

Weaponizing Frequencies: The Coming Tidal Wave

Source: [Natural Blaze](#)

by [Rosanne Lindsay, ND](#)

Psychotronic millimeter wave weaponry is coming to a street near you, with the potential to unleash disease on a mass scale. Welcome to the new fifth generation of wi-fi called 5G, where the speed to send full-length, high definition movies to your iPad is ten times faster.

The Consequences

The *need for speed* has the consequence of going from moderate to severe health effects in record time. Note that 4G operates at 2.5 GHz or oscillates about 2.5 billion times per second. This frequency mimics water molecules in your body, and was chosen

specifically for broadcasting services and equipment under government license. This means that all company products must meet this frequency or be deemed illegal. For what purpose is matching the human body's frequency, you may ask, other than for weaponization? Good question.

The higher frequencies of 5G – 100 GHz and beyond – will use small-scale wireless refrigerator-sized boxes, placed in front of every 2-10 homes on every street, in every city. As you watch the latest Hollywood flick, you will bask, unaware, in microwave emissions that oscillate at the same rate as your

blood and oxygen molecules. These frequencies can cause burning sensations on your skin, impact fertility, as well as alter the electrochemical waves of your brain to affect consciousness.

Awaiting Installation of 5G

Secret testing of 5G emissions made its debut during the [2018 Olympics](#), and then again at the 2018 [Super Bowl](#) where over 67,000 people were part of a stress-test without their consent. Soon, the 5G antennae networks will be [beta tested in nineteen U.S. cities](#) including San Francisco, Los Angeles, Jacksonville, and San Jose. High frequency 5G signals travel shorter distances and are easily blocked by buildings and trees. What is the point? Why create new technology that takes humanity in reverse? No time for answers. It's full steam ahead to remove the obstacles that block the signals.

First the trees.

Directed Fires And Poisoned Trees

Many people in California report that the extensive “weird

fires” are destroying trees and leaving homes untouched. Everything does not burn. At other times, the [metal of cars and rails burned with the leaves on trees](#), leaving tree trunks and kindling. Could these unusual fires be the result of lasers from [Directed Energy Weapons](#)? Whole forests have been devastated down straight lines, obeying fence lines. Add to that, the sanctioned [poisoning of hardwood trees](#) by timber companies that has led to over one million dead trees to create a fire hazard.

Are the trees being destroyed merely to unblock hazardous signals? Is this treason/tree-son on multiple levels? These same millimeter waves have been used by the U.S. Army as a crowd control dispersal weapon called [Active Denial Systems](#). Firefighters in Sacramento have reported [memory problems and confusion](#) following the installation of new towers outside the city fire station. Some cities, including Santa Rosa, have halted their 5G plans while health concerns are addressed.

Tree Towers

The power of trees keep us calm by acting on our autonomic nervous system, as well as our spirit. Numerous studies show a dose-response relationship between [urban tree cover density and self-reported stress recovery](#). [Studies](#) show reduced physiological markers of stress in subjects simply looking at images of nature.

Unless we can stand up, speak up, collaborate and network, we risk being victims of the attack coming at us unseen, as

millimeter waves are directed at our bodies and minds. If we feel powerless and isolated now, imagine what it will feel like once the new networks are installed and operational. Imagine what it will be like when the trees are replaced with towers that look like trees. We only feel isolated when we work alone and isolate ourselves. Like a forest, there is strength in numbers.

[Camilla Reese](#) of [Electromagnetichealth.org](#) says we are facing actions at the federal and FCC levels that will create a dense network of high-intensity 4G and 5G microwave radiating cellular antennas in front of homes across America. Moreover, federal legislation, S 3157, would severely reduce local revenues, shorten review times for applications and curtail local control over siting of cell towers. Camilla says the movement to stop this rollout is necessary for health but is also about getting corporate money out of politics and building an independent media not dependent on toxic polluters and the corruption driving it.

Health Effects of 5G

Because 5G frequencies affect oxygen molecules, they affect all biological systems, including DNA, circadian rhythm, heart function, hormonal regulation, and immune system. [Hundreds of scientists have expressed concern](#) that humans may experience serious health risks including increases in blindness, cataracts, retinal degeneration, hearing loss, male infertility, cancers, peripheral nervous system damage, impacts on immune cells, red blood cells leading to low cellular oxygen, and impaired transport of nutrients into cells. Impacts on birds and plants may be more severe than the impacts on humans.

Beyond direct effects to health, harmful frequencies threaten society as a whole by ignoring the human right to informed-consent to high levels of radiation. All life on the planet

has a right to health and a healthy life. By accepting the 5G rollout without a discussion, as happened with the airport scanners, we give up sovereignty over our bodies and accelerate our demise. These frequencies ionize metals being sprayed into the atmosphere under military “geo-engineering” programs to charge the atmosphere, along with our bodies. These programs further block the healing frequencies of the sun required by all life.

S 3157 has bipartisan support and currently faces little opposition. It could slip through the Senate via unanimous consent, appear in the House briefly and get attached to a spending bill – without any debate or roll-call votes specific to S 3157. This would wipe out nearly all the protective ordinances already passed by forward-looking cities.

On September 26, 2018, the FCC is scheduled to vote through its Wireless Infrastructure Order (dockets 17-79 and 17-84). This order attempts to preempt local control of the public rights-of-way. Wireless companies could then more easily install – in front homes – cell towers that would irradiate those nearby with intense, pulsed, data-modulated, Radio-frequency Electromagnetic Microwave Radiation (RF-EMR) – 24/7.

Some Solutions

- Voice the power of NO to all new generation wi-fi systems without proven safety.
- Hardwire all electrical connections or unplug wi-fi before sleeping.
- Use aluminum screens on windows to block EMF signals.
- Use RF-shielding paint to block EMF signals.
- Consume Carbon60, a powerful antioxidant, metal absorber, and carrier of metals out of the body.
- Unsubscribe to the genetically-modified corporate food system.

- Eat an organic diet to strengthen and maintain your immune system.
- Come together in small communities to maintain simple wi-fi for the benefit and balance of the group.
- Grow your own food. Plant a garden. Grow herbs and fruit trees.
- Stop using aluminum cookware, antiperspirants, baking powder, vaccines.
- Remove the outdoor refrigerators from your sightline.

In usual form, attacks to human health and the health of the planet are coming from new technologies that are unproven, untested, and amoral. Though government attempts to divide humanity, we are all Earthlings united at the level of our cells and our microbes. Do we slow down and preserve our smallest inhabitants? Or do we accept the coming tidal wave? Speed for the sake of speed is the ideology of a cancer cell.
