Everything You Think You Know About Viruses, Is Probably Nonsense.

by [Jeremy Nell](#), *Jerm Warfare*

June 2, 2022

Mike Stone runs viroliegy.com, easily the most powerful and persuasive critique of virology, that I've come across.

I've chatted to a number of great minds on the topic of viruses, such as [Tom Cowan](#) and [Sam Bailey](#), and find myself convinced by their arguments.

In our conversation, Mike covers

- why virology is pseudoscience;
- what viruses are;
- the problems with definitions;
- direct evidence versus indirect evidence;
- Koch's Postulates and why they matter;
- the rejection of the Scientific Method;
- isolation and purification;
- genomics and genome sequencing; and
- the Rockefeller funding behind virology.

I strongly recommend reading [Bechamp Or Pasteur](#), which is a biographical exposé of the fraudulent work of Louis Pasteur and the forgotten work of Antoine Béchamp.
