

The Variant and the Vaccine

The Variant and the Vaccine

by [Rosanne Lindsay](#), [Nature of Healing](#)

May 10, 2021

For every action there is an equal and opposite reaction. – Newton's Third Law

For every good reason there is to lie, there is a better reason to tell the truth. – Bo Bennet

For every variant there is a vaccine.

For a year beginning in March 2020, no one died of natural causes anywhere in the world. Everyone died of COVID19.

Then, after the COVID19 vaccine rollout began, the elderly began dying in nursing homes of [natural causes](#).

If you start looking at where the deaths are occurring post-vaccination, you find that they're mainly in nursing homes," – [Arnold Mondo, professor of epidemiology](#) and global public health, University of Michigan

The [media says](#):

"Experts are sure that the U.S. has not reported any deaths caused by COVID19 shots."

Why haven't vaccine-induced deaths been reported in the U.S.?

[As the press](#) puts it.... "They suddenly crash.... The people who die from COVID-19 are probably dying from many different causes."

Is it now possible to die from COVID and many different causes, at the same time?

The expert statisticians who are paid to know how to calculate the results of all the COVID testing that took place, call the deaths, “unexplained.”

Thousands more people are dying than we would normally expect in normal times... “There’s not enough information to know whether this is under-reporting of Covid or whether this is ‘collateral damage’ as a result of the lockdown.” – [Dr Jason Oke](#), senior statistician in the Oxford University Medical Statistics Group

What about the warnings of collateral damage that could result from an experimental vaccine? From November 2020:

One warned the “collateral damage” of introducing a less than “safe and effective” vaccine could exacerbate the world’s “current problems insurmountably.” – [Alexandra Thompson, UK news](#)

The goalposts keep changing because scientists claim that viruses mutate into variants that only they can identify.

How do you capture a moving target?

You don’t!

The spin about variants is doctored by the media much like a casino controls its slot machines. As gatekeepers, they hold all the cards:

The system is designed to be random within a range of percentages. The software decides when and how much to pay but won’t go over the monthly limit. It should be obvious that this limit could be reset.

The terms of COVID keep changing because the cause,

currently Coronavirus, is only visible to the “experts” who write the rules. The current experts are unknown groups at the Centers for Disease Control and Prevention (CDC), which Control the narrative to Prevent you from understanding the true cause and the true risks.

[According to the CDC](#), the most at-risk group for deaths from COVID is seniors. Yet, it is also the [CDC that urged seniors to be the first to be injected](#) with an experimental vaccine. The media dutifully puts out the message:

In December 2020, CNN warned viewers to expect an increase in deaths after the vaccine:

We would not at all be surprised to see, coincidentally, vaccination happening and then having someone pass away a short time after they receive a vaccine.

One of the things we want to make sure people understand is that they should not be unnecessarily alarmed if there are reports, once we start vaccinating, of someone or multiple people dying within a day or two of their vaccination who are residents of a long-term care facility. That would be something we would expect, as a normal occurrence, because people die frequently in nursing homes.

Shortly after that warning, in [January 2021, CNN reported](#):

You can still get COVID19 after getting the vaccine.

[Experts now suggest](#) that seniors could be dying of a mutation of COVID19 called a variant. Before you can say another experimental vaccine, [vaccine makers are now looking](#) for ways to attack variants via a vaccine.

The Spin

If you have extreme symptoms, including death, then [your](#)

[immune system is over reacting](#). Once upon a time, doctors and the CDC warned of “adverse health effects” from drugs and vaccines. Adverse health effects were tracked and reported to a medical professional to be catalogued by the Vaccine Adverse Event Reporting System (VAERS). However, today the message is reversed. If you are experiencing adverse effects of the experimental vaccine, [then the vaccine is working well!](#)

They are going to know they got a vaccine. They are probably not going to feel wonderful. But they've got to come back for that second dose. – [Dr. Sandra Fryhofer](#) of the American Medical Association

Experts say that those previously infected with COVID19 may have [“worse side-effects from the vaccine.”](#)

There have been some anecdotal reports of COVID survivors experiencing more severe side effects – feeling achy, sick or even feverish – after the first dose of vaccinations. – [David Wohl, an infectious disease physician](#) at the University of North Carolina

Today, the media reports that [seniors are still dying from COVID19 despite efforts to vaccinate them.](#)

Despite or as a consequence of...?

As people begin to experience adverse health effects from experimental vaccines, the [CNN narrative changes:](#)

Anti-vaccine groups are exploiting the suffering and death of people who happen to fall ill after receiving a COVID shot, threatening to undermine the largest vaccination campaign.

To understand previous failed vaccination campaigns, see [Operation Warp Speed](#), To ponder the purpose of predictable pandemic campaigns, see [Reengineering Humanity](#).

What remains “unexplained” in the current pandemic are answers to the following questions that the CDC has not elucidated:

1. If people have already been infected with Covid19 and recovered (at a rate of 99%) then shouldn't they acknowledge their innate immune systems, which accomplished the job of immunity without an experimental treatment?
2. Why were experimental vaccines rushed to market, without FDA approval for emergency use when we have entered the recovery phase?
3. Why did the vaccine treatment [skip early stage testing, receive no peer-reviewed late stage testing?](#) Why is there no data on vaccine trials? Why will COVID trial study data not be released until the year 2023, or never?
4. If the mRNA experimental treatment is “[gene therapy](#)” then does it set up autoimmune disease, and worse?
5. [Will life insurance companies insure people](#) for participating in an experiment?
6. Why are [pharmaceutical companies immune from civil liability](#), and cannot be sued for damages resulting from their products?
7. Why is [CNN pretending it didn't warn everyone to expect more deaths](#) after taking the vaccine?
8. Why wear a mask to prevent transmission of the COVID-SARS2 only to inject yourself with it later?
9. COVID19 or BS19?

Know The Risks

Scientists allege that there are [more than 200 different varieties of cold viruses](#). This is because viruses continually mutate to become variants, as is their nature, over millennia.

COVID comes from the family of Coronavirus ... i.e., the common cold and/or flu. However, [there is no vaccine for the common cold/flu](#) and there never has been. Why? Because symptoms of

colds and flus are expressions of detoxification from your body's immune system to bring you to recovery.

[Studies on people who were exposed to Covid and then recovered](#) have shown that their antibodies remained pretty stable, and only dropped "modestly" after six or eight months. Another promising outcome: coronavirus-specific B and T cells (which work together to remember and destroy infections) also appear to increase and remain high after infection.

What about the risks from experimental vaccines?

A [recent study published in the journal PLOS Biology](#) was presented by some [media as claiming that certain vaccines make viruses more dangerous](#). A study from 2001 published in the [Journal Nature](#) stated the same thing.

Not widely publicized, the COVID-SARS2 vaccines can [increase your risk of "breakthrough infections,"](#) while continuing to test positive for COVID and variants. And [Israeli study showed](#):

Interestingly, the evidence showed that these breakthrough infections with the B.1.1.7 variant occurred slightly more often in people after the first vaccine dose compared to unvaccinated people.

They identified nearly 250 instances [out of 800 tests] in which an individual became infected with SARS-CoV-2 after receiving their first vaccine dose, meaning that they were only partially protected. Almost 150 got infected sometime after receiving the second dose.

In fact, in a recent report in the [New England Journal of Medicine](#), NIH-supported researchers detailed the experiences of two fully vaccinated individuals in New York who tested positive for COVID-19. Could the reaction be a reinfection

based in Newton's 3rd law where every action has an equal and opposite reaction? Inject the infection, get the infection?

The Virus and the Exosome

A rose by any other name would smell as sweet. – William Shakespeare, play Romeo and Julie

*The virus is fully an exosome in every sense of the word.
– [William A. Wells Journal of Cell Biology](#)*

Viruses are produced within each cell and cannot survive on their own. Viruses are not organisms. Therefore, they are not contagious. You cannot “catch a virus.” Viruses are really self-cleaners known as [exosomes](#).

Demonizing exosomes is the lie that explains the [dangers of the flu vaccine](#) and the failure of the annual flu vaccine program, year after year. It explains why the Germ Theory is only a theory, and does not exist in reality. Exosomes are cell-made to detoxify the cell. When they leave the cell, they die. Exosomes are part of each individual's innate healing system.

For every good reason there is to lie, there is a better reason to tell the truth

Your immune system creates viruses as exosomes and then your body expresses them, job done! Your risk of ever “catching a virus” is zero, unless that virus is embedded inside a tissue specimen and injected into your body, bypassing your innate immune system.

Get ready! Each new variant, determined by the CDC, will come with its own vaccine.

Remember, when it comes to all vaccines, there is no liability to pharmaceutical makers or doctors, no informed consent to patients, no insurance coverage for experimental procedures,

and no COVID study data to prove effectiveness, or lack thereof.

You, the recipient assumes all the risk by your consent.

When it comes to the variant and the vaccine, you are asked to make a choice: will you be part of the experiment or part of the control group?
