

Vaccines for Profit and Destruction

Source: Jon Rappoport's Blog

by Jon Rappoport

April 3, 2019

“Whatever else modern medicine has wrought—and it has given birth to some impressive technical fixes and pinpoint trauma care—it has produced an unprecedented transformation of society into a universal hospital. Medicine, Rockefeller motivated, makes disease, and then treats what it has made. There is no other commercial operation on the planet that exceeds its reach or profit. Create an endless problem, and then pretend to solve it: that is the secret mission. Make the solution a new problem begging for more answers: that is the strategy. Reduce vitality and life-force: that is the objective. Control of the disabled is far easier than control of the robustly healthy.” (Notes on Vaccines, Jon Rappoport)

I point your attention to a recent riveting article, [*“Vaccines: Gateway Drugs by Design,”*](#) at Robert Kennedy, Jr.'s World Mercury Project. The author of the article is Kristina Kristen.

Kristen lays out a case for drug companies as creators of disease, via their childhood vaccines—which diseases they then treat with their own hugely profitable drugs. A closed circle.

Key quotes from the article:

“The main vaccine producing companies, the ‘BIG 4’, Merck, GSK, Pfizer, Sanofi, who make all our children’s vaccines, list the very illnesses now seen in epidemic numbers in our

children, in their own vaccine inserts, as potential adverse effects.”

“The drug ‘treatment’ side of the equation, which is substantially more lucrative than the ‘gateway’ vaccine side the BIG 4 already monopolized, now also increased substantially. The vaccine manufacturers began to capitalize on the known adverse effects of their vaccines, and have since created drugs for the ‘treatment’ side of the equation as well. The lack of incentive to make safe products, which created the bloated vaccine schedule, became the gateway to the lucrative drug treatment side for these companies. Today, the BIG 4 monopolize vaccines as well as the drug ‘treatments’ for chronic illnesses known to be induced by vaccines. First, vaccines push kids off the cliff, and then vaccine makers profit from ‘rescuing’ those they don’t kill.”

“It is NOT A COINCIDENCE that the same BIG 4 companies, GSK, Merck, Sanofi and Pfizer, the largest manufacturers of vaccines in the U.S., happen to also produce the top grossing drugs that treat the most common side effects from their own vaccines: Autoimmunity, asthma, anaphylaxis, allergies, ADHD, rheumatoid arthritis, epilepsy, etc.”

“Vaccines, in fact, make up the foundation of the BIG 4 trillion-dollar drug skyscrapers [companies] built on treating the chronic illnesses they KNOWINGLY create with their vaccines (again, the adverse effects are written in their vaccine inserts).”

One example among many: Advair, a drug for asthma, manufactured by vaccine giant GSK, which brought in \$4.36 billion in sales, in 2017. Asthma is a common effect of childhood vaccinations.

Author Kristen is documenting the charge that medical drug producers are essentially creating the diseases they then “treat” with their own medicines.

From my own experience with hospitals and doctors, I can say that, for the most part, medical personnel are unaware of any possible connection between vaccines, childhood diseases, and drugs purportedly designed to reduce the effects of the vaccines. These doctors and nurses would never believe there is a closed circle based on profits.

But there is more. The drugs used to treat the adverse effects of vaccines cause their own expanding disease outcomes—and then new drugs are developed to treat these illnesses.

The federal government, in collusion with media networks, has covered up the disastrous death numbers resulting from medical care. For years I've been documenting the research that reveals those numbers. For instance, see ["Is US Health Really the Best in the World?"](#) This review was written in 2000 by Dr. Barbara Starfield, at the time a revered expert at the Johns Hopkins School of Public Health. It was published on July 26, 2000, in the Journal of the American Medical Association. Starfield concluded that, every year in the US, the medical system killed 225,000 people. That would be 2.25 million deaths per decade. [In a 2009 interview](#), Starfield told me that 225,000 was a conservative estimate...
