January 19, 2019

January 19, 2019, marks the two-year anniversary of the demolition of Iran's 15-story Plasco Building and the murder of 16 firefighters and six civilians who were inside the building at the time of its destruction.

As with the Twin Towers and World Trade Center Building 7, a false narrative of the building suddenly collapsing due to fire was successfully promulgated immediately after the incident and was subsequently reinforced by a fraudulent government report.

Upon reviewing videos of the collapse and observing the improper rush to judgment about what caused it, we at [Architects & Engineers for 9/11 Truth](#) determined that it was our ethical responsibility to bring our expertise to bear on this matter as well.

We therefore set out to prepare a report that was as comprehensive as possible in as short a time as possible in hopes of helping bring about an unbiased investigation into the causes of the tragedy. On February 20, 2017, we released this preliminary assessment.
