as pharmaceutical scientist [Mike Donio said](#), the pharmaceutical industry is [untrustworthy](#) and thrives on sick people and [unscientific methodology](#).

David's conversation is worth watching because he used slides, but it's possible to get by with audio only.
