

The COVID Experiment: Are You Covered?

[“Why did Moderna fail to disclose \\$20 million from DARPA for the development of vaccine patent technology being used today?”](#)

[The COVID Experiment: Are You Covered?](#)

by [Rosanne Lindsay](#), Naturopath, [Nature of Healing](#)

April 13, 2021

Why do people who have avoided the annual flu vaccine suddenly trip over themselves to inject an experimental shot? Why do they do it with so many questions left unanswered?

What ingredients are in the shot? What does it offer? Will you be invincible?

What are the known and unknown consequences of an experimental jab? What if something goes wrong?

To answer these questions, in defense of your health, it may be useful to apply Donald Rumsfeld's famous axiom, that he shared during a 2002 [Dept. of Defense briefing](#):

There are known knowns, things we know that we know; and there are known unknowns, things that we know we don't know. But there are also unknown unknowns, things we do not know we don't know. – Donald Rumsfeld, February 12, 2002, U.S. Department of Defense news briefing

If you consent to be a subject of an experiment, are you

covered by your insurance company for any unforeseen damages? Are you in the realm of *Known Knowns* or *Unknown Unknowns*? Or somewhere in between?

I. Identify the Known Knowns:

For many months, mainstream media has announced itself as the gatekeeper of your health information for all things COVID. It first reported that the [Pfizer and Moderna COVID injections do not prevent infection](#) of the Coronavirus. Later, they were [unsure if their products prevented transmission](#). Then an April 2021 study reported that [COVID variants can still infect vaccinated people](#). The story changed again in the same month, "[A new study shows the Pfizer vaccine does prevent transmission.](#)"

This is the realm of the *Known Knowns*, with the caveat that *what we know can shift at any given moment*.

Transmission of what, exactly? Who knows.

For many months, mainstream media has promoted the transmission of a "deadly virus" but failed to mention that the Coronavirus, also known as Covid-19, has never been isolated. In December 2020 investigations, "**no quantified virus isolates of the 2019-nCoV were available.**" [See December 2020 CDC document, page 43](#). The document also mentions that testing for "the virus" is woefully inadequate. Page 41: "This test cannot rule out diseases caused by other bacterial or viral pathogens."

If there is no known virus, and [no accurate test](#), how can there be an effective viral vaccine? Hence, an experimental vaccine!

Could the real threat instead be a bacterium, as Dr. Fauci suggested in a [2008 Journal of Infectious Diseases article](#), about the last major pandemic?

Could the real threat be the advertised cure?

In January 2021, CNN reported, "[Don't be alarmed if people start dying after taking the vaccine.](#)" Is that why [deaths are now soaring in Brazil](#)?

Could the real threat be the Big Three vaccine makers, [Pfizer](#), [Johnson & Johnson](#), [Astra Zeneca](#), whose rap sheets are so long they make the mob look innocent? Moderna claims its vaccine is really "[a computer operating system.](#)" Is that the reason for [more side effects than the others](#)?

For many months, the Centers for Disease and Control and Prevention (CDC) quietly reported on their website that [only 6% of deaths over the last year are due to a syndrome of symptoms called 'COVID.'](#) At the same time, the media and government reported that 97% of people with COVID survive COVID's flu-like symptoms. And all this time, Anthony Fauci never retracted his opinion in the [March 26, 2020 NEJM](#) that "Covid-19 may ultimately be more akin to those of a severe seasonal influenza (which has a case fatality rate of approximately 0.1%)."

Stories are being posted about [Covid-vaccinated people testing positive for Covid](#). There are two possible reasons for this outcome:

1. recipients that wore the mask for months in an attempt to prevent transmission of [SARS-COV](#) just injected that protein sequence into their bodies.
2. Microbes shift to adapt to their surroundings just like humans do. Variants are always expected, especially after vaccination.

It is well known among the vaccine science community that **vaccines cause variants**, just as they did with [Bordetella pertussis](#), a bacterium blamed for whooping cough, which adapted itself to survive the vaccine. In other words, the vaccine ended up diminishing vaccine effectiveness by creating a stronger bacterium. According to the authors of the 2013 [New](#)

[England Journal of Medicine study](#), “adaptation of B. pertussis to vaccine selection pressure.” In fact, [vaccines reduce the body’s innate immune system](#), your natural defense system.

II. Identify the Known Unknowns

Here come the Variants!

Experts say the recent UK B.1.1.7 variant is the most contagious and dominant variant of the virus they cannot isolate. Why do scientists sound an alarm over variants when they know how they are hatched?

It is to get people used to the idea of multiple future *variant vaccines*, which create new variants.

The media message is “Expect to be Sick.”

With what, exactly? Who knows.

Known Unknowns are mixed messages. Contradictory messages serve to maintain a specter of confusion and fear. It is all propaganda. In the U.S. it is legal for the government and the media, working together, to propagandize the American people. See The [Smith-Mundt Modernization Act of 2012](#).

For many months, the government and media set up a plot to coerce U.S. citizens into accepting a new type of vaccine by reporting [a national shortage of COVID shots](#), then [a global shortage](#). At the same time they did not disclose that [COVID shots are experimental, not approved](#) by the U.S. Food and Drug Administration (FDA). An [FDA “OK”](#) is not a formal approval. As of April 2021, [FDA has only approved one antiviral drug called Veklury](#) (widely known as remdesivir) to treat COVID. All COVID injections are only [Emergency Use Authorized \(EUA\)](#). How does protect you? How does it affect your insurance coverage? See Part III

Is COVID a humanitarian or a military operation?

Why did [Moderna fail to disclose \\$20 million from DARPA](#) for the development of vaccine patent technology being used today? Analyze the language used in the media. Vaccine deployment in many parts of the world is used in the battle against COVID. As an example, listen to [this interview with World Health Organization Chief Scientist](#):

*These vaccines are widely deployed..... the benefits clearly outweigh the risks, nothing is 100% safe... We need to watch. We've asked countries to step up their safety surveillance.... But right now the benefit risk profile is clearly in favor of the vaccine.... Ten thousand people a day are dying and the vaccines are highly effective ... ***as effective in people over 65 as under 65**.... We need to be careful. We don't want to be confusing people of causing anxiety. Already there are a lot of people who have questions and are uncertain about the efficacy of the vaccines because they've been developed at record speed we need to reassure people and make sure that vaccines are taken up widely by the population otherwise we're not going to achieve the goals we want to of controlling this pandemic.- Dr. Soumya Swaminathan, W.H.O. Chief Scientist*

*Note: The CDC reports that 8 out of 10 COVID deaths are [reported in people over 65](#).

The CDC and FDA tell you what they are injecting: [Coronavirus Disease](#). Then, in a joint statement, they turn around and tell you not to get the injection due to "rare" cases of blood clots. First [AstraZeneca confirmed](#) a possible link between its shot and blood clots. Since then, [18 countries suspended its vaccine](#). Then, [Johnson & Johnson was targeted](#) and [Wisconsin paused its use](#).

Still, the EU's drug regulator [advises taking alternative experimental vaccines](#). The W.H.O. assures the vaccines are all safe.

While mainstream medical officials such as [Dr. Fauci insist mRNA will not modify a person's DNA](#), the NIH (the organization Fauci is partnered with) [openly admits that it does](#).

Mainstream media publicizes that you should expect to get sick after a injection if your immune system is working properly. Then confuses the message by asking, [If you don't get sick after your injection, does it mean your immune system isn't working?](#) See Part IV for another answer.

While many people *know* vaccines and their adjuvants cause harm, commonly [autoimmune disease](#), a major *Unknown* is that [vaccine companies are not liable for injuries](#) or deaths resulting from their products. In other words, [you cannot sue vaccine makers for side effects or direct effects](#) from their products. Neither will the [government compensate you for any damages](#). So who is responsible for damages?

You, the recipient, assume all the risk.

III. Identify the Unknown Unknowns

If you consented to be part of the COVID experiment, and you experience injuries that require medical attention, are you covered by your insurance policy?

This is the realm of the *Unknown Unknowns*.

India and other countries have been navigating this realm since [December 2020](#):

Contrary to popular perception, existing health insurance policies are unlikely to cover the cost of vaccination and adverse reactions, if any. Only policies designed purely for the Covid-19 vaccination process – there is none at the moment – will cover the costs.

Prior to COVID vaccines, adverse health effects were rarely *officially* correlated with a vaccine. In cases where

adverse effects have been proven, [as with the oral Polio vaccine](#), there are few, if any, payouts in the [private Vaccine Court system](#).

While the CDC advertises that vaccines are “[safe and effective](#),” there have been no investigations on the safety of the entire recommended Childhood Vaccine (Birth to age 18) Schedule. Since 1986, when the National Childhood Vaccine Injury Act was implemented, [no vaccine safety reports have been filed](#) by the Dept. of Health and Human Services, as required by the 1986 Act.

If insurance companies decide to cover COVID-related adverse effects, their policies will be limited in scope and duration. Currently, in India, there are special cases for Covid-19 only claims, with 3.5 months, 6.5 months and 9.5 months coverage. [In Korea, health insurance coverage for COVID is offered as a separate policy](#) and expires after one year.

Have you contacted your insurance company to ask the million dollar question?

Remember, COVID shots are not FDA-approved. Insurance companies are not inclined to enter into a money-losing proposition. Hedging their bets is one way for insurance companies to avoid paying for *the ultimate cost*. But isn't *the ultimate cost* why people buy insurance in the first place?

If you approach your insurance company to pay for something outside a preexisting condition, expect to answer their question, “Have you ever had a COVID vaccine?”

IV. Healing Yourself

This message is not publicized by mainstream gatekeepers. There is no need to be confused by mixed messages or feel threatened by invisible viruses. There is no need to fear *any* microbe when your innate immune system is your built-in defense to protect your health. All it requires is a strong

foundation.

Your immune system is your direct line to self-healing. And it does not lie. But it can be compromised by fear. A strong immunity means a healthy mind and a healthy body. When you feel sick, your body speaks to you in the language of symptoms. Symptoms indicate that toxins have compromised your defenses and activated your innate immune system. Symptoms indicate your immune system is in perfect working order. Listen to the wisdom of your body. You are your own healer.

Symptoms merely show you where you are out of balance and that your body requires your support to reverse the damage. All dis-ease is one disease, called [*Toxemia*](#), an abnormal condition associated with the presence and storage of toxic substances in the blood. To further suppress your symptoms is to push the problem deeper and create a bigger problem that will eventually rise up to announce itself, when you least expect it. To heal the damage is to help the [*body express, or push out*](#), the toxins and bring you back into balance.

Truth is simple because truth is individual, as individual as your immune system. Your truth is not someone else's truth, so no need to argue over the definition of Truth. Balance is the key to health. Balance is reflected in the Nature of each individual. Since each of us is unique, unlimited options exist in the realm of self-healing. You can choose to work with a system of gatekeepers or you choose to work on yourself, guided by a natural health practitioner.

Knowing the whole story, the most important question to ask yourself? If drug and insurance companies do not stand behind their experimental products, why should you?
