For years already, credible individuals, agencies, and organizations have warned against launching more vehicles into space. For one thing, there's too much space junk out there already and it's creating dangerous and potentially catastrophic situations.

Launching more vehicles is ill-advised for that reason and various others that are equally scary (see [1](#), [2](#), [3](#), [4](#), [5](#), [6](#), [7](#), [8](#), [9](#)) including explosions (see [1](#), [2](#), [3](#)). Recently, a [5G satellite moratorium was issued](#) in South Africa due to interference issues as well.

Unfortunately, none of this has stopped Elon Musk or other tech billionaires from launching satellites or pursuing other business ventures in space. Of course, they are getting funding for some of this [from the U.S.](#) to provide high-speed internet.

Last month actor/comedian/activist Russell Brand produced a 13-minute video about his concerns regarding tech billionaires' space endeavors:

Regarding internet satellites – protests are scheduled for March 19 and 20 (see [1](#), [2](#)). Visit [Stop 5G International](#) to learn if there is an event scheduled near you.

The [majority of scientists](#) worldwide oppose 5G deployment. Cities AND entire countries have taken action to [ban, delay, halt, and limit installation](#) AS WELL AS issue moratoriums. Americans opposed to 5G may [sign this letter](#) asking President Biden and Vice President Harris to stop deployment.
