December 18, 2020

What actually happens: Macrophages (MFs) transport Al adjuvant particles into the brain:

Our vaccination programs are not based on complete science of the ingredients or long term health impacts. Our children have been suffering as a consequence. CDC and other agencies are now pushing for increased adult vaccination schedules. Their goal is pre-cradle to grave vaccination for all.

And none of it has a foundation in science. All of it ignores the concerning independent studies about risks, and all of it ignores the current understanding of human immunity and the symbiotic relationships that support it.

Please see this article for references: [Vaccine Aluminum Travels Into the Brain](#)

And these peer-reviewed papers on aluminum exposure from the pediatric schedule:

- [Acute exposure and chronic retention of aluminum in three vaccine schedules and effects of genetic and environmental variation](#)
- [Reconsideration of the immunotherapeutic pediatric safe dose levels of aluminum](#)
- [Relative Incidence of Office Visits and Cumulative Rates of Billed Diagnoses Along the Axis of Vaccination](#)
