

The Bill Gates Effect: WHO's DTP Vaccine Killed More Children in Africa Than the Diseases It Targeted

[The Bill Gates Effect: WHO's DTP Vaccine Killed More Children in Africa Than the Diseases it Targeted](#)

by [Robert F. Kennedy, Jr.](#), Chairman, Children's Health Defense
April 23, 2020

Anyone defending the Bill Gates/WHO global vaccine program needs to explain this study: [Mogensen et al 2017](#). Prior to 2017, neither HHS nor WHO ever performed the kind of vaccinated/unvaccinated (or placebo) study necessary to ascertain if the DTP vaccine actually yields beneficial health outcomes. The DTP vaccine was [discontinued in the US and western nations](#) in the [1990s](#) following thousands of reports of death and brain damage.

... girls vaccinated with the DTP vaccine—the flagship of Bill Gates's GAVI/WHO African vaccine program—died at 10 times the rate of unvaccinated kids.

But Bill Gates and his surrogates, GAVI and WHO, [made DTP a priority for African babies](#). The Danish government and Novo Nordisk Foundation commissioned this study by a team of the world's leading experts on African vaccination. The two most prominent names, Drs. Soren Mogensen and Peter Aaby, are both vocal vaccine supporters. They were shocked when they examined years of data from a so called “natural experiment” in Guinea Bissau where 50% of children die before age five. In that west African nation, half the children were vaccinated with the DTP vaccine at three months and the other half at six months. Dr.

Mogenson and his team found that girls vaccinated with the DTP vaccine died at 10 times the rate of unvaccinated kids. While the vaccinated children were protected from Diphtheria, Tetanus and Pertussis, they were far more susceptible to other deadly diseases than unvaccinated peers. The vaccine apparently compromised their immune systems. Thanks to Gates, DTP is the world's most popular vaccine.

The researchers suggested that the DTP vaccine is killing more children than the diseases it targets.

For African nations, [GAVI and WHO use DTP vaccine uptake to gauge national compliance](#) with vaccine recommendations. GAVI can [financially punish](#) nations that don't fully comply. The researchers suggested that the [DTP vaccine is killing more children than the diseases it targets](#). It's possible that millions of children are adversely affected. Although the New York Times and other Gates boosters will accuse me of promoting "vaccine misinformation", this is a peer reviewed publication in a respected journal by the world's most authoritative vaccine scientists describing catastrophic outcomes.

Shouldn't we be scrutinizing Bill Gates' record in Africa before we let him dictate which medicines we need to take? By muzzling legitimate criticism as "anti-vax", the media avoids honest debate on many damning studies like Mogensen.
