Richard Dolan – The Scientific Case for Sasquatch. Jeffrey Meldrum Ph.D. (Jan 14, 2019)

Richard Dolan is one of the world's leading researchers and writers on the subject of UFOs and believes that they constitute the greatest mystery of our time. He is the author of two volumes of history, UFOs and the National Security State, both ground-breaking works which together provide the most factually complete and accessible narrative of the UFO subject available anywhere. He also co-authored a speculative book about the future, A.D. After Disclosure, the first-ever analysis not only of how UFO secrecy might end, but of the all-important question: what happens next?

Dr. Jeff Meldrum is a Full Professor of Anatomy & Anthropology at Idaho State University (since 1993). He teaches human anatomy in the graduate health professions programs. He is co-editor of the volume, "From Biped to Strider: the Emergence of Modern Human Walking, Running, and Resource Transport." Dr. Meldrum is best known for his research into Sasquatch, aka Bigfoot. His lab contains well over 300 footprint casts attributed to this mystery primate. For his full bio see <https://www.isu.edu/biology/people/fa...>
