

New Vaccines Will Permanently Alter Your DNA

by [Jon Rappoport](#)

I repost this story now because, in the rush to develop [a vaccine against the China coronavirus](#) in the next 90 days, public health officials are mentioning several experimental technologies—never before released openly for public use. (*China coronavirus archive* [here](#).)

One of those technologies is: DNA insertion.

The reference is the New York Times, 3/10/15, [“Protection Without a Vaccine.”](#) It describes the frontier of research. Here are key quotes that illustrate the use of synthetic genes to “protect against disease,” while changing the genetic makeup of humans. This is not science fiction:

“By delivering synthetic genes into the muscles of the [experimental] monkeys, the scientists are essentially re-engineering the animals to resist disease.”

“‘The sky’s the limit,’ said Michael Farzan, an immunologist at Scripps and lead author of the new study.”

“The first human trial based on this strategy – called immunoprophylaxis by gene transfer, or I.G.T. – is underway, and several new ones are planned.” [That was nearly five years ago.]

“I.G.T. is altogether different from traditional vaccination. It is instead a form of gene therapy. Scientists isolate the genes that produce powerful antibodies against certain

diseases and then synthesize artificial versions. The genes are placed into viruses and injected into human tissue, usually muscle.”

Here is the punchline: “The viruses invade human cells with their DNA payloads, and the synthetic gene is incorporated into the recipient’s own DNA. If all goes well, the new genes instruct the cells to begin manufacturing powerful antibodies.”

Read that again: “the synthetic gene is incorporated into the recipient’s own DNA.”

Alteration of the human genetic makeup.

Not just a “visit.” Permanent residence.

The Times article taps Dr. David Baltimore for an opinion:

“Still, Dr. Baltimore says that he envisions that some people might be leery of a vaccination strategy that means altering their own DNA, even if it prevents a potentially fatal disease.”

Yes, some people might be leery. If they have two or three working brain cells.

This is genetic roulette with a loaded gun.

And the further implications are clear. Vaccines can be used as a cover for the injections of any and all genes, whose actual purpose is unannounced.

The emergence of this Frankenstein technology is paralleled by a shrill push to mandate vaccines, across the board, for both children and adults. The pressure and propaganda are planet-wide.

The freedom and the right to refuse vaccines has always been vital. It is more vital than ever now.

What does wall to wall propaganda about an “ominous epidemic” achieve? You have one answer. If it doesn’t immediately pop into your head, read this article again.
