As we approach the one year anniversary of the novel coronavirus outbreak, we find ourselves facing many unanswered questions.

We find ourselves worse off in many ways, in comparison to when the outbreak just began, as we receive signals from public health officials and the media to prepare for another lockdown.

It appears we are approaching what could to be a perfect storm. The US Presidential Elections, flu season, the arrival of the new experimental COVID vaccine and the prophesied 'second wave' of COVID.

The big news of the week of course, has been President Trump and the First Lady have both tested positive for COVID. The President has been hospitalized.

President Trump's doctor, said that Trump's diagnosis was confirmed using the PCR test. Just like virtually every other 'confirmed case' we hear reported.

But was PCR really developed with the intention of diagnosing

infectious diseases? Is PCR capable of diagnosing infectious diseases? How could a test developed almost 40 years ago be used to diagnose a brand new disease found less than one year ago?

In this report, we examine this questions in addition to reviewing video clips of multiple doctors weighing in on the subject including the biochemist Kary Mullis who invented PCR and won a Nobel Prize in Chemistry for doing so has to say.

Why is understanding the test so important?

Because it is the driving factor in the fear campaign, that is being driven by the corrupt media and then used by the government to justify the restrictions imposed on our lives.

This is a must see report that may change the perception of you, or of someone you may know, regarding the crisis.
