

Jerome Corsi on Oil Not Being a Fossil Fuel

[Jerome Corsi on Oil Not Being a Fossil Fuel](#)

Oil is not running out. In fact, oil is one of the most abundant liquids on Earth.

[Jerome Corsi](#) is an author with a special focus on energy and all things related to actual climate science (rather than the [establishment garbage](#) perpetuated daily).

Jerome has published 25 books on economics, history, and politics, including six New York Times bestsellers, and was a senior editor at World Net Daily.

As [Tony Heller noted](#), there is no climate emergency. As [Patrick Moore noted](#). As [Denis Rancourt noted](#), Earth is fine. As [Valentina Zharkova noted](#), the biggest driver of temperature is the sun.

Book Worth Reading

Jerome is writing a trilogy in which he debunks all of the mainstream propaganda surrounding *Sustainable Development*, which is the UN's version of the World Economic Forum's [Great Reset](#), which is essentially [centralised global control](#) (and has nothing to do with Earth's climate).

The first in the trilogy is [The Truth About Energy, Global Warming, and Climate Change](#).

Jerome joined me for a conversation in which he addresses

- oil not being a fossil fuel;
- oil being abiotic and almost as abundant as water;
- the NAZI Germans making oil during WW2;
- the conspiracy to market oil as a scarce “fossil fuel”;
and
- electric cars and why even Elon Musk knows they’re
rubbish.
