

The Connection Between Toxic Mold, Parasites & EMFs

[The Connection Between Toxic Mold, Parasites & EMFs](#)

by [Rosanne Lindsay](#), Traditional Naturopath, [Nature of Healing](#)

June 7, 2024

Updated from [February 2022](#)

Living in the material world means an attachment to wireless technology. When does an attachment become an addiction?

Can you do without a cellphone? Watching TV? Scrolling social media? [How much time in a day does wireless occupy?](#) What do you consider [excessive use](#)? Do you experience withdrawal symptoms (moodiness, irritability, depression) by going without? Would you consent to the imposition of technology at the risk of harming your health and potentially all biological life?

Unfortunately, the emotional and physical effects of invisible electromagnetic frequencies (EMFs) are not listed on the package. If you have two or more of the following devices; cell phones, computers, GPS, Smart appliances, electric cars, wearables, and Smart™ TVs, or electric cars, then there are symptoms you may never hear about.

The manufacturer does not disclose that EMFs activate the hidden world of yeast, fungus, mold, mycoplasma, Lyme spirochetes, and protozoan parasites to unhealthy levels in the human body.

The consequence of WiFi is a rise in chronic infections that can be misdiagnosed.

The industries responsible for creating this silent connection

between EMFs and infection fail to take responsibility. The line between what will protect you, [and what will not](#), has never been less clearly defined.

As 5G towers become compatible with [6G, 7G and beyond](#), who is responsible for the consequences?

[Symptoms](#) from exposure to mold toxins include:

- Fatigue
- Weakness
- Muscle cramps
- Headache and pain
- Light sensitivity
- Sinus problems
- Abdominal pain
- Diarrhea
- Joint pain and stiffness
- Cognitive issues
- Mood dysregulation
- Temperature regulation or dysregulation problems
- Excessive thirst
- Increased urination
- Nervous system issues

The user is responsible.

Naturopath Dr. Klinghardt, of the [Sophia Health Institute](#), shared an in vitro mold experiment comparing a mold plate shielded from electromagnetic fields to an unprotected mold plate exposed to ambient electromagnetic fields. The unprotected mold, mycoplasma, and spirochete (Lyme) reacts defensively by releasing more potent biotoxins, and by multiplying more than 600 times. This biological response can be observed anywhere in Nature; it is the desire to survive and thrive. In 2011, the amount of cell phone radiation in a cubic inch of air was several million times higher than it had been a decade before that.

Billions of people worldwide harbor tropical worms and don't know it. They don't know that cell phones and cell towers trigger their activity. They don't know that mold, parasites, and other microbes respond by becoming chronic infections. Medical doctors do not automatically rule out parasites, even though there are over one million worm species, alone, classified as *helminths*.

Helminths take many forms, but all of them harm their host in some way. In humans, they can live in the intestinal tract, urinary tract, [bladder](#), or bloodstream, causing a variety of illness from malnutrition to organ failure" –[Dr. Monica Botelho](#) of Portugal's National Institute of Health.

In endemic regions – predominantly sub-saharan Africa and Southeast Asia – flukes are responsible for the majority of all bladder and liver cancer cases. – Dr. Joachim Richter, Associate Professor at Charité Berlin and co-editor with Botelho.

[Symptoms of Parasites:](#)

Digestive Issues	Gas, bloating, constipation, diarrhea, nausea, vomiting.
Abdominal pain	Upset stomach, stomach cramps, stomach pain, tenderness.
Stool	Greasy loose stool, worms, parasites, mucus, eggs or candida yeast in stool.
Eating	Cravings for sweets, constantly hungry, increased or loss of appetite.
Energy, wellbeing	Feeling tired, fatigue, exhaustion, mood swings, anger and depression, muscle and joint pain, body aches.
Skin	Skin rashes and skin issues such as eczema, hives, rosacea.
Sleep	Poor sleep, insomnia, nightmares, night sweats, teeth grinding in sleep, anus itching at night.
Genitals	Vaginal itching around the vulva, anal itching, rash, vaginal infections.
Overall health	Unexplained weight loss or weight gain, nutritional deficiencies, dehydration, fever.

Parasites Among Us

Worms R us! When in balance, worms live with us in harmony. Out of balance, they can invade and overpower any part of the body, [including the eyes](#).

There are hundreds of large parasites that can enter the body by various modes, take up residence, and cause a variety of life-threatening diseases, including cancer. For worms to make a home in the body, the body must be conducive to their existence. The body is best suited for worms if it is depleted of essential minerals and nutrients, thus *acidic*.

Scientists have known for decades that *helminths* can turn healthy cells into diseased cells. The same is true of protozoan parasites. For instance, Chagas disease is [caused by infection with the protozoan parasite *T. cruzi*](#).

*It has long been established by study of *Ascaris lumbricoides* (phylum and species) in man as well as in laboratory hosts, that the larvae, on hatching in the small intestine, migrate through the liver to the lungs. On the*

eighth to ninth day after infestation, they move farther into the bronchii and then, via the trachea and esophagus, return to the intestine. It has also been shown that the larvae in their migration and development often cause extreme eosinophilia, symptoms such as shortness of breath and cough. –[Naval Captain David P. Osborne](#), chief of surgery, Bethesda Naval Hospital

A search of Pubmed will net hundreds of published, peer-reviewed studies describing *Dirofilaria* in humans, a mere drop in the worm

bucket. *Dirofilaria immitis* is a canine parasite that can infect humans, specifically it is a roundworm, otherwise known as a nematode. For instance, whereas *Dirofilaria immitis* [infects the heart and lungs](#), *Dirofiaria repens* infects the [eye](#).

Patented Transgenic Insects

Dirofilaria, or heartworm, is transmitted by mosquitoes. An egg gets deposited through the proboscis, which is the long, flexible tube mosquitoes use to pierce the skin. There is plenty of evidence showing that mosquitoes are [genetically engineered](#) and [patented](#).

Despite a kill-switch gene, these transgenic mosquitoes [breed in the wild](#). The dire consequence is the [contamination of the native mosquito population](#). Evidence from field trials show that GMO mosquitoes have been [bred for disease resistance for decades](#).

So, why not expect the same for GMO tics and [biting flies infected with agents](#) known to transmit Lyme disease? The CDC acknowledges that [Lyme disease from multiple vectors](#) is on the rise in the US., but offers no explanation and no solutions.

Parasites & Cancer

Tumors analyzed for pathology often come back showing worms

and parasites. Parasitic invasion by a nematode worm is often [mistaken for “cancer” in women presenting with breast lumps](#).

Filarial infection of the breast is not rare, explain the authors. “The larvae enter the lymphatic vessels of the mammary gland, causing lymphangitis, fibrosis, and disruption of lymphatic drainage.” In late, inactive phases, the larvae appear on mammography as serpiginous calcifications. –[Medwire News, 2005](#)

Slowly, the information worming its way out into the public is that parasitic infestations represent the internal conditions called “cancer.” All cancers are, in fact, parasitic infections (with high Candida levels) even if not all parasitic infections present as cancer. [Worms cause cancer](#). based on an acidic tissue environment.

It is no secret that the [American Cancer Society knows](#) that parasites can lead to cancer. Even the [CDC publishes the fact on their website](#) that cases of parasitic infections are misdiagnosed as cancer.

Scientists at the Centers for Disease Control and Prevention have discovered cancer cells originating in a common tapeworm may take root in people with weakened immune systems, causing cancer-like tumors. It is the first known case of a person becoming ill from cancer cells that arose in a parasite – in this case, Hymenolepis nana, the dwarf tapeworm.

The report, in the Nov. 5 issue of the New England Journal of Medicine, raises concern that other similar cases, if they occur, may be misdiagnosed as human cancer – especially in less developed countries where this tapeworm and immune-system-suppressing illnesses like HIV are widespread.

“We were amazed when we found this new type of disease –

tapeworms growing inside a person essentially getting cancer that spreads to the person, causing tumors,” said Atis Muehlenbachs, M.D., Ph.D., staff pathologist in CDC’s Infectious Diseases Pathology Branch (IDPB) and lead author of the study. “We think this type of event is rare. However, this tapeworm is found worldwide and millions of people globally suffer from conditions like HIV that weaken their immune system. So there may be more cases that are unrecognized. It’s definitely an area that deserves more study. – [CDC, November 4, 2015](#)

So why are we always the last to know?

Anti-Parasitic Protocol

In the Age of Information, ignorance is a choice.

Today, more people diagnosed with cancer have taken matters into their own hands and begun sharing information to heal. Their choice of medicine? An inexpensive pet dewormers/antihelminths called [Fenbendazole](#) found at the local pet store. Why don’t doctors tell patients that Fenbendazole is being studied as an anti-cancer drug?

According to sources promoting this anti-worm protocol, [Fenbendazole is a triple-threat to cancer](#): it kills cancer cells in three ways which are significant:

1. It destroys microtubules that sustain the structure of the cancer cell and its ability to divide and multiply rapidly. It interrupts the cancer cells’ ability to process sugar, and cancer cells must metabolize sugar to survive.
2. It boosts the production of a cancer-killing gene called p53, a gene cancer patients may lack. When p53 becomes mutated or can’t keep cancer cells in check, cancer cells can proliferate.
3. The de-wormer also works against parasites, which might be the origin of some cancers.

Before you decide to blame all cancers on worms, realize that helminths are also being used as Immunotherapy (Helminthic Therapy) for [Crohn's disease](#) and for [malignancies](#). In a strange twist of fate, the earthworm's immune system has shown an ability to [kill cancer cells](#) (in vitro). Could it be that a worm's metabolism depends on a [balance of oxygen supply and demand](#) like their human hosts? Yes, indeed.

Is that why oxygen deprivation from EMF fields harm both host and worm?

Add Pulsed EMFs And Mix

The forces in EMFs are caused by EMF radiation, broken down into two categories:

1. High frequency EMF include: x-rays, gamma rays, or ionizing radiation, and
2. Low to mid frequencies include: electric power lines, radio waves, **cell phones**, wireless networks, smart meters, TVs, microwaves, infrared radiation, visible light, or [non-ionizing radiation](#). These are the most dangerous emission, known to cause direct damage to DNA or cells.

Wireless communication (cell towers, phones, etc) is more dangerous because it produces pulsed EMFs. Pulsed EMFs are much more biologically active than are non-pulsed EMFs. When introducing pulsed electric and magnetic fields into a population infested with parasites and yeast, you have a recipe for dis-ease disaster.

Today, the answers are available to anyone who has a curiosity to search the [electronic database of scientific studies](#). Science has well established that [EMF fields incite the growth of fungus, yeasts, molds](#), mycoplasmas, and parasites.

Just as the chemicals and metal constituents of synthetic medications serve as a food source for these pathogens, so

does radioactivity, which serves as an energy source for [making food and spurring the growth of fungus.](#)

Those fungi able to “eat” radiation must possess melanin, the pigment found in many if not most fungal species. But up until now, melanin’s biological role in fungi—if any—has been a mystery. –[Albert Einstein College of Medicine, May 23, 2007](#)

Since May of 2011, the IARC classification for cell phone radiation internationally had been officially [documented as a Class 2B Carcinogen](#). See the Cell Phone [Radiation Emissions Chart](#) from Least to Greatest head SAR level.

BioToxins

Humans are 1:10 human cells to microbes. What affects our smallest inhabitants also affects us. When our microbes perceive an attack from man-made frequencies, they release biotoxins in defense of their lives, even if it damages their host. Sit down before you watch this [freakishly large worm](#) (parasitic nematode) slither out of a dead spider host.

Biotoxins are released from microbial metabolism and die-off. This process drives inflammation in humans. As our microbes struggle to survive, they congest the host’s liver and impair digestion. The liver is unable to produce bile to digest fats which leads to a deficiency of fatty acids and eventually fatty liver disease, unrelated to alcohol.

Our microbes cause stress on the whole body, which leads to “Leaky Gut,” now an accepted term. Leaky Gut gave rise to the previously unknown field of neurogastroenterology, and the disorders of IBD, IBS, and Crohn’s disease. When the gut is “leaky,” microbes and their biotoxins leak into the bloodstream to infect other organs, including the brain, also known as “leaky brain.” In the brain, symptoms resemble depression, anxiety, and other neurological conditions.

Magnetic Fields

Sleep is critical for cell repair and regeneration. When electrical and magnetic fields barrage the body, day and night, the stress hormone, cortisol, is stimulated, which prevents normal elimination (constipation) and detoxification. As cortisol rises, melatonin falls. Sleep is elusive. Magnetic fields also alter the movement of minerals and metals the body. A loss of iron [leads to anemia](#).

In 2005, Extremely low frequencies (ELF) have been documented as a possible carcinogen in [children diagnosed with leukemia](#). More than a decade later, ELF exposures have only increased.

I personally suspect that the exposure to electromagnetic fields in the home and the microwaves from cell phone radiation are driving the virulence of many of the microbes that are naturally in us, and makes them aggressive and illness producing. Shielding patients from EMFs has been a more successful strategy to treating Lyme disease and to get people neurologically well than any of the antibiotics or any of the antimicrobial compounds. -[Dr. Dietrich Klinghardt, MD, PhD, 2018](#)

Solutions

1. EMF Shielding Tools

With the rise of EMF fields a new EMF shielding industry was born. Now you can use the benefits of wireless technology and shield yourself from its health depleting effects using the following tools:

- purchase or make [faraday cages for cell phones](#).
- hardwire your computers with an Ethernet cable.
- Shield smart meters with [meter guards](#).
- Wear Shungite, a mineraloid, or place shungite pyramids around the house. Since they become saturated. you will need to cleanse these stones often.

- Paint bedrooms with EMF shielding paint.
- Use EMF shielding material. Do not use aluminum foil which can shield and also reflect back EMFs.
- [Hardwire a cell phone, and computer.](#)
- [Blue light blockers:](#)
 - Use a blue light blocker covering for all your computer/laptop/tablet screens including cell phones.
 - Use blue blocking glasses when you are working on the computer (this does not protect skin.). Some people will use a blue light blocker (a thin film that covers the screen) and then also a 100% blue blocker of hard thick plastic at night. However be aware that many of the thinner unnoticable blue light coverings on the market do not protect 100% blue light.
 - Download a program (e.g., *Iris*) onto your device that will automatically reduce blue light at night.

2. Cellphone-Free Communities:

If you can live without electronic devices, there are [cellphone-free communities](#) forming. The Intentional Sanctuary Lifestyle Alternative (ISLA), it is located on 40 acres on the Pacific coast of Nicaragua:

Cell phones, WiFi, wireless mice and keyboards, AirPods, smart watches, wireless printers, and all other wireless devices will be prohibited in public and private spaces throughout the property. Interest is growing, and prospective home-buyers have already invested 1/4 of the amount needed to break ground and begin building. There is space for up to 200 homes in the future.

3. Natural Mold and Parasite Detox

If you will continue using electronic devices, know the symptoms of [mold poisoning](#) and [parasitic infections](#). Secondly, prevent infections of mold, yeast, and parasites, by keeping your immune system strong and allowing it to work for you by

acquiring natural infections.

Eat clean, organic foods. Drink clean water, and avoid drinking public tap water, especially if the water tower has 5G technology on top. Seek out natural spring water.

Avoid factory-farmed foods—sugar and processed grains, coffee, chicken, fish, and red meat—which generate an acidic pH in the body. Choose natural medicines vs. synthetic medicines. Seek out natural healers to assist. And be aware of parasitic relationships among your peers. *As within So without.*

If you have a parasitic infection, try adding food grade [diatomaceous earth](#). There are two strong herbs that can kill nematodes. One popular anti-parasitic herb is Thyme. Thyme is a culinary herb, but it also kills hook-worms, roundworms, threadworms, skin parasites and several types of harmful bacteria.

Other natural antifungal/antiparasitic herbs include: Black walnut hulls, high in iodine; wormwood, clove oil, oregano oil, and consider a [cleanse diet](#). For other remedies, consult a natural health care practitioner.

When the worm population in the human body overwhelms the immune system, it is called a *hyperinfection*. At this stage, it may be difficult to kill the worms with herbs unless you eat *clean*. Using frequencies to target parasites through a Rife machine or homeopathic (energy) preparations can directly target parasites in the body, gently and safely. However, the Rife machine does not always solve the problem since parasites can shift their frequency and hide in the body to evade death. A diet and lifestyle change will be necessary by changing your habits to *prevent* the problems of living with EMFs.
