

La Quinta Columna: Targeting the Brain

[Targeting the Brain](#)

by [La Quinta Columna](#)

October 6, 2024

Video available at [Odysee](#) & [Rumble](#)

Transcript:

Self-assembling technology, that has an affinity for the central nervous system, whose purpose is to impregnate neurons, thereby creating an artificial neural network.

Optoelectronics is a branch of photonics related to the study and application of electronic devices that interact with Light, systems in which electrons and photons coexist.

Optoelectronic devices operate as electro-optical or opto-electrical transducers.

Millions of people have been IMPLANTED with graphene-based liquid nanotechnology through the co-called COVID "vaccines".

Currently, all types of injectables contain graphene, which acts as fuel to make all this technology work.

Self-assembling technology, that has an affinity for the central nervous system, whose purpose is to impregnate neurons, thereby creating an artificial neural network.

You can see it for yourself by accessing the Telegram channel: **Mira al microscopio** [<https://t.me/miraalmicroscopio>]

What you are going to see next is not optogenetics. It's optoelectronics.

Rafael Yuste, Spanish neurobiologist and ideologist of the Human Brain Project.

One of the branches of your research is optogenetics. What does it really consist of and what is its objective?

The second goal of BRAIN is to artificially “write” activity into neurons, and one of the ways we seek to do this is through optogenetics. Optogenetics uses genes for proteins that are sensitive to light; these are introduced into neurons, so the proteins make it so that when you shine light on the neuron, it fires. It is a way of activating neurons with light, through proteins, genetically engineering them so that proteins that are photosensitive are expressed.

Optoelectronic locomotion control.

Experiment realized by Ranier Guíérrez at the Stanford OIL Workshop on 25 July 2011.

"The possibility that machines can read our thoughts and even insert thoughts. Insert feelings and"

~ Former President of Chile, Sebastian Pinera

The cover is called Neuralink and apparently we have been made to see that it is voluntary.

"But does this not imply some kind of surgery?"

~ [unidentified interviewer]

"Not necessarily. You can go through the veins and arteries."

~ Elon Musk

"There are also people who think that the vaccines against COVID put a chip in us whereby the Chinese, from any laboratory in Beijing going to control our lives.

"What does it sound like, a joke?"

~ President of Spain, Pedro Sanchez

Recording with night vision camera HYCMICRO CHEETAH

Don't use Bluetooth headsets unless strictly necessary.

Similarly, mask the camera of your mobile phone if you don't need it.

Thanks to Rafa Calvin and Miguel Angel for the recordings.

Do you understand it now?
