

La Quinta Columna: Demonstration of Tobacco/Nicotine Destroying Injectable Nanotechnology

[La Quinta Columna: Demonstration of Tobacco/Nicotine Destroying Injectable Nanotechnology](#)

Truth Comes to Light editor's note: Below you will find a video released today by La Quinta Columna wherein Ricardo Delgado shares the work of one of their associates, Rafa Calvin, who demonstrates the destruction of (apparent) nanotechnology as found in dental anesthetics (used locally via injection) by applying drops of a distilled water/tobacco mixture. As readers here will know, La Quinta Columna has done great work in researching the graphene and nanoparticles found in the so-called covid vaccines. They have also revealed similar toxins in dental anesthetics.

The video speaks for itself. As the video was produced in Spanish, I have included their transcript (as found in the video) along with a few additional translated notes that were displayed in Spanish without English translation. You will need to watch the video to understand context of Richardo's words. At approximately 5:05 minutes into the video, the demonstration begins.

This has inspired me to begin researching the medicinal uses of tobacco throughout history and spanning many cultures. As with most natural healing options gifted to us by nature, the strange humans who seek to control by any means have buried the truth and offer us endless toxins in their place – all requiring “money”, thus not only

poisoning us, but harvesting our energy by making us work within their system to supply them with “payment”.

Nicotine Destroys Injectable Nanotechnology

by [Ricardo Delgado](#), [La Quinta Columna](#)

August 23, 2024

La Quinta Columna would like to inform you that we are working on further studies in the light of the recent findings.

Today, Friday 23rd August, we will begin to carry out more tests directly on the Pfizer “vaccine”.

We do not want with this discovery to encourage smoking in the population, only to show the evidence that nicotine, as we already suspected, apparently interacts negatively with what has been introduced to millions of people around the world.

We are continuing our research and will show more results in the near future.

Yours sincerely;

La Quinta Columna, .Ricardo Delgado

Transcript:

Let's remember some news. Some articles that were published at

the time and recently as well.

For example, Turkish doctor:

‘Smoking and drinking alcohol make COVID-19 vaccines less effective.’

And someone will say, from now on... Well, if precisely what they call vaccines, we now know that it is a neuronal implant that precisely amplifies and catalyzes microwave electromagnetic radiation because it contains graphene.

In this sense. Smoking and drinking, as they say here, and we’re not going to encourage that here, eh?

But smoking, which is what we are focusing on, does make them less effective, since it would cause fewer deaths. Right?

That’s the first logic that comes to mind.

The following study tells us:

Vaccines COVID [covid vaccines] and tobacco. Here we are focusing precisely on nicotine.

‘Can smoking affect the effectiveness of Pfizer doses?’ he says.

A study that has yet to be reviewed claims that people who smoke develop fewer antibodies.

Another example. The Infobae newspaper published: ‘Are COVID vaccines less effective in smokers?’

This is to say, do they do less harm? This is the question we have to ask ourselves?

A recent review of studies showed that antibody levels are lower in this group compared to non-smokers.

What is the cause? Well, we are going to read it here because

these are his arguments – his lies, in short.

The study here or the news, February 2022, okay?

And we must remember the emphasis that the Minister of Health, Monica Garcia, places on the issue of tobacco. Listen.

[Monica Garcia] 'Today is a great day for quality of life. Today, the plan for tobacco control that had not been updated for 14 years was approved and I insist that it puts our country back on track...'

And after 14 years it had not been updated and now they are making it more restrictive for the health of the Spanish people above all, right?

[Monica Garcia] 'The vanguard of the world in the fight of tobacco, which is the main cause of preventable mortality. As I said, it is the cause of 30% of cancers in our country and is also the cause of more than 16 types of cancer. Today we do it...'

We don't talk about graphene, the cancers it causes and so on. No, we don't say that. It far exceeds those of tobacco, almost certainly. And in record time, too, eh?

[Monica Garcia] 'We are going with ambition, we are doing it with pride, we are doing it with coherence, and we are also doing it without fear. Dusting off this plan will give more years of life to our citizens and that will give a better quality of life in those years.'

Clear!...

[Monica Garcia] 'It is others who will have to explain why they do not want to adhere to this plan. It is others who will have to explain why they turn their back on scientific evidence, why they turn their back on health, why they turn their back on their own technicians, and they will have to explain why they are not in favour of a consensus that I

believe is a fairly broad social consensus. Regardless of this refusal, the origin of which we do not know exactly, they will have to explain it to us. I don't know if they have given in to the pressure. We don't know if they have already embarked on this established denialism.'

Wow!

[Monica Garcia] 'that some people in this country have, we don't know if..'

So, denialism has to do with tobacco?

Do you see how this woman's subconscious instinctively betrays her?

What does denialism have to do with a proposal to restrict, after all – the sale or prohibition of tobacco in this regard? See?

Because they're not very smart, huh?

And when she's reading, it all seems somewhat coherent since they write the speech for her, but when she interprets, she completely screws up.

[Monica Garcia] 'As if it were already the result of the obsessive attack on the central government. But this attitude will not tarnish the splendid and wonderful news we have today. And I insist that in our country we will once again be at the forefront of the fight against smoking and at the forefront of the fight for the health of our citizens.'

Denialism, smoking!

But this all stinks pretty bad, huh? In the sense of making you see that now, precisely now. This incisive fight against tobacco and which reduces the effectiveness of the COVID vaccine and the effectiveness of what they call a vaccine,

which is not a vaccine – will not in any case reduce the effectiveness of this intracorporeal technology introduced?

Indeed, La Quinta Columna has carried out some kind of tests on the part of that follower Rafa Calvin. And he has mixed. Let's watch the video.

[Video begins.]

Nicotine extracted directly from a gram of tobacco with distilled water and added it to a sample of a dental anesthetic, local, for dental use, where that micro tech appears.

First part 5cc of distilled water, 1 gram of tobacco. Place the mixture in the centre of the object holder.

[Image] Dental anesthetic 30 days drying.

[Hundreds of micro tech bits can be observed at 100x magnification.]

Well, I'm going to make a little clarification for people who are asking what this is. Surely there is still a lot of research time left, even from the year 2021-2022 until now of La Quinta Columna. What we are seeing is an intracorporeal network of biosensors introduced in local anesthetics. OK?

[I put a small amount of the water/tobacco mixture.]

Well, good for Rafa Calvin. Let's watch another video. I think they show more results here. There it goes.

Let us also remember what we said about nicotine having a neuroprotective action, and that there were some studies that seemed to determine that it could be an effective treatment for diseases such as Alzheimer's, Parkinson's and other types of neuropathies.

However, it does not necessarily have to be inhaled and

smoked. There are many ways to administer nicotine, including chewing gum. This substance passes in certain doses into the blood, which we now know is contaminated with you know what.

It is an indication that should be tested and more tests must obviously be done.

Starting tomorrow, I'm going to get pure liquid nicotine, which they also sell, and we're going to test the Pfizer vaccine in different doses and quantities. We will show the results as soon as we have it.
