I was told about the work of Craig Paardekooper by my friend of many years, PhD bio-chemist Dr. Dave Rasnick a few days ago; Today came this email from Dave, clarifying his shocking findings:

“ I’m following the very important work of Craig Paardekooper at Kingston University London. Recently, I introduced Craig’s work to our email group.

<https://www.bitchute.com/Craig-Paardekooper/>

Three of his conclusions:

- The companies purposely manufactured non-uniform formulations of their vaccines while representing to the public that all COVID-19 vaccines from a given manufacturer were uniform in their formulation.
- Over 20,000 different batches (lots) of Pfizer, Moderna, J & J injections total.
- 1 in 200 lots contain deadly ingredients. He urged me to watch a series of videos, in which he lays out the unthinkable. One video [here](#):

Another, "Death By Alphabet: Moderna Batch Codes And Associated Deaths:" [here](#)

"Please share with those you know, and also with doctors, nurses and teachers – who may soon be pushing the vax onto children. Doctors and nurses need to see that some batches are 50 x worse than others – before they prescribe them."

–Craig Paardekooper, Telegram

"How Bad Is My Batch?" App and website [here](#).

"Moderna Used the Alphabet to Label Different Toxicities of Vaccine.

Moderna batches belong to two main groups – 20A or 21A – the 20A group is much more toxic. In fact all of the batches producing more than 1780 adverse reaction reports – all of those batches have batch codes ending in 20A."

"I ranked all the Moderna vaccine batches in order of the number of deaths caused, and used the data from the highest 180 batches as my data set.

As shown in my previous videos, Moderna batches have an alphabet letter in the centre of their batch codes..."

I called Dave Rasnick, just now.

How did you *find* this guy? I asked.

"I just stumbled upon it," he said. "Every morning I spend an hour or two going to the usual places, I go to, to find information. Last week or something I came across one of his talks. Odyssey or something. And then found his website. He had done a series of videos. These analyses are of the US VAERS data. That's available to anybody. There are huge number of reports in VAERS. What he has done is that ...the guy must have a lot of time on his hands because VAERS is a pain in the ass to use normally. There's almost a million reports now on the Covid injections...from this guy I learned there are 20,200 batches. That includes all 3— Pfizer, Moderna, and Janssen. He has done an analysis by batch number. One batch has about 20,000 jabs. There are 20,200 lots numbers. We know there are billions of these already ordered and shipped. The important thing is that it's a *huge* data base. He has correlated over time the reports of the severity of the jabs over almost a year now."

Dr. Rasnick described how Paardekooper charted a roller coaster of adverse events patterns, not random, but highly variable. They went up and down, forming patterns. "He was able to show that they had done a dosing regimen where the earliest ones had highest toxicity, some a lot less toxic...This

is exactly what any scientist wants to see, this volume of data. These companies are working in *concert* so they did not interfere with each other's results. The toxicities are very specific, and they come sequentially."

"All of that non-randomness was the key. As soon as you see that... if I was on a jury I would convict those people of grievous bodily harm and willful homicide."

I asked what he knew about Paardekooper.

"He's not a PhD yet," Dr. Rasnick said. "He's at Kingston University, in London. We've had exchanges, he answers my emails promptly. He reminds me of...well, he's not beholden to anybody. I knew something like that could be done if somebody had all that data. It's a huge, extraordinary effort. If it was only a few thousand data points that would be one thing, anybody could do that, but this is about a million data points. Batch codes and toxicity. The December 4th video, that's the one that shows coordination."
