

Medical Ignorance and the Mass Murder of Coronavirus Patients

[Medical Ignorance and the Mass Murder of Coronavirus Patients](#)

by [W. Gifford-Jones, MD](#), [Orthomolecular Medicine News Service](#)
October 20, 2020

(OMNS Oct 20, 2020) In treating the sick, Hippocrates, the Father of Medicine counselled, "First, do no harm." Unfortunately, this cherished principle has not been followed in caring for patients with coronavirus infection. Losing a loved one due to cancer and other diseases is always tragic. But losing one due to the coronavirus pandemic when it could be prevented is an unforgivable act resulting in the mass murder of innocent lives. It has happened due to ignorance about history, hypocrisy, a lack of training of doctors about alternative medicine, and **closed minds about the life-saving medical benefits of high doses of intravenous vitamin C.**

I would not have the knowledge to write this article if one event in my life had not happened. At 74 years of age I nearly died of a serious heart attack. Doctors said I'd be dead in a few years without the help of cholesterol-lowering drugs. Luckily, several years earlier I had interviewed Dr. Linus Pauling, two-time winner of the Nobel Prize. He advised me of the important role of vitamin C in decreasing the risk of coronary disease. This is when I made one of the most vital decisions of my life. I decided to take 10,000 milligrams (mg) of vitamin C daily, rather than believe Big Pharma. But I also worried because Pauling, although a brilliant chemist, was not

a doctor. Was he right about vitamin C? It was only years later when Dr. Sidney Bush, a English researcher proved that vitamin C could reverse atherosclerosis (hardening of arteries) that I knew I had made the right decision. [\[1\]](#)

Now, 22 years later, the doctors who told me I'd be dead in a few years without cholesterol-lowering drugs are dead, and I'm in my 97th year, still alive. It's this experience with the cardiovascular effects of vitamin C that's triggered my interest in the anti-infective and other medical benefits of vitamin C, especially how it can decrease deaths from viral and bacterial diseases.

Klenner went on to show that large doses of vitamin C could also cure other viral diseases such as meningitis, hepatitis, measles, mumps, pneumonia, shingles and even the poisonous bite of a rattlesnake. [\[2-4\]](#) Since that time other researchers have reported that there is no viral disease that high-dose IVC cannot successfully treat.

But Klenner did not win a popularity contest with his colleagues. He wrote in frustration that *"Some physicians would stand by and see their patient die rather than use ascorbic acid because in their finite minds it exists only as a vitamin."*

Since that time closed medical minds have resulted in thousands of deaths from coronavirus and other diseases in Canada and worldwide. Because of a misconception that vitamin C is just another vitamin. But there is proof that vitamin C is a potent anti-infective nutrient that attacks both viral and bacterial diseases.

Infection triggers a severe inflammatory cellular reaction in the body which results in a decrease in vitamin C. It's like being caught in a snow storm on a lonely road and running out of gas. But in this case white blood cells need C to fight the infection. And if you have not been taking C on a regular

basis, your white blood cells without C are like a gun without bullets.

Many people do not realize that nearly all animals make their own vitamin C. Humans lost this ability eons ago due to a genetic mutation. For instance, dogs produce 5,000 milligrams (mgs) daily. Health Canada maintains humans need only 90 mgs. But if a dog gets an infection, it will automatically produce up to 20,000 mgs daily!

During the coronavirus pandemic I've listened to Medical Officers of Health, TV anchors, politicians and medical experts all discuss the importance of distancing and frequent hand washing. But I have only heard one discuss the advantages of vitamin C and D in building up the body's immunity. [\[5\]](#) And I have not heard any explain how the use of high doses of IVC could save lives.

Dr. Lendon H. Smith outlined the clinical experiences of Frederick Klenner in "Clinical Guide to the Use of Vitamin C". It contains a wealth of information on how vitamin C treats many diverse diseases. And how prescribing insufficient amounts of vitamin C can lead to failure in therapy. This medical information is available for all to read. [\[6\]](#)

I've have written before that if a family member died due to coronavirus infection and doctors and hospital refused to use IVC, I would contest this situation in a court of law. I believe I would win because historical evidence is so overwhelming that large doses of C save lives.

The hypocrisy surrounding vitamin C is mind boggling. Dr, Linus Pauling complained, "The medical community requires rigorous evidence supporting vitamin C, but accepts flimsy evidence against it." Little has changed since I interviewed Pauling. This deficit is evidently caused by the minds of medical professionals refusing to accept scientific fact. And we will never know the number of needless deaths this has

caused during the pandemic.

A year ago, as a journalist, I was invited to be a member of the *Orthomolecular Medical News Service*. It's international editorial board is composed of distinguished physicians, professors, and researchers. Several months ago I asked all members how they would treat several viral infections. The overwhelming response was "high dose intravenous vitamin C." OMNS has published twenty-two physician case reports of success with IVC. [\[7\]](#)

Since February, researchers in China have been conducting double-blind studies on IVC. This means one group will receive IVC and a control group will get a placebo. Some studies have already been completed, and the results show that IVC saves more lives than placebo. [\[8\]](#)

"Dr. Enqiang Mao, chief of emergency medicine at Ruijin Hospital, Shanghai, stated that his group treated ~50 moderate to severe cases of COVID-19 infection with high dose intravenous vitamin C.

"The IVC dosing was for 7-10 days, with 10,000 mg for moderate cases and 20,000 mg for more severe cases.

"All patients who received intravenous vitamin C improved, and there was no mortality."

"There were no side effects reported from any of the cases treated with high dose IVC."

(Richard Cheng, MD, PhD, reporting from Shanghai)

<http://orthomolecular.org/resources/omns/v16n12.shtml>

But even in one of these recent laudable studies, there was a flaw. According to the report, all patients received a certain dose for moderate infection while others a higher dose for a more severe one. But patients who died had not received the higher dose. [\[9\]](#)

This reflects everything that Dr. Linus Pauling and Dr. Frederick Klenner stressed. As Pauling told his critics, "It's the dosage!" Or, as Klenner claimed, "Some infections require a much larger dose." As we all know, half an aspirin will not cure a migraine headache.

But there is more disturbing news. Chinese researchers are experiencing trouble getting their findings published. Contacts also tell me that doctors who use IVC in North America are being harassed by authorities. In some case, being told that if they persist they will lose their license to practice medicine.

To get an update on what was happening in some parts of Canada and the U.S I contacted several infectious disease specialists, Medical Officers of Health (MOH), and university hospitals, asking a simple question. "Do you prescribe intravenous vitamin C or know of anyone who does to treat coronavirus infection? And if terminal patients are not receiving IVC, why is this the case"?

It proved to be a time-consuming assignment. Many replied they would get back to me but failed to do so. I could only conclude they were not using IVC and did not want anyone to know about it.

Or they responded, "We have checked with our infectious disease specialist and confirm that high dose C is not being used to treat coronavirus infection."

What was shocking is that not a single Medical Officer of Health replied that IVC was being prescribed to those dying from coronavirus infection.

Another surprise was the reaction of Johns Hopkins one of the great hospitals of the world. Its distinguished professors were the first to introduce the value of bedside teaching for students. During this pandemic they were considered the authority in reporting the number of coronavirus deaths. So, I

was shocked to receive this response, “We are not conducting clinical trials or administering C as a treatment for COVID 19.” And even Harvard Medical School where I spent so many years as a student and later training as a surgeon, never replied to me.

What is going to happen? It’s that the Chinese study will likely fail to end the controversy and patients will continue to die needlessly of this virus. I was hoping that one infectious expert, or Medical Officer of Health, would possess the intellectual curiosity to ask, “I wonder if high does IVC could save lives?” It’s tragic this has not occurred. Some would label this as medical ignorance, others as malpractice, or if a loved one has died as murder, and finally a court of law looking all the facts decide it’s been mass murder.

So, we have a unique situation. It’s been said that war is far too important to be left to generals. Due to the economic chaos caused by coronavirus this disaster may be much too important to be left to medical experts when so many North Americans have suffered.

It’s time for the government to demand that our medical schools conduct a study of IVC. There is no shortage of patients. We have the scientific talent in our universities. Vitamin C is inexpensive and will virtually never cause complications. Vitamin C has never killed anyone. Besides, this study could be done in a short time and not require thousands of patients.

Who will grasp the moment and save countless lives?

(Syndicated columnist W. Gifford-Jones, MD, (also known as Kenneth Walker, MD) graduated from Harvard Medical School in 1950. He did surgical residencies at McGill University, the University of Rochester, and Harvard Medical School. Still an activist, his website is <http://www.docgiff.com>.)
