

Parasites Among Us

[Parasites Among Us](#)

by [Rosanne Lindsay](#), Naturopath, [Nature of Healing](#)

August 18, 2021

Parasites, like any life form, have a purpose. They are there to clean up the mess, the toxins that accumulate over time. Chemicals and metals in food, air, and water are chief among the garbage heap that draw parasites. However, there is also the 4G and 5G frequency exposures which intensify our parasites, yeast, and our smallest inhabitants.

Like all life, parasites appear when the environment favors their presence.

In the body, parasites favor an acidic pH tissue state of < 6.4 pH. By their activity of living, multiplying, and dying off, your body's cells and tissues can drop as low as 3-4 pH, and you can lose your ability to exchange oxygen efficiently. The body becomes an open door to more pathogenic microbes, yeast, mold, and fungus. Cancer cells thrive. Cancer is simply a word for cells that grow out of control; growth for the sake of growth is similar to sprawl. When it comes to pathogens, people can have parasites without cancer but cannot have cancer without parasites. Cancer reflects parasites.

There are many reasons for the continued uptick in humans of parasites, yeast, fungus, mycoplasma, Lyme disease, and its multiple co-infections. Physical parasites reflect emotional or energetic parasites. Do people always ask you for things? Do they unload their problems on you and leave? Are people around you agitated, irritated, detached? Do you feel bothered?

Do you make it a habit to drink alcohol or *spirits*, or abuse

drugs? Alcohol and drugs create holes in the aura of the energy body. These holes act like portals, or open doors, to attract parasitic relationships. Auric attachments impede the body's energy flow and ability to clear itself physically.

In the physical body, Lyme is a parasitic disease affecting [over 400,000 people each year](#), twelve times more than the [35,000 annual cases](#) that the [CDC reports](#). Because Lyme is "The Great Imitator," and shares symptoms with other disease labels, it is often misdiagnosed.

Symptoms of Parasites

Affected Area	Symptoms
Digestive Issues	gas, bloating, constipation, diarrhea, nausea, vomiting
Abdominal pain	upset stomach, cramps, pain, tenderness
Stool	greasy loose stool, worms, parasites, Candida, mucus, eggs
Eating	sweet cravings, constantly hungry, increase or loss of appetite
Energy, Wellbeing	tired, fatigue, exhaustion, mood swings, depression, muscle/join pain, body aches
Skin	skin rashes, eczema, hives, rosacea
Sleep	poor sleep, insomnia, nightmares, night sweats, teeth grinding in sleep, anus itching at night
Genitals	itching around genitals, infections
Overall health	unexplained weight loss or gain, nutritional deficiencies, dehydration, fever

Misdiagnosed

In 2006, a group of Spanish scientists in Salamanca, Spain, [conducted a study that followed the lifecycle of the](#)

[Wolbachia](#) bacteria that lives inside the *Dirofilaria immitis* worm and they obtained 80 blood serum samples of human patients who were diagnosed with pulmonary dirofilariosis. *Dirofilaria immitis* is the scientific name for a heart worm that infects the heart and lungs of its hosts, transmitted by a mosquito bite. Type “*Dirofilaria*” into YouTube and you will see videos of people who have worms inside their eyes. A search of the Pubmed database turns up 36 papers describing *Dirofilaria* in humans. Six of the studies are canine-human studies and thirty relate to humans. [Ascaris Lumbrico](#) is another parasitic species.

There are hundreds of large parasites that can easily enter the human body, take up residence and cause a variety of life-threatening diseases. *Dirofilaria* is a roundworm, otherwise known as a nematode, and there are millions of species. Adult worms can lay eggs every three and a half days and the eggs are microscopic. Eggs that hatch inside the human body become larvae that are also microscopic. Either of these forms can move through bloodstream and become embedded anywhere.

Medical doctors misdiagnose fatty tumors in the lung and other areas of the body as cancer. [According to the Centers for Disease Control](#) (CDC), if genetic testing were done, doctors would find worms.

We were amazed when we found this new type of disease – tapeworms growing inside a person essentially getting cancer that spreads to the person, causing tumors. – Atis Muehlenbachs, M.D., Ph.D., [staff pathologist in CDC's Infectious Diseases Pathology Branch \(IDPB\)](#)

Removing fatty tumors will not prevent these tumors from returning, unless you address the underlying cause. Cancer is not a big question mark without a solution. If investigated properly, a systemic infection of parasites and worms may be found. If you are concerned about a recent insect bite or a

developing rash, you can request an analysis for Lyme from Ticlab.org.

Mycoplasma is a genus of parasitic bacteria that lacks a cell wall around its cell membranes. This characteristic makes them naturally resistant to antibiotics that target cell wall synthesis. Though rarely investigated by doctors, Mycoplasma pneumonia is most often seen in children and youth under age 40. It lives in the mucous membranes of the respiratory tract and air sacs around the heart.

High numbers of Lyme and its [co-infections](#) argue against a tick-only vector, especially since this parasitic spirochete, anaerobic bacteria has also been [discovered in mosquitoes](#) and [biting flies](#), including [horse flies and biting insects](#). It suggests that the problem lies much deeper than the experts report.

The growing number of people living with parasites is not only a consequence of misdiagnosis, but also reflects the myriad ways [humans modify their environment](#), including the addition of [new frequencies](#). There is also evidence that some of these resistant bugs are created in labs where scientists conduct [secret bioweapon experiments](#). But they wouldn't do that, would they?

The Making of a Pandemic

The *novel* Coronavirus is nothing *new*. Evidence shows the genome and amino acid sequences of SARS-CoV is a manufactured product, [patented for vaccine production in 2007](#). Strange experiments combining [adenovirus transfected into HEK293 cells](#) derived from [human embryonic kidney cells](#) in 2006, and later in 2015, [bat spike protein in mouse adapted SARS](#) show the design and planning undertaken to bring the SARS-CoV vaccine to fruition in 2021.

With [recombinant DNA insertion experiments](#) now widely reported, it is not hard to find the trail that leads to a

manufactured flu-like pandemic. In 2017, when the [Federal government lifted a ban on making pathogens more deadly](#), Frankenstein's door swung wide open to unleash man-made parasites on a large scale. The release of this information was not in the form of a public warning. Such a disclosure is meant to be a form of 'informed consent,' even if no one sees it. *We have informed you. Do you consent?*

Truth is disclosed, if not widely publicized. For instance, one journal editorial titled [5G frequencies induce Coronavirus](#) in skin cells, was later retracted. It is also proving to be true that the [non-thermal effects](#) of wireless technologies also cause the proliferation and [multiplication of fungus, yeast, viruses, and mold](#). [Founder of Klinghardt Academy, Dietrich Klinghardt](#), MD, PhD, writes:

I personally suspect that the exposure to electromagnetic fields in the home and the microwaves from cell phone radiation are driving the virulence of many of the microbes that are naturally in us, and makes them aggressive and illness producing. Shielding patients from EMFs has been a more successful strategy to treating Lyme disease and to get people neurologically well than any of the antibiotics or any of the antimicrobial compounds. ~[Dr. Dietrich Klinghardt, MD, PhD](#)

By connecting these dots for yourself, you can begin to see the full picture of how biowarfare includes multiple avenues; both in the manipulation of patented microbial genomes, and in the use of electromagnetic frequency technology. The layering of 4G and 5G microwaves is a human experiment since 60 GHz frequencies interferes with both water and oxygen molecules to create a hypoxic state in living organisms. Equally egregious are the [Biotech companies given large grants from governments](#), authorized to develop the vaccines against the patented viruses, without any accountability or liability for their products.

How we interact with our surroundings determines whether we adapt and survive or not. Outer terrain reflects inner terrain.

Terrain Theory

As part of nature, our disease state reflects a relationship with our microbes and our tissue states. Claude Bernard, a rival of Louis Pasteur and his Germ Theory, understood that germs do not invade to cause disease, but rather the germ is a product of the condition of the terrain or tissue state, created within a cell. A virus is not an organism because it requires the components of a cell to survive. Once it leaves the cell it does.

In 1870, Bernards's colleague, Antoine Bechamp, observed that when conditions of pH, nutritional status, and toxicity shifted, so did the microbes. Bacteria shape-shifted to diverse stages of itself without losing its essence as it worked to adapt with its surroundings. The scene playing out was not one of *divide and conquer* but rather of *one for all and all for one*.

Dr. Enderlein later described this shape-shifter as the "endobiont," as the basis of all life, working in tandem with the body's terrain in peaceful coexistence.

As the endobiont evolves to a higher valence state, from bacterial to fungal and parasitic, its waste products poison body fluids and produce a new stage of disease. Parasites go unnoticed until they begin to cause digestive distress, fatigue, chronic diarrhea or constipation, blood pressure issues, and many other common symptoms, including but not limited to tumors. Unfortunately, these symptoms are usually attributed to other causes.

The disease process is not linear but multidimensional and electrodynamic with the whole system moving in harmonic resonance based on the unique patterns of each individual,

always in an effort to achieve homeostasis, as reflected in Nature. In his book *Holographic Blood*, Harvey Bigelsen MD, writes, "Disease is a living process."

CANcer Is Also CANDida

As a continuum of symptoms, acute disease is expressed as bacterial or viral, whereas chronic disease is fungal. Ultimately, cancer is a fungal adaptation. CANcer equals CANDida, both yeast and fungus. Once the body has exhausted all internal resources and begins to lose ground, the endobiont, as a fungus, begins the recycling process to gradually consume the organism.

For several years, more and more people have been treating cancer using a [veterinarian anti-parasitic drug called Fenbendazole](#), with excellent results. This dewormer for cancer is best described as "[inhibiting the progression of cancer and even killing some difficult-to-treat cancer types](#) including melanoma, lymphoma, lung cancer, prostate cancer, and glioblastoma."

Recently, many people have turned to the [anti-parasitic drug Ivermectin](#) with good results. Now scientists are saying Ivermectin can work on the symptoms of COVID for [less than \\$1 a day](#). Does that mean that people with COVID have parasites? Is all that is needed a return to a healthy balance of our microbes? A stronger immune system?

This is the universal story of life, adaptation, death and rebirth. If healing is to occur, intervention on all levels, is necessary. When balance returns to the terrain, the endobiont reverts back to its natural state. Bechamp called this process pleiomorphism, an understanding of how the one aspect, or one microbe, reflects The Whole.

Our microbes are in flux based on conditions of dysbiosis that we create through our emotional health. We invited them to live with us through our own ignorance. Parasites R Us. All

disease begins when physical and emotional landscapes clash with our ability to balance terrain. So we should ask what makes each of us susceptible to parasites at this time, more so than any other time?

Harmony in Nature

Why is all of this information hidden from the public? Modern medicine is mostly an allopathic for-profit system. Allopathic physicians use drugs and surgery to combat disease using codes billed by insurance companies. If there is a worm causing a blockage in a blood vessel, would a doctor want to prescribe an antiparasitic drug, or perform a profitable surgery?"

Meanwhile, Nature advertises two strong herbs that kill nematodes. The most famous one is Thyme, a culinary herb. Thyme also kills hook-worms, roundworms, threadworms, skin parasites. and several types of harmful bacteria. Another herb is Neem, derived from the leaves of Neem trees that are native to India and Pakistan. When the worm population in the human body overwhelms the immune system, it is known as a hyperinfection. At this stage, it is difficult to kill the worms with herbs. Frequency machines, used by natural health practitioners, can neutralize specific pathogens by their frequencies.

Friendly technology exists. We only have to look to Nature for the answers. What happens on the outside reflects what happens on the inside. Our relationships, whether harmonious or chaotic, all mirror the relationship we cultivate within ourselves. Our interactions create rhythmic waves of emotions that ripple out. The individual reflects the whole, as illustrated in Nature.

A parasitic relationship is a snapshot of emotional health. Parasites show up in life when we choose to give up our power to narcissists. When we allow others, including government officials, to tell us who we are, and what we need, we are challenged to either reclaim our bodies, or adapt and conform

to the suckers that will feed off of us at our expense. Do we choose to play victim or do we choose harmony?

The Germ Theory that underlies conventional medicine describes the body as victim to an invisible germ. Yet, rarely are medical tests done to identify which germs are the cause of symptoms. Is it because, when it comes to viruses, we each create them within our own cells?

We have allowed only those qualified by a medical license to identify the “germ” and to ‘call the shots’ as the solution. This ideology loses credibility under the weight of false information. For instance, in 2014, the [Council on Foreign Relations released a report finding](#) that the highest vaccinated populations are also those with the greatest number of outbreaks for the same infectious diseases. The US, Canada, the European Union, Australia and New Zealand, and Japan—each with the highest number of mandated vaccines—led the list of nations.

[The Office of Medical and Scientific Justice, in Sweden, analyzed the report, and suggested](#) the theory of herd immunity is flawed and offered several possibilities to explain the report: 1) vaccines are increasingly becoming ineffective and causing “immune dysfunction,” and 2) “vaccine antigen responses” may be reprogramming viruses while weakening the immune systems of the most vaccinated individuals.

Humans are 10:1 microbial cells to human cells. Just as humans perceive an attack on their biology, so too, do our microbes. As a defense mechanism against frequencies and drugs, they release biotoxins, which ultimately drives inflammation in the human body and worsens chronic infections of bacteria, fungus, yeast, and parasites.

When we choose to kill off our microbes with long-term antibiotics, we kill our smallest inhabitants, our

endobionts. We kill off ourselves. Antibiotic = antilife. Our choices cause our endobionts to shift into more pathogenic forms – into Superbugs not recognized by antibiotics. The endobiont doesn't die. It adapts to its changing environment. In the same manner, humans do the same.

In this world, nothing dies without being reborn. Everything adapts.

No-Fear Approach To Thwart Parasites

There is no need to fear parasites, germs, or death. We only need to realize our true Nature, which is always changing in relation to our surroundings. In order to bring balance back to the body, individual countries, and the collective Whole of Humanity, we only need to see ourselves as part of a symbiotic Whole.

There is no single remedy and no single method to healing. The Lyme spirochete is able to [survive a 28-day course of antibiotics](#) when treatment is begun four months after infection. So, the best approach is a multi-faceted approach: 1) support the immune system, 2) reduce inflammation, 3) detoxify, 4) prevent co-infections, 5) use adaptogenic herbs, and 6) rest and nourish the body.

By seeking natural herbs such as Japanese knotweed, medicinal mushrooms, homeopathic remedies, sometimes in combination with conventional drugs used at the outset of infection, you can stop the progression of Lyme and reset the body's self-healing system to reverse the conditions in which parasites thrive. You simply have to understand the parasite's needs and wants as you would your own.

We create our terrain from the inside-out. Healing is an inside-out job. Most medical treatments are outside-in procedures. Parasites show us what is happening within our bodies and our minds. They teach us to identify and work with underlying emotions. They show us what we have allowed to

invade our thoughts and feed off our bodies. Our choices, each moment, determine health or disease, as shown by the endobiont, which adapts with us.

We heal all relationships when we heal ourselves first. When we exchange emotions of fear and emptiness with those of love and wholeness, we achieve harmony. When we let go of people and things that no longer serve us, in favor of those that do, we are complete and whole. Only then do we reclaim our power and come into a state of harmony and balance with our bugs.
